There had been left upon the island when all had gone in '55 an assistant Commissary Storekeeper, Mr. Stewart,<sup>329</sup> with a few of the better convicts to look after things till the Pitcairners arrived. And did ever colonists in the whole history of the world find such gift awaiting them. The Home Government was not going to do things by halves. Here is the record : 81 Buildings, in perfect condition, including homes, chapel, schoolroom, hospital, workshops and mills : household furniture in each home : 1300 sheep, 430 cattle, 22 horses, 10 swine, innumerable fowls : 45,500 lbs. of biscuit, maize, flour, rice and groceries : 16,000 lbs. of hay : 5000 lbs. of straw : with 6 months' supply of potatoes and peas coming fast from Sydney. Besides all these, there were ploughs, harrows, carts and garden tools. They found the land tilled, roads made, rivulets bridged. None of the pioneer's hardships for this community. It stands alone, in our history, as a monument of the old Mother's love for her far off children.

The Pitcairners landed on the 8<sup>th</sup> of June 1856, a Day of Remembrance for Norfolkers for all time. They were amazed. “Everything astonished us : the size of the houses, the great height of the rooms, the number of cattle, the oxen yoked to the carts.” They had never seen horses before, and the implements and tools were a nine days wonder.<sup>330</sup>

The orders were for each family to be provided with a house and to get a share in all the supplies, the overplus to be kept as the property of all, to be later shared out, or sold outside for the benefit of all. A few days passed, things were set running : then the Herald, the Juno and the Morayshire up anchor and away. The Pitcairners were left alone save for the corporal's guard of assistants, in their new possessions. They had arrived.

“We are very busy. Some of us are having lessons from those left to help us in ploughing, milking, sheep shearing and grinding corn.” They soon learned how to ride those horses. One of their first acts was to plant their much loved Kumera or sweet potato. Nothing was quite so good as that. It is their food today.

Those grim walls and gaols could not fail to impress those simple souls. One writes “Think of us in the Church which had formerly been occupied with the outcasts of society, then imagine us in the graveyard filled with mounds that contained hundreds of their bodies. I went through the prisons, no

<sup>329</sup> Thomas Samuel Stewart

<sup>330</sup> Nine days wonder: a novelty that loses its appeal after a few days.

sound was there. It was harrowing to be continually stepping on bolts and shackles, and requiring much strength to swing on their hinges the ponderous doors of cells and dungeons. It seemed to me that here, even the very air was forbidden to enter.” To the Chaplain those gruesome sights must have recalled his own working in the chain gang on the batteries of Callao, and his own near call to stand before a firing party, as many a fellow white man had done within Kingston’s walls.

### **The Land Question**

As to the land itself, a fruitful source of discussion to this day, though the matter has been finally settled by special Act of Parliament, we face the following facts. The instructions from Home read to divide all the land already cleared among the different families, with reserves out of it for Church and School purposes, and for landing places. Of the uncleared land, 500 acres were to be reserved, the remainder to be divided up. But the Pitcairners would not have it so. They preferred to cultivate the land in common. They sought complete isolation but thereby they lost their chance of it. They were offered the whole land, each family a legal title to its share. They turned the offer down. It was inevitable that others should step in to make use of what that small community could not possibly handle, though they might have warded off the danger by taking up the whole in legal way.

The Governor at Sydney was not satisfied. He came himself in ’57. As they had refused the offer of the whole land, he ordered each head of family to select an allotment, as in Nicolas’ letter, not to exceed 50 acres, and with it went a set portion of the livestock, seed and tools, which alike as with the land they had preferred to hold in common and not divide on landing. He made it an order also : (a) that the owner of the 50 acres could not sell to anyone who had not received permission from the Governor at Sydney to reside upon Norfolk Island; (b) if the owner left the Island, he could only sell to an inhabitant; (c) if no purchaser was found, the community as a whole could buy it; (d) no “outside” land could be purchased by a stranger who had not first obtained permission from the Governor at Sydney to reside upon the Island.

### **The Homesick**

And now, the first flush of the new conditions over, those nigh two score who had held out against removal, began to look over the sea to the land of their birth. They seemed unable to overcome their regrets at having left. Nothing compensated for what they had left behind. They were homesick. In ’58 the first lot went, sixteen in number, who hired a schooner, and despite the wrench of parting with the rest, sailed back. To anticipate : in ’63 there was another stirring up in the hive, and thirty went. The names of the forty-six were those of four of the families : Christian, Adams, Young and McCoy. They number one hundred and seven today. There are no other original names there. They are Pitcairners indeed, and when the aged Pitcairners on Norfolk shall have passed away, the name will still live as long as Pitcairn’s Island is above the waves.

This action of the homesick ones nettled the Governor of Sydney sorely. The question of the Melanesian Mission getting a footing on the Island had been mooted by Bishop Selwyn, and stoutly opposed by the Governor, who still wanted, if any way possible, despite the foolishness of the new arrivals, to keep Norfolk Island wholly for them. Now he withdrew his protest. Let them come : and himself went again in ’59 to Norfolk and bluntly told them that those who had returned to Pitcairn,

and any others who might be so foolish as to follow, lost all claim to their original allotment of 50 acres. He added that all the land, other than the original allotment to each, was the property of the Crown — they could in no way touch it — and that all buildings, livestock, tools and stores that had not been apportioned as he had ordered in '57 were, for the future, property likewise of the Crown. Doubtless he had legal standing for the latter statement, but it seemed and seems contradictory to the first 'Instructions'.

The Chaplain was up in arms. To his old friend Moresby he wrote : "We are plainly told that nothing whatever beyond our 50 acre allotments belongs to us. Surely it was not with this understanding we left Pitcairn." But was not the fault largely, if not wholly, their own? They had thrown away their chance. Nicolas had written that the whole land could not be ceded to them, yet its use had been offered and refused, and had told them also that, for the present, no others should settle amongst them. They could have blocked the stranger, but refused the act that would do it.

Out of the Crown lands, provision was made for free grants of 25 acres to each Pitcairner on contracting marriage. Later this was reduced to 12½ acres to each party. Later still no grants were made unless a certain amount of improvement had been made. Finally, in the day of the Norfolk pure and simple, no further free grants were allowed. The original grants issued by Sir William Denison, Governor of New South Wales, in 1859, after a survey by Sappers and Miners stationed then at Sydney, show the relative strength of the families : to the Quintals 12 : the Christians 8 : the Buffets 6 : the Adams 5 : the Evans 4 : the Youngs 4 : the Nobbs 4 : the McCoys 2. But today the leading land holding family is that of Nobbs, the Chaplain.

## A Crown Colony

It was the 8<sup>th</sup> of June 1856 that the Pitcairners landed. On the 24<sup>th</sup> June 1856 Norfolk Island was separated from the jurisdiction of Tasmania and made a Crown Colony, with the Governor at Sydney in control. What a difference of scene on that latter date. On little Norfolk, all unconscious of what was transpiring in the Mother Land as to their fate, a band of newcomers feverishly at work, getting used to the new conditions : and in London this, it is readily visualized :

At the Court of Buckingham Palace, the 24<sup>th</sup> June 1856.

Present

The Queen's Most Excellent Majesty

H.R.H. Prince Albert : Duke of Wellington : Lord Panmore : Earl Clarendon : Viscount Palmerston : Sir George Grey : Sir Charles Wood : Mr. Vernon Smith : Mr. Baines.

It is ordered : that Norfolk Island shall be and is hereby separated from the Colony of Van Diemen's Land (now called Tasmania).

It is further ordered : that the said Island shall be a distinct and separate settlement, and that the Governor over the Colony of New South Wales is appointed Governor of the said Island.

Instruction to our Governor for the time being of the Island called Norfolk given at Our Court this 24<sup>th</sup> June 1856 :

Whereas the inhabitants of the said Island are chiefly emigrants from Pitcairn's Island in the Pacific Ocean, who have been established in Norfolk Island under Our Authority, and who have been accustomed in the territory from which they have removed to govern themselves by laws and usages adopted to their own state of society.

You are as far as possible to preserve such laws and usages.

All those wise and noble ones who were gathered at the Palace have passed, but upon little Norfolk there still remain twenty who that same day were busy helping their elders set their new home in order.

The laws allowed by Governor Denison were amendments to the old Pitcairn Code, and what were considered appropriate to the new conditions. The killing of cats was cut out, so too the chaperone business, and other like quaint orders as have been mentioned in the excerpt from that interesting document. I have had access to a copy of those old Laws of Norfolk, now given way to those of later date.

They call for the old time Chief Magistrate and Councillors. The election must be on Boxing Day. The Chaplain must preside and open proceedings with prayer. The Chaplain himself was not available for election. There is to be Trial by Jury of seven Elders who are to be males of twenty-five years and over, and all such males on the Island are to come under the term. As to the selection of the Jury, all Elders' names are to be put in a bag from which seven tickets are to be drawn by the Chief Magistrate in the presence of the public. A fine of 1/- is imposed for refusal to serve. No gaol for anyone : only a fine : the limit to be Ten Pounds. Cases of assault to life or limb must go before the Governor at Sydney. All children must attend school, 6<sup>d</sup> a day fine for absence. To be a valid excuse, the Chaplain must certify. Fine for furious driving to be £1. "For galloping a horse on Samuel McCoy's front lawn to be £1." (I have failed to find the reason for McCoy's special "pull".) The Chaplain to be in charge of all liquor and he alone to issue permits for its use. And these laws are stamped with the Seal of the Crown Colony : a Norfolk Pine in a circle, a regal Crown surmounting.

## The Norfolk

It is now for us to deal with events onwards from 1856. The Chaplain was no longer called upon to act the School Master. To teach the budding Norfolk, the Home Government secured the services of a Somersetshire man, Thomas Rossiter<sup>331</sup> his name, who filled the post for his full term, and that of Government Agent in addition, and then became a settler, taking land in '67 with the consent of the Authorities in lieu of passage Home for him and his. He was enamoured of the lovely isle; his children today are leading members of the community. By judicious management he became more and more of a landed proprietor, so that at the present time, after the Nobbs family, the Rossiters crowd the survey. Along with Thomas Rossiter came two others sent out from Home by a thoughtful Government, one to act as Chief Miller, the other as Chief Mason. They were received into the community and named for their share of acreage. The latter did not care to settle down and lost it; the former, James Dawe by name, remained and lived upon his land grant. Others from the outside, non officials, filtered in; some married into the community, others made friends and squatted on land that was not theirs and took their chance of eviction. Things got sadly tangled, land titles got hopeless mixed, Commissions have sat to unravel things, but knotty questions are still being raised and the end

---

<sup>331</sup> [Thomas Rossiter \(1830–1893\)](#)

is not in sight. The various Governors of New South Wales each tried their hand upon Norfolk; now it is the turn of the Commonwealth of Australia.

A strong effort was made by New Zealand to secure that right. In 1869 Lord Glasgow,<sup>332</sup> Governor of that rising Colony, wrote Home basing his claim on the facts that Norfolk was 300 miles nearer New Zealand than Australia; that the Islanders greatly desired it, as do many even to this day; and that it was ecclesiastically a part of the Diocese of Melanesia, which was part of the province of New Zealand as outlined in the Letters Patent issued to Bishop Selwyn the elder, by Queen Victoria. But Downing Street turned the proposition down.

Yet today there is on the stocks at Emily Bay, hard by Government House at Kingston, a ketch of 50 tons being built by the Islanders to trade with Auckland, N.Z. They claim that New Zealand is their natural market, and that they will not there find the produce a glut as seems ever the case with Sydney. There they have tropical Queensland to compete with, a huge State rich in all Norfolk's tiny acreage can produce. It would be interesting to watch that schooner's fortune.

But to the Commonwealth, Norfolk is vitally important because of the Cable at Anson Bay. That artery of life and commerce they must needs protect. Whilst up to the present there is no local defence, the Australian squadron is never very far off. During the Great War there were anxious times, Fanning had been cut, the Emden had done the same for Cocos, but the formidable H.M.S. Australia circled Norfolk, and the Island folk oft saw at night the searchlight of an unknown man-of-war playing round their coast. They knew that their best line of defence, if invaded, was courtesy, that their moiety of manhood could not repel. They had already depleted their ranks of their best. In the Boer War only a corporal's guard had gone forth to lend a hand, but in this last call to arms, seventy-seven had responded, who fought on French soil and won high praise. Once again a Christian and an Adams, a Quintal and a McCoy shouldered musket for the Flag under which their forefathers had served, and thus wiped out the stain upon their name. They came through by good fortune almost scatheless, yet three never returned, a Nobbs amongst them.

## Changes and Trouble

The Chief Magistracy was found not to work well. He was of the Islanders, and one after the other failed to rise to the occasion. In matters of dispute or quarrels aired in court, magistrate, complainant and defendant being all related, Justice usually took wings; and even if sentence was delivered, it was seldom carried out. Things could not go on so, therefore in 1896 a change was made, and an outsider in Colonel Spalding was appointed Chief Magistrate, and the number of Elders elected as Councillors was increased to twelve. Later the Council of Elders was replaced by an Executive Council of seven of which number five were nominated by the Chief Magistrate and two elected as before. The Governor was now represented by a Deputy, but that official still remained at far distant Sydney. A little later a Resident Administrator, combining with that office the duty of Chief Magistrate, took the place of the Deputy, and the Executive Council went back to twelve, half of whom were nominated by the Administrator, the other half elected. This is the form that one finds today. Boxing Day has ceased to be the day of voting by male and female. That great day is now and for the future July 31<sup>st</sup>. All but two of the seventeen Commandants and Administrators who have served Norfolk since 1788

---

<sup>332</sup> [David Boyle, 7th Earl of Glasgow \(1833–1915\)](#)

have been officers of the Navy or Army, the others pure civilians, the present Head of the little colony being Colonel Leane,<sup>333</sup> who served both in the Boer and the Great War.

The Norfolkers kept up the claim of their fathers for the possession of the land and the homes thereon. Governor Denison's orders of 1858 were but grudgingly followed. The matter flared up again when more than forty years had passed. In 1900 a petition was sent forward direct to the King, begging him to intercede. The King could not well do so, but turned the matter over to the Home Authorities, who in turn sent it to the Governor at Sydney where those learned in the law sifted the matter to the bottom and found their claims untenable save as to their individual allotments of land. All this took time and it was not till 1906 that Governor Rawson visited the Island to inform the people that the properties they claimed belonged to the Crown, but that as to the residences at Kingston still occupied by many, they would be allowed to occupy these rent free, and their descendants after them, provided they signed a declaration acknowledging the Crown ownership. Then flared up in some, the old mutinous spirit. Some refused to sign, were naturally evicted, and damage followed, two of the old homes being burned. That was the end. Kingston today has but a handful of Norfolkers living in it. The homes are deserted and in ruins. To make absolutely sure, the British Parliament passed a Special Act in 1907 enacting that the properties in question belonged to the Crown. The Norfolk today accepts the position with what grace he may.<sup>334</sup>

## Whaling and Conservatism

It was not long after their arrival upon Norfolk that the matter of whaling came to the front. They were always able in boat handling, and the sight of the schools of whales passing in their track between tropic waters and the southern seas, "humpbacks" as the general rule but a "sperm" whale occasionally, with their oil as a commodity of commerce, fired the Islanders' enthusiasm. Whaling ships were frequent visitors and many a young Norfolk went off for a cruise in these and learned the business. Soon three whaling companies were formed on the Island, each in charge of its Captain and off they went in pursuit when school appeared. The season is a long one, lasting from June to November. The excitement of the chase made up for the labour. It was heavy work for a tired crew to drag home the dead whale oft against wind and tide, miles from home. They had no whaling ship handy. Their methods were very crude, the harpoon and the lance. Later they acquired the harpoon gun and bomb, but when a Paternal Government gave the Companies a steam launch and a Nordenfeldt<sup>335</sup> it did not take them long to decide that the old way was best. The Norfolk is very conservative. Against all proposed innovations it is the usual cry, "It is not the custom of the Island." They fixed the Nordenfeldt upon a height of rock and sought their prey a thousand yards and more away, with bullet. All tried their hand with that gun. Some shot over, others shot short. Never once did those gunners, in the weeks they tried, land bullet in a carcass. Then they gave up, and the Nordenfeldt is stored in one of the sheds of Government House at Kingston and looked upon as a curio. The launch is housed too. There was none who understood its working, and even when a few got the mastery of the thing, repairing was something quite beyond them. It is a risky thing to have a launch break down off that coast. A rowboat they could handle, but a pinnace tossing about crippled was well nigh a sentence of death to its crew. They had not had the means to hire an expert engineer to run the thing. It was a white elephant. They added it to their curios. I use the past tense for whaling

---

<sup>333</sup> [Edwin Thomas Leane \(1867–1928\)](#)

<sup>334</sup> Controversy regarding the constitutional status of Norfolk is discussed [here](#).

<sup>335</sup> The [Nordenfeldt gun](#) was a multiple barrel machine gun that had a row of up to twelve barrels.

is practically a dead business today amongst them. The Norfolker never went whaling to acquire wealth in itself. They have no love of money. The necessity of having a little pelf<sup>336</sup> to pay for the necessities of more civilized life to be procured at the local stores opened on the Island was the real incentive. When the price of whale oil fell, the hunt was not worth the labour.

Did they need special money in former days when the price was good, it was to the sea they looked. I had a tale told me by an old Pitcairner that bears directly on this point. A woman of the community was a victim of cancer. Her husband had spent his all in sending her to Sydney for treatment. She returned seemingly cured, but awhile later the growth appeared again. She must go or die. They had no means. The community met to discuss the matter. There was but one thing to do. They must catch a whale. But it was not the season. No whales had been seen for long. They went "into prayer". Then the boats were launched, my narrator, steersman of one. Far out from land they went, when suddenly my old friend saw a spout. "There she blows" went up. That whale was secured, a trader bought the oil, and the stricken woman took the next passing ship to Sydney and the hospital.

There was little method in the business, and much loss through lack of knowledge. Usually the dead whale was towed to Cascade, where men stripped off the blubber on one side, whilst sharks tore it off in chunks on the other. Open cauldrons were used for boiling, thence the oil was ladled into tanks. There was no refining, no grading. It was forwarded, just as it was, in barrels. No use whatever was made of other parts, the carcass left to the sharks, and what they left rotted where it lay and polluted the air for miles around.

As with the motor launch, so with other things. There is but one telephone on the Island, a Government one from Kingston to Cascade Landing, used for shipping purposes alone. They talk of one from Kingston to the Cable Station, but as to themselves possessing such a thing, it is unthinkable. Gossip is carried on by visit or chat by the roadside. News on Norfolk can always wait. If word must needs go, then jump on a horse and away, man, woman or child.

There was once a motor car landed. Its fate was soon sealed. Every horse went mad. Children could no longer ride three astride going to school or returning. The narrow roads spelled catastrophe for carts and buggies. That motor car was added to the curios. I am told that there are two bicycles upon the Island. I have not seen them. I understand that the owners use them in the dark. The horses do not like them and it is not the custom of the Island.

The land is not cultivated in dead earnest. The portion tilled is not a tithe of what it was. Grass and noxious weeds take the place of the old time maize. And one can hardly wonder. The outside market is unavailable with the present shipping facilities. Within, what is needed is easily grown for a population so small. Yet they are enthusiastic enough to have an "Agricultural and Horticultural Society" with its Annual Show of the produce of the Farm, with Fruit, and for the ladies share, flowers, needlework, painting and cooking. They find the money for good prizes but where the subscribers get it from none seem able to explain. Each home seems to have a secret stocking. There are no poor, nor even one in real need. When an Auction sale of household goods is held, then you see the Islanders foregather and spend. The excitement is high, and pounds in verbal language are thrown around as if they were all millionaires, and when settlement day comes they seem ever ready of cash.

---

<sup>336</sup> Pelf: money, especially when gained in a dishonest or dishonorable way.

## The Living and the Dead

The question of their close consanguinity has been much discussed. After all it is a matter for themselves to look into, not for outsiders to lay down the laws. They are content with things as they have been and are, and I have neither seen nor heard of degenerates, nor the feeble minded, nor physical deformity. They may be the exception to the rule, but they appear absolutely like other men. What differences there are can be safely put down to their Tahitian blood.

I have been privileged to have a peep into Last Wills and Testaments of those simple minded folk of early days. Their worldly possessions were not great or varied. Horses seem to play no small part in those last wishes. One reads "My horse Bounty, and my chest of drawers to —. My cart I leave to be used in common among my children, and my clothes to be equally divided." Another was a great admirer of the first Bishop of New Zealand for he gave to one of his sons the full list, surname as well, "George Augustus Selwyn", who got a fair share of his various horses, Spot, Bottle, Diamond, Beauty, Young Beauty, Nellie, Red Petrel and Black Petrel. Another sets forth his wishes, "A carriage similar to Bishop Selwyn's old one to be purchased together with a set of harness which are to become the property of my mother." Another also has a tender spot for the old folk. "My horse which my granny gave me to be returned. My studs please to give to — if I should not return." He did not return for he was drowned upon the way. Even in such a peaceful community parents had their troubles, for there is one who would not leave even the proverbial shilling; he cut off son, and daughters two, from all inheritance.

To some, like the Writer, one of the chief attractions of these South Sea Isles is their perfect stillness. They are away from the hurry and bustle of the world. Noise to which we have grown accustomed is markedly absent. No trains, no electric cars, no horns warning of danger, no newsboys shrieking out their wares. The days are as the nights, save for the song of birds. Nature, not man, is paramount. True, one occasionally hears upon Norfolk the touting of a whistle. It is that of one of the Community Sawmills. They do not work regularly, but as needs arise. It is no factory siren, fierce and protracted, but rather a friendly call to come and lend a hand. Every few weeks another and a deeper note rings o'er the Isle. It is that of the Steamer. Then the whole land wakes up from its dreamy, restful condition. There is much to be done in but a limited time : letters received, letters sent, friends to welcome, friends to part with, supplies to handle, and 'open house' to all; then once more the deep throated clarion rings out, the ship departs and Norfolk and visitor drop right readily back into the Island's delightful health-giving repose.

## THE ISLAND OF DESPAIR (V)

### A Square Deal

Think what we may of Missionary work, let us give credit where credit is due. Many are the gibes men cast at the attempt to carry Christianity to native races. As often as not, it is a slighting allusion to first the missionary, then the gunboat. It is easy to cast slur, but think for a moment what that 'first the missionary' means. It stands for pluck of an amazing kind. We may call it fanaticism, we may call it foolhardiness, but it still remains Courage of the highest order. For they went defenceless, those men of peace. It is hardly to be wondered at that those who have never stepped beyond the limits of civilization, who have never seen man's wild life, should fail to realize the full pluck of the thing. They either laugh at, to them, the uselessness of the object, or if enthusiasts of the Cause take the risks as granted. But to those who have roamed into such regions of the world, the pluck is an ever patent fact. These men may have no enthusiasm for missions, they may be of those who consider the whole thing superfluous, but no fair minded man can withhold his small tribute to a trait when he sees it of which every manly man is proud, be the circumstances what they may.

The field has been immense. Those same missionaries have, during the centuries, covered the world; continents and islands have seen them fearlessly going where duty seemed to call them. I would but touch upon one later field, the South Seas, and even then confine myself to but a fraction of that huge area which affects in measure Norfolk Island. It is the record of the men who braved the Melanesian Race. Here pluck was called for of the highest order. No fiercer race can be imagined. Their whole life was one of fight, ruthless slaughter and cannibalism. These Gospel men knew it, went at their task, and the end of that courageous effort is not yet. From outsiders, even the rankest, honor to be paid them is long overdue, and I for one would purge my soul of all littleness in such a matter. Courage is a foremost trait of Character. Let us give it ever a square deal.

The Eastern Pacific Isles are Polynesian, the Western are Melanesian, the former are widely scattered, the latter lie almost in a line. With New Caledonia at the southern start we reach up nigh the Equator ere we end. New Caledonia and the Loyalty Islands run parallel, New Hebrides well above, then, lie northwards the Banks and the Torres Groups. Santa Cruz and the Swallow Group come next, then we reach the Solomons, to the north of which stretches the huge Bismarck Archipelago where we are amongst the Papuans.

### The Pioneer

The first to plunge into this vortex of fighting folk was John Williams in 1821 from far off Tahiti as his base. He struck well south, in New Hebrides. To him his field was wherever there were 'heathen'. He it was who first braved "Savage Island" where Captain Cook had had enough with one spear hurled at him, armed himself with a musket and flanked by his marines. But Williams landed defenceless and stayed till he was ready to depart. In 1839 he met his end, one that he had oft before escaped from marvellously. Erromanga is one of the islands in the New Hebrides. Thereon today is a Church and within a Tablet. This is what is records : "To the Memory of the Missionaries who died on this island, John Williams and James Harris killed November 30, 1839; George and Ellen Gordon killed May 20, 1861; James Gordon killed May 7, 1872." They would not be repulsed, the fate of

others in no degree deterred them. To read the story of others who went to that ominous Dillon's Bay is to be amazed at the grit of those defenceless folk. They knew full well their danger, their anxiety over their gentler companions was intense, their lives oft hung by a thread, but they would not be denied. And all the way down through over a century of work there is the same record. They have been of diverse tenets, Catholics and Protestants, but all animated by the same desire and all Captains Courageous.

Let us follow a little more closely one long sustained effort in those islands, known as The Melanesian Mission and with which Norfolk Island and the names of Selwyn and Patteson <sup>337</sup> are intimately connected.

### **The Melanesian Mission**

It was in 1847 that George Augustus Selwyn, the first Bishop of New Zealand, set out to do or die. He was of splendid physique, the Maoris knew his prowess and hugely admired him. He was every inch a man. He was a sailor too. In the *Undine*, a tiny vessel of some 25 tons, he sailed into oft unknown and uncharted waters. Reaching an island he would put off in a boat and nearing land, plunge into the sea alone. He would permit none of his fellow whites to accompany him. The savages who lived close to the reef or beach, with spears and arrows in their hands saw but one stranger arrive amongst them, the rest were by strictest order at safe distance. He came "with gifts in his hands", tobacco and trinkets that would please them. This was but the beginning, his real mission would follow in due course.

Where such a Bishop led, there did his clergy and laymen gladly follow. There was soon much to do and New Zealand's calls were likewise insistent, therefore the work was divided, and Melanesia became a separate work, with Patteson, an Etonian and Oxonian, as Bishop. It was no longer worked from Auckland, but from Norfolk Island lying due south, some seven hundred miles from the field of action. By the Norfolkers there was stout opposition and long grumbling at this intrusion. They had ever wanted the whole island to themselves, and now in addition to their fellow whites who had filtered in, there was to be a school for the savages where they were to be trained as teachers of their dark skinned fellows. The Rev. George Hunn Nobbs, the Chaplain of the Pitcairners, now settled upon Norfolk, wrote thus to the Admiral Moeresby on the matter : "I trust yourself and our other influential friends will countenance my opposing so very undesirable an addition to our social circle as a hundred or two of heathens, strong with the odour of unmitigated depravity." Governor Denison of New South Wales himself strongly opposed it on the ground that it would interfere with the plan adopted by the Government of settling the Pitcairners in conditions as nearly as possible identical with those they had previously existed under. And Governor Young who succeeded him, though Denison had withdrawn his objection, angered over the return of some Pitcairners to their first home, wrote Home, "I cannot conceive of anything more likely to demoralize the population, and turn it from the highest type of race it now assumes, back to that of mere South Sea savages." But happily for Norfolk the Mission Cause won out, one thousand acres were secured and paid for, and another colony on the historic isle commenced. That was in 1866. Here Chapel, School and Workshops, large Dining hall, houses for Bishop and the Missionaries, and Hostels for the natives was soon erected. The acreage itself was taken in hand by men skilled in agriculture under the leadership of a parson farmer, Rev. E.S. Wayne, who before taking orders had been to an Agricultural College and for two

<sup>337</sup> [John Coleridge Patteson \(1827–1871\)](#)

years was employed by the New Zealand Stock Department. Soon both land and stock were a revelation and an incentive to the Norfolkers.

Today all but one item is a memory, but there are none who regret its coming. Before the removal in 1919 (to be nearer the work), much had occurred up North and many a courageous life laid low. As with Selwyn the elder, so with Patteson. He too ever led the van. Year after year he and his band sailed in the Mission boat, "The Southern Cross", from Norfolk right up to the Solomons, landing where oft repulsed before and fixing Stations, establishing schools, taking chances with reefs, and Chiefs furious over "blackbirding", the capturing and carrying off to Queensland and elsewhere of their folk. Now here, now there, a lone missionary was left, to be found when revisited as full of grit as ever.

### **Added to the Roll of Honor**

Then the blow fell, Chief and younger friend were added to the Missionaries' long Roll of Honor. It was at Nukapu among the Swallow Islands, part of the Santa Cruz group.<sup>338</sup> Man-stealers were about, the Bishop knew it, he tried in this instance to forestall. The wind was against him. He arrived too late, though he was ignorant of the fact. With Atkin as white clerical companion and three tutored natives he set out for shore. He would land alone. The others were to wait. Nukapu is surrounded by a barrier reef which is difficult to pass through or over even in canoes; a ship's boat has no chance when the tide is low. When they reached the barrier some canoes came out to meet them. The Bishop stepped into the Chief's canoe and was paddled to the shore. Several other canoes stayed with the boat, and their occupants talked volubly with its inmates. Then suddenly at ten yards' distance they disposed their poisoned arrows at the four. Only one, by quick action flinging himself down, escaped the deadly missiles. Atkin was wounded in the shoulder, so was another, a third got five arrows in him. The first and the last died of tetanus a few days later and were buried at sea. Though thus sorely wounded they got away and reached their mission ship. The hours wore on and still no sign of the Bishop. Volunteers were called for, and Atkin despite his wound insisted upon being one of the crew. This time they put the boat clear through the surf upon the reef and rowed up and down near the shore looking for their Chief. At last, on turning they saw at some distance from them, two canoes push out, one had but a single paddler, the other many. The single paddler was seen to anchor his by stone and sinnet rope, then leap into the other, and all made for shore. Rowing up to the canoe thus left, they found the body, wrapped in a mat, with a palm lain above, from feet to breast. The death wound was clearly in the head, the work not of arrow but of club. A witness of the deed who later became a convert told of the cool courage of that sterling missionary. Those excited natives must have made clear to him that five of their number had been foully kidnapped a day or so before. Yet landing he mounted the seven foot bank, went into the large meeting house of the natives and sat him down amid the crowd. It may have been that he would rest, it may have been that Malaria's deadly weakness was upon him, but it is far more likely to have been the courageous act of a man who knew no fear. For all their clamour, he would make attempt to show he was their friend : and confidence in them was the first step. He was struck from behind. He had dared once too often.

This was not the first time that he and his young companions had faced a hostile crowd. In an old magazine I found upon the Island of Norfolk, there is this excerpt from Bishop Patteson's letters

---

<sup>338</sup> Regarding the death of Bishop Patteson at Nukapu, and his memorial, Saint Barnabus Church on Norfolk, see [Bishop Patteson: Pioneer and Martyr](#), by Rev H.N. Drummond (Parkstone, England: Ralph & Brown, 1930).

Home : “I landed amidst a great crowd, waded over the broad reef, partially uncovered at low water, went into a house, sat down for some time then returned among a great crowd to the boat and got into it. I had great difficulty in detaching the hands of some men swimming in the water. When the boat was about fifteen yards from the reef on which the crowds were standing, they began (why I know not) to shoot at us, 300 or 400 people on the reef and five or six canoes being around us. I had not shipped the rudder, so I held it up, hoping it might shield off any arrows that came straight, the boat being end on, and the stern, having been backed into the reef, was nearest to them. When I looked round after a minute, I saw Pearce lying between the thwarts, Edwin Nobbs with an arrow in his left cheek, and Fisher Young, pulling the stroke oar, was shot through the left wrist. How any of us escaped I cannot tell : Fisher and Edwin pulled on; Atkin had taken Pearce’s oar; Hunt pulled the fourth. By God’s mercy no one else was hit, but the canoes chased us to the ship. In about twenty minutes we were on board.” That must have been an exciting twenty minutes, with Death paddling furiously behind and themselves defenceless.

The Bishop, like his followers, was buried at sea. There was deep sorrow not alone on Norfolk Island for a brave and kindly man. To his high office there succeeded another Selwyn, Bishop John,<sup>339</sup> who was true son of a noble father. Attack unremitting and relentless was made by him and his from end to end of Melanesia. A famous oar at Cambridge, his boon companion Parson Hill, was another. They had rowed in the same boat as youths, they now faced heavier odds for victory. Selwyn too has passed, not by tragic route but after long suffering, maimed hopelessly in health in the fight midst ague and malaria; others have ruled, are ruling, their helpers like them every one a man. A square deal demands that those who think thereon shall not refuse that Melanesian band due tribute.

## A Memorial

The Martyrs’ Church on Erromanga has its duplicate on Norfolk Island. There stands upon the latter, a gem of a sacred edifice within the mission’s bounds, Saint Barnabus. It is a memorial to Bishop Patteson. Though all else has been pulled down and removed, this item stands. It is a perpetual witness to Courage, of willing self-sacrifice before the enemy that others may survive not for Time alone but for Eternity. He had his belief. Let us honor it whatever we may think ourselves. In such spirit do we enter that House of Prayer. Well may Norfolk Island be proud of it. It is built of well faced limestone, with roof and side pillars supporting of Island Pine. Those dark massive beams and columns in their purely natural state are in themselves, things of beauty, and speak both of strength and durability. The whole inside is beautifully finished. The flooring is of black and white marble tiled. Its windows are of painted glass; at the East end in the Apse, the four Evangelists, executed by the noted Burne-Jones<sup>340</sup> and carried through by Morris.<sup>341</sup> At the West end there is a Rose window and underneath another glass, of St. Philip in act of baptism. The font is of Devonshire marble, an exquisite piece of work. The tiles near the Altar are very rich. The reredos is of Mosaic, the woodwork finely carved. The seating is arranged as in a college chapel. The stalls are made of New Zealand Kauri, their ends each ornamented with designs in mother-of-pearl brought from the Solomons, all save two most choice baptismal shells which were sent as a memorial from the Holy Land. Its brass hanging lamps and many memorial brasses glisten ever with the loving care evidently bestowed upon them. The organ

<sup>339</sup> [John Richardson Selwyn \(1844–1898\)](#)

<sup>340</sup> [Edward Coley Burne-Jones \(1833–1898\)](#) was a British artist and designer. He was closely involved in the rejuvenation of the tradition of stained glass art in Britain. See *The South Coast* and *London in After Thirty Years, Two Months at Home*, in Part X, *Tales of Roaming*.

<sup>341</sup> [William Morris \(1834–1896\)](#)

is full piped, the gift of the noted Church Authoress Charlotte Yonge.<sup>342</sup> Happy are the Norfolkers in such a possession, but its future is in the lap of the gods, for there is the old time Church in the Barracks sufficient for the purpose as in the days before the mission came.

One other item of those times, close connected with the House of Prayer, remains, and must for all time. A little distance from the Church, across a narrow valley, down which a stream runs murmuring to the sea, lies the Cemetery of the Mission, on a sloping hill, its grass beautifully kept, each grave too, God's acre a real joy to look upon. Just under one hundred lie there. Only a few white folk; the rest are natives from the various groups up north, the change from Tropics to the Temperate Zone the reason of most of the mortality. The wife of the second Bishop Selwyn lies there, some wives and children of the various missionaries, and head farmers of Mission lands, their tombstones of various chaste designs. The natives have a neat white pine cross all uniform, or a slab of stone with a cross embossed. The names much interested me : mostly a compound of English and their own tongue, but some kept strictly to their own. The Bible seems to have been thoroughly overhauled for the former, and practically the whole Apostolic Band are there, others sought the Early Fathers of the Church, and others more illustrious names. One obliterated her past completely, for her cross reads simply "Patteson Woman". Here are some out of the many for the reader to struggle with — Utini Sorisori : Gogoragwia : Moses Nalupuagu : Shadrach Ure : Zakeus Weneti : Silas Selo : Mark Tagaronamoli : Basil Biro : Columbia Murevu : John Keble Barasau : Nat Fido : and Muriel Matalaimauri.

### Removal to the Solomons

Today the Melanesian Mission centres in the Solomons. Norfolk became too far away. Of all the many islands of the northern-most group none had responded better to the efforts of the Mission than a small island known as Florida, lying snugly between two of considerable size, Malaita and Guadalcanal. It is a choice spot, reckoned by all as the loveliest in all the Solomons. Whist called by one name, it is really many, separated by narrow channels. Its meadowlands are a most agreeable change to the everlasting dense tropical foliage of all the rest of the group. But these are not grazing grounds despite their looks; a rough grass grows there often higher than the waist. The many passages of deep water, threading their way through the land, the banks clothed with vivid green, with mangroves of brilliant coloring, hills towering on either side with here and there sheer precipices to the sea, make a picture that many go far to see. This then has been the spot chosen as the new home. To it have been transferred all the buildings on Norfolk Island. The removal began in 1919, therefore the place is not fully developed. What chiefly strikes the imagination of the Solomon Islanders in the white man's village, so far as it has grown, is the Clock Tower whence roll out the hours in sonorous tone. Pilgrimages are made to see and hear. Ere long another Memorial Church will stand completed. This on Florida is to be the lasting memory of the Bishops Selwyn. No kauri nor Norfolk pine, but all to be of native woods, and native arts and crafts are to make beautiful the interior. To it also will many a roamer wend his way.

Thus three Churches in that long strip of the Western Isles will stand as witness to Endeavour and high Courage : on Erromanga, on Norfolk and on Florida. Nukapu has its own memorial. It is a lofty cross erected immediately in front of the meeting house where the Missionary paid supremest forfeit. Upon its face is his name and this short remark : "Whose life was here taken by men, for whose sake he would willingly have given it. Sept. 20, 1871."

---

<sup>342</sup> [Charlotte Mary Yonge \(1823–1901\)](#). Yonge and Patteson are cousins.

The Mission quarters withdrawn, there was no further use for the farm. All but 200 acres were returned at a valuation to the Commonwealth Government. These have been resurveyed and are about to be thrown open to settlement, preferably to outsiders. But not for sale. No money could purchase land outright on Norfolk Island. It is to be a Crown lease for twenty-eight years with option of renewal. You may not hold more than a block of 50 acres, you cannot take less than 10. You cannot be an absentee, and must agree to cultivate to about one fifth, the rest for pasture. The rental per acre to be three shilling a year. Norfolk never did seek wealth.

That reversal of the Mission's property means much to the Island. It is its best land. And the credit of that fact is due to the oft belittled Missionary. They have gone, but their memory abides. A multitude which no man can number of like calling and mould have passed throughout the centuries. Shall not their memory likewise abide amongst their fellow men.

It is the custom at Home in many ancient Foundations to read out on set occasions the List of Benefactors, and the duty of grateful Remembrance is insisted upon in words of olden phrase but of telling force. These same missionaries have, all down the ages, been most truly public benefactors. They have — apart altogether from their own main objective — opened up lands, pioneered where settlement has followed, taught mercy and just dealing, the while exhibiting a Courage which is really above the poor praise of men. Can open minded men withhold their mead?

## ISLAND OF DESPAIR (VI) : RAMBLES AND TALKS

### God's Acre

To walk is left to visitors; one rarely meets a resident on foot. On horseback or “Jinker” is the way with them. Nor are the majority of visitors averse to follow suit. For my part, lone pedestrianism is the better way; there is complete independence, and one can linger and loiter as the spirit moves, without thought of beast of burden or one's fellow man.

God's Acre — five to be accurate — lies some few hundred yards beyond “Quality Row” in Kingston, a pretty spot sloping towards the sea, which bounds it fairly close on two sides. It might be better cared for, the long grass together with a creeper possessing no slight stalk making it difficult to walk about in quest of those who lie there. Not many, seeing that white folk from the close of the 18<sup>th</sup> Century have dwelt on Norfolk, but they are a long lived community today and the rest were but residents for the nonce, drawn thither by duties of various kinds. Convicts' graves are of course nameless and the big mound within the palings at the far end shows where hundreds were cast in. Yet some have escaped obliquity. One headstone records “John Atkinson — Prisoner of the Crown and Constable at Government House... drowned... while fishing for the Commandant” and “Major Ross of the 50<sup>th</sup> Regiment would thus mark his deep sorrow over the event”. Here is another, relating to a freed convict, “Stephen Smith of Dublin, Freed Overseer, who was barbarously murdered by a body of prisoners whilst in the execution of his duty at the Settlement Cook House”. Kingston was no safe place in those days, with every convict “seeing red” and eager for revenge. There are headstones to warders and guards but not to the common rabble.

Death by drowning seems to have been frequent. Here we read of “Captain the Honorable John Charles Best of Her Majesty's Queen's Own regiment who met his death (in 1840) by the upsetting of his boat while attempting to cross the bar of the harbour”. There was another aristocrat dwelling upon Norfolk at that time for “Here lieth Susanna, wife to the Honorable W. H. Pery” (in 1841), who was a son of that Earl of Limerick exiled for his part in the Irish Rebellion in 1798. The Countess of Limerick, his mother, lies buried here, but no man knoweth her grave. There was no record kept of place of internment, nor is there plan of ground today. There is a standing reward by the family for the discovery, but it is hopeless; most of the headstones are entirely obliterated by action of the weather in that open spot. Deaths at sea right handy to the isle seem to account for some. Frank Warren, “who was brutally murdered by a Greek miscreant on board the Am[erican] Ship ‘Hope’... 1861”. Here too lies “Antone John, late of Ship ‘California’ By his shipmates... 1878” and close by “Thomas E. Biddlecombe, Master R.N. late of H.M.S. ‘Falcon’... 1867 aged 28 years”. A Prussian lies nearby, probably off some whaler. And Byron Adams amongst the Norfolkers met death at sea in tragic fashion “accidently killed by a whale”, a life, by his engraven age, cut short.

Members of the Roman Faith are evidenced by the attempt at Latin quotation. The friends of Martin Burns got hopelessly tangled. They would fain cut “Requiescat in pace”; they have left it thus “Requisit cant in pace”, which at best is plural. Above the name they nearly landed right “Gloria in Excelsis Deo”. Pat Dencen's friends did better; they got the latter right, “Excelsis Deo” and wisely put the former in plain English. Many a soldier ne'er saw his home again. They lie there from many regiments. I came across the 11<sup>th</sup>, the 50<sup>th</sup>, the 58<sup>th</sup>, the 96<sup>th</sup>, the 99<sup>th</sup> and the Royal Engineers. Of a private in the 4<sup>th</sup> King's Own Regiment, aged 22, one reads “who was accidently shot by a brother soldier on the night of the 17<sup>th</sup> January 1834 while in pursuit of mutineers engaged with others in a disgraceful attempt against the Peace of the New Settlement, on the morning of the 14<sup>th</sup> of the same

month". And close by lies Private John Smith whose end is mysteriously worded "Who became the victim of a disease by a cutting accident". Gun accidents were here as elsewhere; Private Neale of the King's Own "met with an untimely end by the accidental discharge of a gun while shooting in the woods".

One naturally looks for the Pitcairners. They lived long. This grave surely is in close touch with the long Past : "Here lieth Dinah... eldest daughter of John Adams of The Bounty". Close to, we read of Charles Christian (son of the leader of the mutiny), "Choir master both at Pitcairn and Norfolk" to the end, when he touched 77 : and hard by, the much travelled Nobbs "for 55 years the faithful Pastor of the Pitcairn and Norfolk Island community" — and who watched so jealously over his flock that he became somewhat of a nuisance to the Authorities. He saw fourscore and five years, yet his good wife beat him in life's race for she reached fourscore and eleven. And John Buffett outlived both. He had joined the Pitcairners earlier than Nobbs but saw thirteen years longer life. His headstone reads "John Buffett, native of Bristol, England... aged 93 years". To Evans, the third of "Lord" Hill's "foreigners" who also moved to Norfolk, there is no headstone. He lived to a tottering old age almost equalling his companion from the "Cyprus". His granddaughter, a woman of mature years whom I met, as she tended the graves of the dead, pointed out the grave where the nonagenarian lies. Yet there lies but a few yards away another, Thomas Wright, born in far Yorkshire who leads all the sleepers in that quiet spot for he saw a clear century through, and fell asleep aged 105.

Outside there is another mound. It holds the memory of the tragedy of "Bloody Bridge", a pretty spot not a quarter mile away towards Ball Bay. It was not fitting that those who had dyed their hands in another's blood should lie within the hallowed ground. That one warder's death was fearfully avenged. Seventeen paid the forfeit. They dug their own grave. On its bank they were shot. Their bones lie there, a reminder to all who note the spot and stand for a moment musing, of those days when Norfolk was in very truth "The Island of Despair", and men wept when their fellows were led out to die, not out of pity but for the bitter disappointment that such release from "Hell" was not for them. Such is God's Acre, and we pass on.<sup>343</sup>

## Headstone

There is but four miles between Kingston and Headstone, and all the way is pleasant. Uphill and along the noble Avenue of Pines, thence past many a cosy looking homestead, till one strikes a bridle path which leads to deep gully and babbling stream to be crossed by stepping stones, then up again, and facing the cliff edge — beneath which the surf boils and dashes itself — there stands a tombstone, but one without a grave attached. There is a legend concerning this. I give it as 'twas told to me by aged Norfolk. It may indeed have had accretions as the many years since the late 40's have rolled by, and the story passed from mouth to mouth, but the main facts are likely to be true.

Two convicts, the name of one Barney Duffy, escaped from custody and for two years and more found safe hiding place in the hollow of a giant pine, which I have both seen and entered for it is but a step from Headstone. They lived on what they could forage, not however without the connivance of sympathetic fellowmen, and even of two of the military guard. For some reason, now unknown, these latter laid information : the convict pair were captured and as a warning to others, were ordered to be shot. Long and deep they cursed their betrayers, and prophesied that a tragic end would swiftly

---

<sup>343</sup> Photos of the headstones mentioned above can be found at the Australian Cemeteries Index [here](#). Some have been used to correct WWB's transcriptions.

come to them. The Headstone tells the tale : “In memory of Henry Warnam aged 26 years, and Peter Heffernan aged 22 years. Privates of H.M. 99<sup>th</sup> Regiment of Foot, who were accidentally drowned when fishing at Rope Rock. October 1<sup>st</sup> 1850. Their bodies not having been found, this stone is erected to mark the spot by their affectionate comrades.”

And here one sits and bethinks of other tragic endings in those days of despair, for the fate of those soldiers of the Queen was the fate premeditated by many a convict. Guards had to watch keenly when their gang, free of limb or leg-ironed, worked nigh the cliff : for in their despair of any alleviation of their lot, time and again as the records run, men hurled themselves over the edge to certain death, to become food for the sharks that ever hang around the isle.

Men will venture greatly for liberty, they become so obsessed with the craving that though all is dark, ahead they will make the break and chance what may befall. Surely such an one was he who broke away at Kingston and swam the three miles to Phillip Island in the offing. What prospect that barren isle held out for him none know, but it was Liberty. He was quickly followed by boat and guards. The hunted convict made for the further side, the human bloodhounds followed, and pressed him to an issue, capture or death. In his despair he chose the latter, and as they closed in, plunged headlong down the cliff into the sea. In Death lay Liberty for him.

### Circling the Isle

There is another pleasant stroll of some seven miles from Kingston. Passing the cemetery, there comes Bloody Bridge of tragic memory, where convicts settled their account with one at least of their savage tormentors. The stream below pours into a little bay a seething mass of foam under the prevailing wind; thence up a hill which tests one's calves, to the left in shady vale, a one-time experimental garden, now all run wild. Reaching the summit, the top of the Island is arrived at, with pretty glimpses of the sea through the trees, and homesteads scattered about, each with neat trimmed hedge, foursquare, around the home, and Kentia palm generally seen, waving gracefully behind the bushy fence. Here are “cattle upon a thousand hills”, and giant pines laid low by wind or axe lie scattered. Now we come to the very centre of the Island where is seen the School attended by 130 children, a fee no longer charged for them, taught by Australian trained master and mistresses. A Manual Training building is attached. Thither wend the children, mostly on horseback, often three astride.

The stores are hereabouts, but scattered, unpretentious looking, without glaring window display. The leading one is run by a New Zealander who married into an Island family, getting thus a footing, an alert man, hard to pose with a demand. Close by is a signboard announcing Saddler and Harness maker, a real necessity where all own horses and use their jinkers so incessantly. Further on one comes across a notice that here you will find “The Quality Butcher”, but of meat there is no sign, wherein he sets an example to the ghastly display of raw flesh seen in most cities. He too is a live man for he combines with this trade, that of Plumber, Tinsmith and Contractor. I have heard speak of a Dentist, but he is tucked away somewhere, and happily I had no need of him. There is a Blacksmith too, but as yet I have not tracked him.

The Island's photographer also dwells near, close against the second Methodist Chapel, built for lazy souls who felt Kingston was too far off for Sundays. This man was born in the Kermadecs, as lonely a spot in the South Seas as one can well meet with. Norfolk is alive spot compared with that group of islets. Nature is his hobby, taxidermy his profession, and photography a natural development. Tourists are grateful for his presence, his pictures save reams of writing. Now we turn into Ferny Road, alike

with all the rest, deep ditched on either side for drainage, where orange and lemon trees abound along the roadside, their fruit to be picked by whomever wills, for a full six months each year. Thence by winding and steep decline to the half ruined township and rest.

### A “Pitcainer” Guide

With all so ready to be friendly and have a chat, information is readily obtained. A white haired Pitcainer offered me a lift, I could not well refuse, and as we drove he talked. He told of much that was of a local interest, but one story of his whaling days is worth passing on. He was but sixteen years of age when a day came and whales too, which called for action. Two boats put out, one captained by a Nobbs, the other by a Young. He was in the latter. Besides Captain and himself there were three others at the oars. Full two miles out Young fastened to a cow. After plunging, it rose beneath the boat and overturned it. Away went whale and line. They managed to right the boat, and full almost to the gunwale they lashed the oars across and made use of the paddles always carried. Again the cow appeared and evidently looking for its calf made for the boat. The crew plunged into the sea. The whale reaching the half sunk boat lay long with its head resting on the side. Again departing, Young reached the boat and got his harpoon in case cow appeared once more. It did, and the Captain plunged his weapon in a vital spot. This time it sounded, then rose and rushing at the boat smashed it to splinters. There was nothing left but swimming. One of the crew was an Englishman not of the community and who could not swim. Two got his arms around their necks. The Captain and the narrator set out by themselves. He was soon showing signs of distress, but what was even worse was the consciousness of sharks rubbing against his legs. With the simplicity of the true Pitcainer he hied “to prayer” and related how a kindly Heavenly Father closed the mouths of those sharks “as He had the lions’ mouths for Daniel”. I did not venture the remark that there seemingly are times and seasons when sharks are not keen on human flesh. The men were sore spent when Nobbs’ boat, which had gone off on its own and was close to land, fancying they heard calls from seaward, turned and made in that direction none too soon. All landed safely.

He took me to see the old Bounty gun — a well-nigh sacred relic to those folk. It rests within one of the Barracks, upon a solidly built gun stand without wheels. It is rusted now beyond hope of recovery. It had a second bathing to that long one of five and fifty years in Bounty Bay at Pitcairn. Brought with them, they kept it alongside the big fireplace in their Meeting House where affairs of State were discussed of winter nights. A visitor reporting on it to the Naval Authorities upon his return to Sydney, word was sent that upon the next visit of a man-of-war, its Commander would pick it up. But this was very far from the wishes of those Islanders. When the ship hove in sight, the relic was born off to the lagoon hard by, and dropped once more into the deep. When enquiry was made, none seemed to know what had befallen it. The warship gone, the gun was brought ashore again, this time to be disturbed no more. Its fellow must be upon Pitcairn unless Authority has claimed it; its price being “above rubies”.

Another relic is close handy to the gun, kept in the Council Chamber and now irreverently used as a wastepaper basket. It is the Bounty’s kettle. Soup for a crew or cocoa unlimited could be stewed in that large cauldron. It was used for a far deadlier purpose when McCoy turned it into a still wherein to decoct his longed for spirit from the Ti root, which sent him to suicide, and his booze companion Quintal to fall before the musket of one of the two white survivors of the mutineer band. One handle hangs disconsolate, attached with a cord. A few years back, a visitor took a great fancy to the article, and realizing that he could not possibly carry the whole thing off without detection, determined to bear home with him at least a portion. Unperceived he tore away one of the handles with portion of

the sides adjacent. The vandal got a good start, but a cable took the police aboard at Sydney, and he was forced to disgorge. The Pitcairners can stand much, but that act touched them to the quick. The misused handle hangs as a warning to the tourist to respect what others highly prize, and to first ask as to curios. There is not much left now. The Island has been combed fine by yearly round of visitors.

344

### A Searcher's Disappointments

The searcher after facts of the Past in such an island as Norfolk meets with both disappointments and rewards. What one might well expect to have been carefully preserved is gone, yet finds occur in oft unexpected quarters. The running down of possibilities takes time, and many a blind alley is met with on the way. Here are instances of the latter, the one showing wanton ignorance of the true value of things, the other of wanton vandalism.

Looking back into the Past, it is natural to suppose that amongst the Pitcairn men there might have been some disposed (as was much more the custom in the eighteenth century than in the present age) to keep a diary. Amongst those few there were clearly but two who had sufficient education to do so, Buffett and Nobbs, both later additions to the mutineers' band. Searching around I learned that these same two had done so, and that upon evacuating Pitcairn's Island for Norfolk they had brought their diaries along with them and steadily added as the years went by. But my hopes of looking into such interesting volumes were rudely destroyed when I followed up the clues and learned their fate. This is the story as told to me, and I have no reason to doubt its main accuracy.

The Chaplain Nobbs had a daughter of most masterful disposition. She married Buffett's son. Long years she looked after her old father-in-law, tending him with care after his wife had passed away. When his end came, she took possession of all his papers and without a thought of their true value as footnotes to South Sea history, and despite earnest appeals for their preservation, stood upon her assumed rights and burned the lot. Here was blind alley Number One. This same good dame after serving her father-in-law and losing her husband, returned to the home nest and masterfully assumed control of the same, her old father Chaplain included. Whilst her brothers were restive under such treatment, the old man leaned increasingly upon this particular daughter. Upon his death she laid hands upon his diaries and bore them off to her Buffett Homestead despite the protestations of her brothers, the legal executors. Nothing could win them from her hands, nor could she make up her mind to destroy them. At her death they passed to her daughter who just as jealously guarded them.

There came some three years back a well found gasoline launch into Kingston, manned by two brothers on their way from Sydney to Fiji, a long trip for such a vessel and a dangerous one to boot. These brothers bore the name of Morrisby, which was near enough to Moresby to be of value to at least one of them. To the Norfolkers the latter name carries to this day remembrances of great and many kindnesses shown by the Admiral of that name to Pitcairn folk, and in special to the Nobbs family. It is a talisman and ever will be. One of these men evidently had, by his talk to those who met him, some literary pretensions and had bethought him of the same possibility as the present Writer. He followed up the trail and saw the diaries. Might he peruse them, there would be much of the Moresby doings surely recorded therein. There was, and the books were placed in his hands with strictest injunction for their early return. Anon came a note from the launch of how interesting they

---

<sup>344</sup> The Bounty cannon and kettle can be seen at the [Norfolk Island Museum](#).

were, and a request to purchase, if a sum was named. Reply was sent that they were above price and were eagerly awaited. They are awaited yet, for enclosing some bank notes in an envelope to the owner, the launch put out to sea bearing off these heirlooms of the Norfolkers and headed for Fiji. Would that conscience may yet move those brothers to restore what was never theirs, and what are grieved over as a community loss. As the story reads, it was a gross outrage. Here then was blind alley Number Two.<sup>345</sup>

These avenues closed, there yet remained two other sources of information : the Journal kept upon Pitcairn to which Brodie makes reference in his book<sup>346</sup> — the earliest written upon that island — and any Government Records anent Norfolk since its first occupation. As to the former, it was certain that the Pitcairners when they cleared for Norfolk in '56 would not leave such a record behind them as waste paper, but it was likely that the same Authorities who had sought to capture from them the Bounty's gun might have walked off with the Journal. I found one thing for certain, that it is not nor has been for long years upon Norfolk. A book was shown me, carefully preserved in the Government Office safe, which had magisterial connection with Pitcairn, an imposing Account Book with hard calf skin cover, but its earliest date was '53 instead of '00, it had "Codex Pitcairniensis" in elaborate style upon its front, the penmanship of some well educated hand, and many of its pages torn out. That it had been used in the later years on Pitcairn is clear, and there are some of the Laws of that Island written down in a scrawly hand, but it was not the book sought. I leaned to the opinion that the Journal lay in the Mitchell Library in Sydney, a wonderful collection of Australian and islands adjacent, made by a wealthy Sydneyite of that name and who bequeathed his collection to the Commonwealth on condition that it was properly housed. The Government were not niggardly, for a splendid building stands upon Macquarie Street, and the Domain (with its delightful gardens) fit home for such treasures as it today contains; but enquiries made brought me word direct that the Pitcairn Journal was unknown. In the volume I handled, I failed to find those strange laws previously noted : but there seems to have been an addition made to those affecting women, for this later edict had gone forth, "It is unlawful for any woman of the Island to walk about arm in arm with a stranger" : and another affects the number of coconuts that may be gathered, whilst a thrashing awaited any boy or girl who dared to transgress that number. Those pages torn out may bear silent witness to a complaint that grew louder and louder upon Norfolk as the years rolled on, and eventuated in an outside Magistrate being appointed, for Justice was made to bow before consanguinity, and when the ancient laws stood in the way it was said that they were cancelled. A still safer course was to obliterate all record of them. Those torn out pages give cause for grave suspicion.

Along with the Journal, I sought for the Bounty's Bible and Prayer Book, which wrought such changes in Adams and caused him to labour ceaselessly to bring up his charges, both Tahitian women and the children, in the Fear of God and the Faith of Holy Mother Church. They too have disappeared, neither are they in Sydney's Treasure House. I was told that the Bible could be shown me, but what I saw bore on the face of it, that it was not the true article. Certainly the inscription is "John Adams" but there is a "Junior" attached thereto and the date is 1828. It is no ship's Bible, but one among the many books sent out from England when news of the strange community reached the Homeland.<sup>347</sup> In the Church Vestry, where it is preserved, there is however a Register which holds memories. When

<sup>345</sup> The Mitchell Library's online catalogue entry for "Series 01: Reverend George Hunn Nobbs papers, 15 May 1853-24 April 1861" can be found [here](#); it refers to: *Box 1/Item 1: 'Register and memorandum', 15 May 1853-31 December 1857, being a diary kept during time at Pitcairn Island, 15 May 1853-3 May 1856, on board the ship Morayshire, 3 May 1856-8 June 1856, and at Norfolk Island, 8 June 1856-31 December 1857 (Issue microfilm MAV/FM4/7365, frames 1-177). Box 1/Item 2: Pitcairn Island diary, consisting of loose pages, 1 January 1858-24 April 1861, including entries for Norfolk Island. These diaries cover the period 1853-1861, whereas Nobbs lived until 1884.*

<sup>346</sup> [Pitcairn's Island and the Islanders in 1850](#), by Walter Brodie (Whittaker & Company, 1851).

<sup>347</sup> See also *The Bounty's Bible* in Part XIII, *Roamings In the Great South Sea*.

Nobbs went to England to be ordained, he brought back with him, as in duty bound, a formal book wherein to record all Births, Baptisms, Marriages and Burials. In his bold clear hand such entries are set forth, but is of real value because of his summary, touching events from the very first. Straining the word Marriage, he gives how the early band paired off with their Tahitian women folk, then sets forth the exact history of the vendetta that carried off all but two. Here were marriages and burials to his hand to make a good beginning for his Register. These entered, he started in upon more normal times.<sup>348</sup>

### A Searcher's Rewards

Disappointed in so many directions I met with success in Official Records. The Commonwealth coming into being, appointed a Library Committee to gather together and print every Despatch sent Home by the various Governors from Captain Phillip onward, and every answer received. They make a formidable series do these "Historical Records of Australia", but are a mine of absolutely reliable information. These volumes seem to have been sent to all those holding office as Governors or Administrators, and are handsomely installed in all Government Houses where such high officials reside. The doors of the Norfolk Administrator's home were cordially thrown open to me and at last I found a quarry, and set to work to satisfy myself as to the correctness of what I had gathered and transcribed, and if perchance I might light on further details or incidents of interest affecting this Island.

Here are to be read the "Instructions" given at the Court of St. James, 25<sup>th</sup> April 1787, to Captain Arthur Phillip R.N., regarding Norfolk : "Norfolk Island being represented as a spot which hereafter may become useful, you are, as soon as circumstances will admit of it, to send a small establishment thither to secure the same to us and prevent it being occupied by the subjects of any other European power" : and the Despatch telling of the sending of the first few convicts, "Their number shall be increased when a small detachment of marines can be spared." He reports that it was five days before a place could be found at which it was possible to land the provisions, "so completely do the rocks surround the Island", and that "it is as one entire wood without a single acre of clear land, the trees so bound together with a kind of supplejack that the penetration into the interior is very difficult." He gives instructions to the Commandant with a view to the possible attempt of the convicts to escape, "You will be furnished with a four oared boat, and you are not on any consideration to build or permit the building of any vessel or boat that is decked or is not decked whose length of keel exceeds 20 feet, and if by any accident any vessel or boat that exceeds such figure should be driven on the Island you are immediately to cause such vessel or boat to be rendered unserviceable. You are not to permit any intercourse or trade with any ships or vessels that may stop at the Island whether English or not, unless such ships or vessels are in distress in which case you are to afford them such assistance as may be in your power." He tells of the danger of the landing and of a midshipman of the Supply with five men being drowned whilst the ship was unloading. He speaks of no quadrupeds having been seen except rats which overrun the Island "but which cats and terrier dogs intended to be sent, will I hope, soon destroy." Two canoes were found upon the rocks by the first arrivals, driven, he thinks, probably from New Zealand, but a fresh coconut and a small piece of carved woodwork not long in the water suggest to him that some Island inhabited lies at no great distance. He had an eye on every incident, however trifling, as a possible clue to something greater. A plant that produces pepper is found on the Island. Several roots and some of the pepper are sent to Sir Joseph Banks, the Botanist, "who I

---

<sup>348</sup> Susequent to WWB's visit, the Pitcairn Island Register was [published](#) in 1929.

have requested to inform your Lordship if it proves to be, as supposed, the same as the East India pepper used in England.” So glowing were the accounts sent Home regarding the Island both by the Governor at Sydney and the Commandant of the place itself that a Despatch comes from the Secretary of State for the Home Department which may well make the Sydney of today smile broadly. “Were it not for the great labour and expense incurred already at Port Jackson, I should have been inclined to have recommended Norfolk Island’s being the principal Settlement. This appears now to be unpractical.” Australia a dependency! of Norfolk Island with a thousand miles of sea between them.

To Lord Sydney he writes early in 1790, “When the Supply returned from Norfolk Island I was informed that the convicts had laid a plan for confining the officers and free people on the Island, which was to be carried into execution the first Saturday after the Supply or any Store ship arrived. It was usual for the Commandant to go every Saturday to a farm at a short distance from the Settlement. There he was to be seized and they were then to send in his name for the Surgeon and several others who as they came out were to be seized, and the Marines going out on Saturdays into the woods to get cabbage trees were to be met on their return and confined with the rest, as well as those who came on shore from the ship, after which a couple of convicts were to go off in a small boat belonging to the Island and inform those on board that their ship’s boat had been staved in landing. This intelligence they supposed would bring more people and boats on shore. These were to be secured with the others, and the convicts were then to go and take possession of the ship with which they intended to go to Tahiti and there form a settlement. A convict woman discovered the scheme to a free man with whom she was living, in hopes of persuading him to leave the Island with her. The Commandant finding there were only three convicts not engaged in this affair returned them all to their different duties after taking such steps as he judged would prevent their attempting to carry their scheme into execution.” In this connection two guns were landed from the Supply and a small redoubt erected which, with the additional force of marines landed, would prevent the convicts from making further attempt at escape. Those same guns now stand beside the old Bounty gun outside the Government Offices at Kingston.

To escape from Norfolk was now considered so improbable that in a later Despatch occurs the following : “Your Lordship will permit me to add that if it is the intention by sending convicts to this country, to prevent their return to England, that intention will best be answered by their being sent to Norfolk Island. Such convicts would be perfectly safe there, but from this Settlement (Sydney) ships will easily find means when in want of men, of carrying away.” But the improbable happened and the unrest was continuous amongst a section.

Commandant King reports to his Superior Officer at Sydney, “There are now and have been for some months past, in confinement for capital offences, five convicts, most notorious offenders, every one of whom is as great a villain as ever graced a gibbet, exclusive of the two which set fire to the Sirius (after its being wrecked). Could I have found any fresh water on Phillip Island I should have been able to have kept those villains in good order by sending them to that Island. I expect I shall find myself necessitated to send them to Nepean Island, first taking care to send as much water as will last them two months, and after that when the weather will admit, once a week.” If this was not done then, it seems to have been done in those darker days forty years later, for it is the tradition that the Pitcairners upon arrival found skeletons of men upon that cut off spot, yet almost within hail of the main gaols.

In October 1792 King reports that five convicts went into the woods where they joined another named James Clarke, who had been out a fortnight. They plundered the grounds of settlers and others and were daring enough to make an attack on the stock in the farmyard, having just previously plundered his own garden. Four were taken in one night and the next day given one hundred lashes each, part of a sentence of three hundred. Another was caught who said he thieved in hopes that he would be

hung and thus end his exile. He was but eighteen years of age. Four months later Clarke was shot and killed by a man whose grounds he was robbing at the moment of firing. “This unhappy wretch has been a terror to every settler. Every patch of potatoes or cabbages were plundered by him.” The Island as can be seen was a lively, and as we know, a busy spot in those days. It had its difficulties of other sorts as well.

In a return of Colonial Shipping, a notice appears, “The Norfolk, a sloop of 16 tons built at Norfolk Island 1798.” And this in spite of the stringent orders above noted. But it had to be done for no ship had called for long from the mainland and the little settlement was in distress; they could not carry on their husbandry for lack of instruments and “the people are nearly naked, the convicts which arrived in the last ship being put ashore wholly in rags.” So the Norfolk sped on her way and having delivered her message was not returned, but handed over to Dr. Bass and his friend Lieutenant Flinders to make their memorable journey, the circumnavigation of Tasmania. Three years later a brig of 56 tons named the Harbinger was purchased to run between Sydney and the Island and was renamed the Norfolk. Its end came a little later at Tahiti whither it had been sent for supplies for the needy crowd on the mainland.

All this time there had been no Chaplain on the Island. One had been appointed at Home, but had begged off. It seemed a wholly uninviting post. With the opening of the new century, action was taken at Sydney, and one who had fallen under the ban was selected, the Rev. Henry Fulton,<sup>349</sup> who had been transported for the part he had taken in the Irish rebellion, who was granted a conditional emancipation and sent as minister to the Island. Despite the presence of women and children in that period, no attempt seems to have been made as to schooling.

Once again the longing for freedom wrought mischief. Major Foveaux, in charge, reports in 1801, “The insurgents sent to this Island nearly carried out one of their wild plans. Their pikes found are completely handled and were ready for use.” Strong measures were evidently taken, for the Governor writes to the Duke of Portland, “I trust that the particular situation that Officer found himself in will be deemed an excusable reason for the steps he judged it necessary to adopt.” The Major’s further report dealing with those steps is lost. And now comes the Despatch ordering evacuation and the long job of getting all away, followed by a silence of fifteen years in the Despatches anent the Island, for not a soul dwelt thereon. The scene moves to Tasmania and at Hobart I may pick up the trail of the convicts.

In 1825 came the order for return and we read the state the Island had got into, when the new Commandant reports to Sydney, “The wild livestock are in great abundance, particularly pigs which are beyond all calculation. Goats are also numerous. The buildings are in a state of utter ruin, but from the walls remaining a temporary gaol and government store will be formed.” With Class 3 “Incorrigibles” — as now the prisoners of the Crown were called — we might well expect trouble and the records show it.

In ’26 the brig Wellington sailed from Sydney with 65 male convicts and a paltry guard of 12 marines under a sergeant. A few days en route for the Island they rose, seized the ship and steered for the Bay of Islands in New Zealand. Unfortunately for them a whaler lay in the Bay — the “Sisters” — whose captain, learning of his fellow captain’s plight, opened fire upon the pirates. A number leaped overboard and escaped to the shore, but they were seized and held by the Maoris. The whole lot were returned to Sydney and the ringleaders suffered death.

---

<sup>349</sup> [Henry Fulton \(1761–1840\)](#)

Commandant King's view of Phillip Island as a good place for the refractory was the view shared in by half a hundred of the wilder spirits in the year '27. They attempted to surprise the garrison in the early morning, one soldier losing his life but seven convicts went with him. The rest rushed for the Landing and embarked in the boats belonging to the Establishment. They steered for Phillip Island where they landed. But they had left one boat behind for it was leaky and out of repair. The Commandant had the leaky thing put into shape and went in it the following day with a handful of soldiers to the rock three miles off. Here he seized the boats and then had the convicts at his mercy. Of the leaders, two were executed and one spared, though already he had a sentence of death against him from the old land. This man, Patrick Clynch, seems to have a while later again broken away and to have escaped to the woods for he attacked the Commandant with a club as he was walking home, quite defenceless, from a farm in the interior of the island. His revenge failed. A few days later he attacked the Superintendent of Overseers. Learning that a further rising was imminent with Clynch as the leader, a sudden descent was made by the soldiers on the Prisoners' Camp where Clynch was thought possibly to be; the chief villain made a break to the bush, but ere he got there was shot dead.

During this period no woman was allowed a landing upon the Island. This extended to the Commandant himself. The place was to be an ante chamber to actual death, as appears from these same Despatches. Later this rule was somewhat relaxed and a school was opened for such children as were brought or born upon the Island to those who looked after the Settlement in various capacities. But their presence did not mollify the temper of the place.

In '35 once again the convicts made a break for liberty. A rush was made on the guard as they received from the gaol yard the gang set to outside work for that day. Some thirty others who had pleaded illness and were awaiting the Surgeon's inspection overpowered the soldiery, but the latter being reinforced from the Barracks dispersed the mutineers, killing many. In the meantime those confined at Longridge, back of Kingston, had broken out and armed with any tools they could snatch up, rushed down the hillsides to help their confederates. They were too late, they did but join in the rush for cover. Of these, there were thirteen sentenced to death and duly executed "in the presence of the other convicts of the Settlement." There were other breaks, but enough.

At last came the order for final evacuation, clear and explicit as all these Despatches are; Norfolk's dark days were over. It is remarkable to note the care with which every detail all the long years through is handled in London, and the wonderfully clear grasp of a position thousands of miles away by those who had no personal experience of the life or the country itself. Those twenty volumes of correspondence represent an enormous amount of careful thought. There is no request for further particulars, all is clear on both sides. They are the work of men well trained and highly skilled in their various important posts. But they strike a sombre note throughout : they are dealing not with free men and women but with criminals. Severity rules, and nowhere more insisted upon that Norfolk, till the pressure rightly stamped it upon the minds of all cognizant of the doings those days in the far distant Pacific Ocean as, a Living Death — The Island of Despair.

## THE ISLES OF JOINT CONTROL (I) : THE NEW HEBRIDES

### The Condominium

Condominium is the word and runs glibly off the tongue, but the carrying out of that strange partnership is not so easily pronounced upon. It had advocates, seemingly but very few, and its numerous loud-voiced opponents. The former say that it spells success, the latter a rank failure. I speak of those who look upon it from the outside. In Australia the papers are never very long without some slighting reference thereto, always urging entire possession by the British. The Protestant Missionaries keep up the agitation ably seconded by those who seemingly imagine gravest menace in another colony of Frenchmen so handy to their doors. New Zealand's late prime minister<sup>350</sup> dubbed it a failure and persistently urged at the very least a partition between the two Powers; the old Thunderer<sup>351</sup> at Home writes of it as most unsatisfactory. As to what those think who are the spot, who live daily under it, and are making their livelihood on the various isles, I went to learn. It would best be learned by going about the Group, mixing freely with both French and British, the missionaries, the planters and the traders. The natives themselves are unfortunately inarticulate to the outsider, but they cannot be ignored in any final settlement, if such has to be, for they are the true owners of the soil and "self determination" is now an accepted fact as a political doctrine.

The Condominium was long years in the forming. All the paraphernalia for carrying it out is now upon the spot, the Joint Courts of Law, the Customs, the Constabulary, the Post Office, the Treasury, the Health Officers and Public Works Department. So far as my memory recalls, it is an experiment in politics save for the Anglo-Egyptian rule of the Sudan, and a passing phase of joint hands in Samoa and Morocco. There have been many instances of peoples of the same race and language amalgamating under one government, but here two nations of about equal strength, yet of different blood, have come together in a friendly way and set up a joint regime. Thus was settled in 1906 the vexed question covering so many years as to who should be considered to have the right to embrace the New Hebrides within its Empire. A Republic and a Monarchy agree to partnership thereof. This left out the voice of the natives, but even that was better than an open rupture which it was fast drifting to.

### Discovery

It was a Spaniard who first discovered the group in 1606. Spain made no claim to them. They lay forgotten till a Frenchman — Bougainville — sailed between Santo and Malekula and called them the Great Cyclades, but he went straight on nor did he raise his country's flag. That was in 1768. The Englishman — Cook — sailed slowly through them in 1774 and renamed the group as now known, yet raised no flag. Under the New Zealand Charter of 1840, it was considered, through its latitude, as being part of that new colony, but it did not stand the strain. Men were too busy further south. Admiral Despointes, by a piece of sharp practice in 1853, hoisted the French flag on New Caledonia, first seen by Cook, and laid claim to its "dependencies". But did he mean those far off or the natural ones

<sup>350</sup> [William Ferguson Massey \(1856–1925\)](#)

<sup>351</sup> Peter Fraser and Edward Sterling were two noted journalists, and gained for [The Times](#) the nickname 'The Thunderer', from "We thundered out the other day an article on social and political reform."

of the Loyalty Isles close to hand. By the seventies hardly any French had settled in the New Hebrides, but there was a good sprinkling of English traders as well as missionaries. Roman Catholic missionaries had tried to get a footing, but had given up. Malaria beat them. Long years later they returned, this time to spread themselves far and wide. By force of circumstances most of the trade to and from the Group passed though Noumea in New Caledonia, and this was long pointed to as showing that it was a natural adjunct to its large neighbour in the South West. Then came into being the New Hebrides Company — a French concern — under whose auspices French settlers began to pour in, and soon they outnumbered the British, as they do by nearly three to one today. Little wonder that with such a history, things got somewhat mixed. The Condominium is a serious attempt to straighten matters out. It is but young yet, revised in 1914 with the object of making it more workable, but only ratified and brought into use in 1922. The Great War has given it but little chance. It has hardly as yet had a square deal and men who write it down a failure may find themselves to have been over hasty in their judgment. It is an interesting experiment, well worth roaming far to see.

## The Group

The New Hebrides is a Group of some thirty inhabited islands, with various smaller ones, stretching over 400 miles of sea, due north and south, and possessing a land area of three million acres. They run in size from coral islets of a few hundred acres to islands fifty and seventy miles long by forty-five miles in breadth. They do not hide themselves away like atolls, but stand out boldly. They are mountainous, volcanic and heavily wooded. They charm the eye. Little wonder that the authors of the many books written on the Group are unanimous in their praise. That bibliography is both varied and extensive. Admirals and Captains, Missionaries and Travellers, Students and Biographers, all have been busy with the New Hebrides. The French have done their share. Just as some of these islands stand out preeminent, so do the names of some of our fellowmen. Of the latter, the forceful Missionaries, Paton and Geddie, Inglis and Gunn,<sup>352</sup> stand out above all the rest. It was they who bore the brunt of the battle with savagery and who paved the way for the peaceful entry of today.

Of the Islands from north to south, Santo comes first. Such is its shortened name; its grandiloquent one, bestowed upon it by Quiros in the long Past, is La Austrialia del Espiritu Santo (the South Land of the Holy Ghost). He thought that he had struck the Lost Continent, and died in that belief. Where he made his landing he gave the name St. Phillip and St. James Bay. It is a fine sheet of water, with his Jordan River running into it, but the non-sentimental planters of today call it Big Bay and let it go at that. They have done worse than that, for but a few miles south on the inner coast where steamers make a point of calling and both Government Agent, Mission Station and one of the finest coconut plantations in the Group is to be found, they dub Hog Harbor. It is a shame to give so coarse a name to so inviting a spot. Nature is at its best there and man refuses to rise to the occasion. Yet there is cause, for pigs play an all important part in the life of the New Hebrideans. It reaches to the human race, for women are bartered for pigs. The gentler sex have a cruelly hard time throughout the Group. They seem to have become inured to it. It is on record that even those who have come under the influence of the missionaries resent their being given in marriage without their value being paid in hogs. The more modern way does not exhibit their true value.

After Santo in interest we come southward to Ambrym with its ever smouldering and oft times wild volcano. Its last great eruption was in 1913, when five craters, including the summit of the Island,

---

<sup>352</sup> [John Gibson Paton \(1824–1907\)](#). [John Geddie \(1815–1872\)](#). [John Inglis \(1808–1891\)](#). William T. Gunn (1853–1935).

opened out in full blast. It swept away Mission and Hospital, plantations, points of land and many natives. This is an Island twenty-four miles by seventeen, and both white folk and natives thrive on it today, despite an ever present danger, with little room to move when a crisis comes.

A little further south there rises out of the sea a perfect cone, like a sugar loaf, named Lopevi, five thousand feet high, ready for real business at any moment. It is largely left alone. Scientists tell us that nowhere the whole world over is the Earth's crust thinner than in the New Hebrides.

Then southward again and we reach Efate or Sandwich Island, whereon is Vila, the Port of Entry, the commercial centre of the Group, the site of the British and French Residencies, and all the outward necessities of the Condominium. From earliest days Vila has been known. It had its rough time when the Group was No Man's Land and Law and Justice could not reach it. Those were the "blackbirding" days when lives were cheap, both white and native. But now Vila is altogether proper, and into its harbour come the regular monthly mail steamers from Sydney, of both nations, a French Ocean Liner at stated interval from Marseilles and planters' ketches from various isles. It has hotels, the Paton Memorial Hospital, a French one likewise, Churches, Barracks for the Constabulary, and Athletic Ground whereon I have seen "Soccer" played finely by bootless natives.

Next of note is Erromanga still to the south. "The Martyrs' Isle", no small patch, some thirty-five miles by twenty-five, where such daring soul as John Williams, the pioneer of pioneers for the Christian Cause, came to his death, and others besides as the years rolled on. Nowadays, as if to show its peaceful attitude, there is a large sheep station on Erromanga and many a tourist makes safe but astonished pilgrimage to the Martyrs' Memorial Church.

And last of special note, still southward, lies Tanna with its ever active volcano, whose crater forms the top of a low mountain. It is easily accessible, lying but a mile from Sulphur Bay. A short climb brings one to the top, from whence, with care, a look can be taken inside, the while watching that the rocks hurled forth and upward do not land upon one's head. Port Resolution was highly thought of by Captain Cook for an anchorage. It might have out-rivalled Vila, but it is ruined now. An earthquake raised the whole bed of the sea within the Port.

The group has its disadvantages for white folk. It is within the Hurricane Belt and malaria is rife. But forewarned is to be forearmed. To wary ones hurricanes give warning, and quinine is in every home.

## The Natives

The natives, who number some 55,000, are not the host that they once were. The white man's advent has, as usual, worked to their depletion. The horrors of the labor traffic, and the bloodthirsty crowd who sailed these seas for sandalwood and whales made havoc amid these largely defenceless folk. Yet they fought back and many a man was marked for destruction when opportunity served. In parts they are untamed still. Those who live around the coasts of the various islands may be considered quiet, but those who dwell in the hills, especially on Malekula, are by no means to be depended on. Upon arrival I read a notice upon an official board regarding the effects and the estate of one — Clapcutt — who was killed and partly eaten upon Santo but a year ago.

The natives vary greatly from island to island. Whilst the majority come under the designation of Melanesians, there are true Polynesians among them. Straight hair and woolly, rich brown and well nigh black skin, tall athletic figures and many well nigh pigmies, and albinos not unknown. Their language also is not one. Those who dwell on one side of an island speak wholly differently from

those on the other. Every village seems a community in itself; they go not beyond their confines save to seek new blood by barter in women. The long stretches of water which lie between most islands forbid much intercourse, for the New Hebridean is not cunning in the art of canoe making. His is but a poor craft, his paddle likewise, compared with all others I have seen. He has his roughly-made outrigger, but his timber is small. None so far have a thwart above a foot broad, hardly a child could sit or kneel within. In his appearance and his customs, his intellect and his desires, he is reckoned as the lowest grade of all South Sea natives.

## Vila

Vila, the Port of Entry, might easily improve itself. Under the Convention, arrangement is made for municipalities, with councils empowered to generally look after the welfare of their charge. As far as Vila is concerned, it has never got beyond the naming of a Mayor, which official exists today, but without power to do aught save marry couples. The thought of taxes put a stop to further action. But the result is deplorable. There appears, to a visitor, to be no attempt to keep the place clean. The so-called roads are littered with rubbish. Old bottles, tins and rags, weedy grass and ancient bones are met with everywhere. The foreshore seems a favorite dumping ground. Vila gives one the appearance of being utterly uncared for. What is the duty of all becomes the duty of none. Yet the site is charming. Indifference has ruined it. There seems to have been at no time any idea of laying out a town. Everybody built shop or home just where it suited them. It is a mere jumble of buildings clustering along the narrow beachfront and none are built for beauty, the Post Office alone excepted.

Once up the hill things are better however, but there lie the homes of the officials who were expected to need room to breathe. The sanitation of the place leaves much to be desired. The water supply is precarious; it is a question of tanks and rains, yet there are streams at no great distance which could give a never failing supply. Possibly some fearsome visitation will have to occur before action is taken, and meanwhile a very lovely spot is marred to the eye of the traveller.

Within the confines of the ample harbour lie two islands, well lifted up and covered with verdure. That furthest one is Vila, the home of the natives with its Chief and its Church, to which canoes are to be seen ever coming and going. The nearer one is Iririki, purchased by the Presbyterian Mission in the Long Ago for a site for their Hospital, and a goodly portion later leased to the British Government for the site of the British Residency. The latter is an unpretentious building, built at first evidently with a view to defence, for its innermost rooms today are of solid concrete, to be later added to by wide wooden verandah and sleeping rooms. From its lofty perch a glorious view can be obtained, whilst from its flagstaff floats out from sunrise to sunset the Flag, the first thing to greet you as your steamer turns into the harbor.

Looking across to Vila itself, the eye catches the high towers of the Wireless Station, the Flags bravely flying before the offices of the British and French residents, the Joint Court Building in length preeminent, the Roman Cathedral and Presbyterian Church. The Anglican does not intrude here. From the first it was agreed that Melanesia should be divided between the two latter. All the New Hebrides, save three of the Northern isles, are worked by the Presbyterians. Those three islands — Aoba, Pentecost and Maewo — the Banks, the Torres, the Santa Cruz and the Solomons are the field of the Anglicans.

## Commemoration Days

I happened to fall in with two semi-religious functions, the one French, the other English. At both there was free and good attendance of both nationals. The French commemorated All Souls Day, November 2<sup>nd</sup>, the British, Armistice Day, November 11<sup>th</sup>.

Up above the site of the Cathedral is the site of the former one burned to the ground, leaving only its concrete floor. In the middle there is a monument raised to the memory of the French soldiers who fell in the Great War — Vila's quota amongst them. There is a surpassing view of sea and mountain from that site. Our party from the hotel climbed up to find a guard of dark-skinned constabulary, many officials in white, ribbons on breast, much saluting back and forth, a body of black cassocked, white helmeted priests in the background. Neither chant nor song, but much animated address, then each in turn stepped forward to lay floral tribute at the base of the monument. The bugle sounded, soldiers and civilians scattered, and the dead in far off France had once more had due homage paid them on this speck in the far Pacific.

Under the shade of a mighty banyan tree within the grounds of the British Administration, once again we all gathered to join in the great circle of Thanksgiving and Silence that would follow the Sun on the Day of Remembrance the whole Empire over. It was a simple but impressive affair, and all felt the uplift of it. There were hymns led by an artist at a tiny harmonium, prayer by the medical missionary, an address plain, politic and pointed by the British Resident; then as the Government yacht in the harbour below boomed out the hour, a silence fell on all, and thoughts and hearts went far in that short space of time. The Last Post, the Marseillaise, the National Anthem, and to our homes we wended.

Men and women in these and other far off isles may be "out" of the world, but they are very far from being not "of" the world. Indeed their very loneliness leads to an intense desire to be in closest possible touch with all the great movements of the continents and to follow with an abiding interest all that concerns our fellows. In this connection Vila is fortunate in possessing the boon of wireless. It is not a high power station, but sufficient for present needs. World news is posted daily in French, and translators are very friendly.

## The Plantations

To take such limited strolls from Vila as are possible as yet, is to see at once the richness of the Island of Efate. Only the fringe of it has so far been touched. Well inland there is reported to be a great space of level land which neither white man nor native has so far touched, for at present it is impenetrable through densest forest and vine. If what has been done elsewhere is done there, the returns should quadruple the present output of the island. It is pleasant to walk through the plantations beneath the shade of the coconut trees, not planted promiscuously as with the native, but in long lines, each tree so many feet apart, the undergrowth kept trim by cattle whose appearance bears evidence of the good food found. One comes upon great areas of cotton, the "Caledonia" variety, just now the pods bursting and hands busy gathering, to be borne off on slow-moving bullock carts to the gin, and baled ready for shipment to France. The coffee bushes are laden with their ripe, red berries, and the cocoa trees are being despoiled of their variegated colored fruit. It is a busy scene where e'er one strolls. These four are the main products of all the islands, but they do not exhaust the list. It is a question of Labour, and that is the paramount question throughout the New Hebrides today. It is a fact that the natives

have ever refused to hire themselves out to work on their own island, but are willing to do so on any other. This alone has always meant much coming and going, and added to the difficulties of the planter. He has to go outside, which means either a recruiting vessel of his own or the hiring of one with himself or his agent thereon. The professional Recruiter has gone for good; the license fee required today has put him out of business. Labor today is indentured for terms of one up to three years. It is all under the strictest surveillance; kidnapping is a thing of the Past. But there are inequalities in the business, which are a heavy handicap to the British in their search for help. It is well to know them. They will help to understand the political situation.

The two nations work under different "Regulations" which interpret for each the broad lines of the "Convention". The British cannot indenture women; the French can. The British cannot indenture labor from outside the Group; the French can. If a British planter wants good work and peace among his laborers, he must needs have the men's wives along. He can only hire women for domestic service, and this for one up to three months at a time. It is impossible for him to have an army of women servants about his dwelling doing nothing. He hires then the men and tells the wives to come along, but the Regulations insist that he not only provides these women with shelter and food, but medical attendance, if need be, as well. The French, on the other hand, hire and work the women just as they do the men. The latter nation, however, far from satisfied from what they can get out of the New Hebridean, has turned to their Chinese possessions and imported Tonkinese, not by the hundred but by the thousand. These Tonkinese are French citizens as much as is the man straight from Paris. They can be and are indentured, and are both good and tireless workers. Should the British bring in Chinese, they do it at their own risk. The Authorities may close their eyes to it, but they cannot indenture the Chinaman. Once ashore he is a perfectly free agent. He can work for the man or leave him at the wharf. It is not likely therefore that the Britisher will look that way for help. There are certainly more New Hebrideans now for him, were it not for the matter of the women.

One result is to be deplored. Planters may elect under which Government they will live; indeed every adult after a six months' residence, whatsoever nation he belongs to, has to do so. Many a Britisher has been forced against his will and all his breeding to elect to live as a Frenchman upon the New Hebrides, thus enabling him to secure the all-important labor without the severe restrictions of the King's Regulations. The pure and simple British Community, already small enough, is thus further depleted. The French, together with their Tonkinese French and their British French, practically today possess the Group. This may have important political results at a later date. Today comes regularly the French Ocean Freighter, carrying the products of the Group to Marseilles; there comes no English Ocean freighter bound for Liverpool. As soon as freight warrants it, there is assurance that a second French Ocean Freighter will be placed upon the route. The British planter has no option. He helps load the ship and adds his fraction to the manifest, four-fifths of which is French.

### **Where Battle Raged**

The Koné, a taut little steamer of 80 tons, sails out of Noumea, New Caledonia, three times a year to trade in the southern isles of the New Hebrides. It is manned by Loyalty Island boys, fine seamen, no shirkers of heavy toil, lovers of song with musical abilities above the common, not overdressed but what they have is brilliantly hued. The Captain is a joy to meet. No taciturn veteran of the sea, but a lively Frenchman. What he lacks in height, he makes up in girth. Fiery, of course, but with a heart of gold. To hear him give his orders from the bridge is to imagine that he has murder in his eye, but lo! on the instant he breaks forth into song and dances in naked feet a pirouette upon the deck. He is courtesy itself, the whole vessel is yours, and his table is that of a connoisseur. No tinned food here;

he carries livestock; and his cellar is past words. His supercargo rivals him, a real live wire for business, educated in Paris, at home in London, and speaks English most pleasing to the ear. What more could one want, and I was the only passenger.

It was the Koné that was to pick me up on Tanna, whither I went from Vila on Efate, in an auxiliary schooner, the Motau. There was Erromanga first to be seen, the isle of Missionary tragedy, but how much of it and others, depended wholly on the weather. In the southern Group of the four islands, Futuna and Aniwa to be added to the above, there is not a single harbor. Dillon's Bay offers a modicum of shelter, but all the rest of the way is open water, and you may or you may not be able to make your haven. I was forewarned that it was a rough trip to a rough coast. I found it so, but there were many compensations. Time and again we saw our port but could not make it. There was produce in plenty awaiting us ashore and the trade room aboard each boat bulging with goods for barter or sale. Sadly we passed by. But I saw what I went to see, and the rest was an experience, and an object lesson of the life aboard a trading vessel in the South Seas. Each vessel carried a motor launch, its use invaluable both as a saver of time and strength, and a surmounter of difficulties.

### Erromanga

Erromanga lies some eighty miles due south of Vila, and at the break of day I went on deck to find us at anchor in Dillon's Bay, a wide stretch of water with the sea smooth, and the head of the bay, with Williams River flowing in, not three hundred yards away. There was nothing stirring, but on one side of the mouth of the stream there could be seen through the trees and palms the Mission Settlement, the door of the Martyrs' Memorial Church wide open as if inviting entry. The beach on either side looked black and pebbly, and white water broke steadily close handy, leaving but a narrow passage for boats to pass through ere making a landing. Loading up our boat and hitching it on by a long rope to the motor launch we made an early start. We took the entrance with a rush and were soon ashore. Leaving the officials to their work, I wandered off, scaring women and children to right and left who sought cover behind bushes or risings in the ground. Such was their good manners I suppose. It was certainly kinder than to follow as a mob. I found the Mission House deserted and largely falling to pieces. Then I recalled how the first white folk made the fatal mistake of building their homes low down by the coast, and fell a prey to fever and ague. It was only after bitter and fatal experience that they built high up and back. The Mission House today lies full two miles inland, on a height of land where the full breeze of the Trade wind reaches it, and the Anopheles mosquito is unknown. The grass thatched roofs of the natives' homes could be seen clustered together at no great distance, but I was not curious for closer acquaintance, so passed on to the Church. A wide loose stone pig wall, broken down in places, surrounds it, a bar serves as gateway, and to one side within the Churchyard a tripod of rough poles supports the bell. Coming from Norfolk Island, where I had seen the Patteson Memorial Church, that perfect gem in stone, its exterior covered with creeper, its interior kept with the most meticulous care, its polished brasses, its mosaic floor, its stained windows, its seats inlaid with mother of pearl, I was frankly astounded at what I saw. It was like visiting a grave perfectly tended year by year with loving hands who could never forget, and then passing to that saddest of sights, an uncared for one, the memory of its occupant forgotten amid other cares. The wooden building badly needs a coat of paint or whitewash. The windows are broken or completely gone, rough boards nailed across instead, the seats left any old way, the little vestry evidently used as a sort of dispensary, the rostrum taken up by blackboard and easel. I looked for the Tablet bearing the names of those who had willingly given up their lives for the Cause for which the building was raised. I had to move away material from the wall at the back of the stage for the preacher, before I found and could read it. Surely the rich and powerful organization in Australia which runs the Presbyterian

Mission in the New Hebrides cannot know the state of things in their Martyrs' Church. It should be their very first care to keep it up, a privilege indeed, and no duty. The Missionary is away on furlough. I hope he returns with paint and glass to remove a disgrace.

Across the stream, amid heavy foliage, lie the graves of some of those killed by the savages. It matters not whether these have mighty monuments of stone above them. Nature has taken them to herself, and hides them carefully from the vulgar gaze. On the beach at the back of which they lie was where John Williams and his young companion Harris fell before the blows of the Erromangans. He landed on but a narrow space; when he saw danger he had not room to move. His bones lie not here. They are said to rest beneath the native Church in Apia, Samoa, but it is hard to say if the bones offered to those who came after them were really those sought for. I would not be one of those who would say that nemesis has followed the lovely island from that evil day, but there is no gainsaying the fact that the race of Erromangans has been steadily dying out. There were thousands then; there are but 450 left and those few are without energy. They may be Christians, but they are a sorry crowd. Other islands forge ahead but Erromanga stands still save for the white man's energy, who finds ample reward for his labor. Sheep thrive on Erromanga, the hills are largely clear of the usual heavy timber and grass seems abundant. Good rains had lately fallen and the great open lands high up looked fresh and green. Hidden in the bush in the deep ravine is much sandalwood, which is cut up in small lengths and brought to the coast for export. Europe, Asia, both China and India are eager purchasers. The ruffians of an earlier age took rich store of all that was handy. Nowadays it has to be sought for inland. Trunk, branches and roots all are taken, but it propagates itself. Round the matured tree grow many a sapling. There seems little fear of its dying out. Only the trained eye can spot it, its bark and shape are akin to all its neighbors in the bush. We were to pick up sheep, wool and wood later on, so moved south to Tanna.

## Tanna

Our first call was at Lenakel, an old time trading and Mission Station on an open coast. Fortunately we could drop anchor and get at once to business. The Tannese were and are a vigorous race; they number thousands and are steadily on the increase. They are not beautiful to look upon. They are indeed a savage-looking race despite their Christianity, and some hill tribes in measure hold out. Here one saw another of the sites where the battle between savage and missionary was fought out. For the latter it was fierce and desperate, made the more so by the trader. Into his quarrel I do not propose to enter, but one would have thought that his blood would have compelled him to have stood at least aside whilst the fight was on. A fine and extensive coconut plantation with open grazing land on which cattle and horses fed, with a handsome Church and Hospital nestling amid the trees, with a native village hard by, is the result of that fight. The Missioner won, but verily through tears and blood. His freehold was but a fraction at first, grudgingly given and sold to him over and over again by force majeure. Into his battleground there swept a notorious character, notorious as Bully Hayes<sup>353</sup> in the Eastern Pacific, Ross Lewin,<sup>354</sup> who fought and slew for the love of it. Those were the days of the American Civil War, when cotton went a-soaring, and Lewin scented a fortune. At the musket point he seized and cleared a huge acreage covering the site now so carefully tended and much that has gone wild again. Here he sowed his cotton : and the demand slackening, turned to direct trading.

---

<sup>353</sup> [William Henry "Bully" Hayes \(1827 or 1829 – 1877\)](#)

<sup>354</sup> Possibly Henry Ross-Lewin.

His hand was against every man, and every native against his. At last they got him. Then peace reigned : and Lenakel is a spot where boats are sure of abundant cargo.

The Tannese are rich; there are thousands of pounds in good English money in their hands : the traders have every evidence of it. The women are not content with cotton fabric; they demand silks and satins. There is English gold laid from time to time upon the counter. The men are workers and are ready for the recruiter. Seven in one day came aboard the steamer and signed on for three years in Noumea. One came alone; he was a heathen from the hills. I took good stock of him. He was clothed in a loin cloth of tightest and smallest dimensions. Each recruit is entitled to certain things upon signing : clothing, together with a platter and a spoon. What that heathen chiefly longed for was evidently a singlet. The supercargo gave him his choice. There were white ones, there were those of many stripes, but his eyes rested upon the one of the purest pink. It was on him in a trice and he sat for days on deck thus arrayed, fit and ready for aught that fortune might have in store for him. I made good friends in Lenakel and received hospitality not to be forgotten. Again the Missionary was absent, and the hospital closed down.

From thence we circled Tanna, seeing it from all sides. It has many dominating hills, with open highlands here and there. Its coastline is rugged in the extreme. We had our successes and our disappointments. Where we shipped cargo, we did trade. Here and there we had traders' white wives aboard to select goods : the supercargo proved a fine salesman, his patience with the slow-thinking native was wonderful. Liquor is prohibited to the native. It was interesting to watch the brown fellow who wanted it approach the subject. He was wary, very diffident, and almost whispered his request. He got his NO clear and distinct. May all traders be as my young friend.

### Pidgin English

English was not always spoken; that amazing Pidgin English was frequently in use. I have heard much of it these past years, but can never attain to it. It seems to largely hang upon two words, "belong" and "fellow" : but it is too easy to get them the wrong way and tie oneself up in knots for me to venture it. There are some who have heard of it, but have never seen a sample. I therefore venture to append a well-known piece of English in the "black fellow jargon". Here are the Ten Commandments, viz. :

Title. Ten fellow talk belong Big Master.

1. Man have 'm God one fellow : no have 'm 'nother fellow God.
2. Man like God first time, everything behind.
3. Man so swear.
4. Man keep Sunday very good, day belong Big Master.
5. Man keep good fellow along father, mother belong him.
6. Man no kill 'nother fellow man.
7. Man no steal Mary belong 'nother fellow man.
8. Man no steal.
9. Man no lie 'nother fellow man.

10. Man see good fellow something belong 'nother fellow man, he no want him all the time.

Now we reached White Sands, which lies close under Tanna's ever active volcano from which a pillar of cloud steadily rose. It looks and is but a short tramp from the shore and is the easiest of approach of all the volcanoes of the world. I had hoped to have made the ascent and looked down into the boiling cauldron, which by night lightens the sky, but had to be denied for our stay was all too short. We had to do our best with an angry sea and get away out of danger in quickest order. Yet we had visitors and did good business. Here was a Mission Station and a Missionary at his post who had fought on since the new century began and was ready for many a further round. It is as bright a spot as any on Tanna, though the volcano may obliterate it in an hour.

### Port Resolution

But a short trip away we turned in and dropped anchor in the most historic spot on Tanna — Port Resolution, where Cook refreshed ships and crews in 1774 and where the battle raged fiercest between the savage and the Missioner. Cook found deep water, so did the missionary. We found anchorage just within its mouth, to go further is impossible, an earthquake having since the sixties raised the whole bed of the port. Afar off at the head we could see the hot spring close to where the first Mission house stood, the fumes rising high, where the savages were wont to cook their victims. To the right, obstructed by a hill, lay the volcano whose smoke rose steadily, to the left a shelving beach where lay store and copra shed with many a ton awaiting. All was peace, but one could not be unmindful of what that port had seen. Here landed Turner<sup>355</sup> and Nisbet<sup>356</sup> to start the fight on Tanna in 1842. The savage won the first round. After seven months of fiercest persecution and ever present danger, their condition and that of their wives became so dreadful that they attempted to escape out of the port by night. They made the mouth, but outside the sea was furious and drove the poor craft back to land. They felt the end was nigh, but the morning showed them a trading vessel in port, which rescued them in the nick of time.

Paton and Mathieson<sup>357</sup> were the next to attack. They landed in the port in '58. Each had their wives with them. Mathieson stationed himself at the other side of the island. Paton lost his wife to fever and fought on alone. Neither of these men were to be easily deterred. It took four years to beat them, but in '62 the second round went to the savages. Again a trading vessel stood on to where Mathieson and Paton stood at bay and rescued them when things looked darkest. But Mathieson and his wife had had too much for nature to endure. Within three months they died. Paton lived on; after a rest to tackle for nigh twenty years and finally win the neighbouring island of Aniwa.

The final round on Tanna went to Watt and his wife,<sup>358</sup> since whose day the savage has acknowledged himself beaten and accepts civilization with such grace as he is capable of.

## Aniwa

It was to the island of Aniwa that we made our way. The one island can be seen from the other, not twenty miles away. Aniwa is a picturesque little island, lying low and compact. It is a coral island and very similar in many ways to Niue in the Eastern Pacific. They both are like an inverted platter, not a hill thereon. They have good roads, well laid out villages, and open spaces for playing grounds. Here again the Missionary was absent. There was copra here in abundance; the folks are workers. It is but seven miles by two.

'Twas the hurricane season and captains keep an extra eye upon the weather. It did not look too promising or we might have made across to the outlying island of Futuna. This is an exact opposite to Aniwa for it rises sheer out of the sea in tiers, so that it has to be scaled by native ladders from sea to shelf and then tier to tier. Here Copeland <sup>359</sup> and his wife waged war and after a two decade fight won out. Gunn too had a hand therein. It was hoped to make Futuna a sanatorium for the Missionaries, but its isolation defeated the project.

There was no call upon the little Koné to make for the last and southernmost of the islands, Aneityum, for the Motau would call there and gather up such cargo as might turn up. There was not a white person upon the island, for here again the Missionary had gone. Let it be understood, however, that in all such cases the natives are not left wholly to themselves. There are natives catechists in charge, but of what capacity a stranger can express no opinion.

When Williams fell on Erromanga the fight was not at first carried there, but to Tanna, and after that defeat, at Aneityum. It was to be an upward battle, from the southernmost island to Santo in the north. Aneityum put up a fight, but nothing compared to the rest. The natives on the whole seemed to show an interest in the message of the white men from the very first. Geddie and his wife landed in '48. Inglis and his wife joined forces in '52. By 1860 the battle was won. Unlike Tanna have the natives appallingly decreased. Once Aneityum numbered 10,000 and more, today there are but a few hundred.

## Homeward Turned

So the Koné headed back to Tanna and we made for a trading post at its northernmost point. Here was rough going with a vengeance, but the Loyalty boys and the Tannese between them conquered the surf, though it was exciting work and men worked well-nigh to their necks in the water. Our bulging store room was showing signs of weakening and these same Tannese helped on the good cause. They left laden with good things, and I saw enough sugar sent ashore to supply a candy factory. Singlets were again in great demand, and boxes, with a tinkling bell in the lock, fit receptacle for much clothing, went like hotcakes. It takes a supercargo of many summers to know the natives' mind. A store room is not a junk shop; it is a carefully planned campaign in which nothing is forgotten and nothing superfluous is allowed.

Now the sky again threatened and though we had Traitor's Head to make for on Erromanga, the thing was hopeless. We could get there, but there would be no possibility of landing. Here Cook had landed under summer skies, but we could not, so made the best of it and headed for Dillon's Bay once more, there to pick up sheep and tons of sandalwood. It was none too calm a sea to work in, but the little

---

<sup>359</sup> Joseph Copeland

launch did bravely and hauled the loaded boat through surf and wave till our holds were a joy to look into.

Then with a heavy swell and a strong following wind we headed north for Vila. It was a twelve hour run, the latter part under a full moon : let those who know, put all those things together and they will know that it was pleasure undefiled. At last we swung round the leading lights to guide us through the reefs lying beneath the calm surface of the water; dropped anchor; the captain danced his pirouette and all turned in to sleep till dawn, when landing would be made.

## THE ISLES OF JOINT CONTROL (II)

### Quiros' Landfall

Santo is the spot, the largest island in the Group, and in many ways the most interesting. It is also the most productive, especially at its southern end where is considerable settlement of French folk.

Accepting the kindly invitation of the British District Officer, I put in several weeks at that ill-sounding bay, Hog Harbor, where in addition to my host, there is an Australian Planter, cultured and the best of company, whilst a Missionary and his wife complete the list of whites. The two former are seemingly confirmed bachelors, but know how to run their homes as if they had taken a full course of Domestic Science, whilst their 'table' leaves nothing to be desired. Intent against the all too often drift to seediness, their supply of literature is both extensive and well chosen, whilst a fine tennis court for outdoor exercise and a billiard table for the evenings keeps them from ennui and inertia. My host has his bungalow with a lovely little cove on one side — *Itheas* the name — with a sandy beach, an ideal bathing place and a coral bottom which beneath the rays of the sun takes on a hue of purest Cambridge blue and where turtles disport themselves in their slow fashion and sharks are happily unknown. On the further side is *Lonnoc Bay* with its reef, over which the water breaks perpetually, but within all is calm. These names, which are all local, point to a curious divergence from the usual Polynesian custom which requires a vowel ending to every word. The Santo folk as will be seen are not averse even to diphthong.

Moro Point under my host's hands is a beauty spot by reason of his real genius for rock gardening, and being a lover of Nature it is not surprising to find the Point a bird sanctuary. They know a friend when they find one and make their nests where they will, even using his bedroom sill. At his table in an arbor apart from the house, open on all sides to the breeze and with charming vista of garden and sea, cats and dogs foregather, chickens and pea fowl too, a share of his food is theirs. His ability in the kitchen is that of an artist. I know for I have tasted. His cooks sit at his feet to learn. In that garden is an orchid collection which is the result of years of search. It is commonly reported that when on the trail of murderers, he is as keenly intent on plant collection, and even in the presence of danger he is more careful in examining some new discovery than in watching the movements of the man with the gun. For Santo and the neighbouring isle of Malekula are wild and savage still. Life is held cheap, and no man travels without his snider rifle.<sup>360</sup>

Those bush men are not pleasant fellows to look upon, neither are their women who trail along behind them. The hair arrangement is the reverse of ours, the men affecting long locks which are wonderful affairs of plait tied behind and sticking out straight, stiffened by tendrils of vine, the women pass beyond both bobbing and shingling, shaving the head past even a prison crop. Clothing is insisted upon for all those under the influence of the Missionaries, but otherwise approaching the men from behind, they seemed to be clothed solely in a piece of string, but to this in front is attached what much resembles the Highlander's *Sporran*<sup>361</sup> together with a touch of a whitish brush. The women are as Eve, save for a strand of pandanus leaf a half inch wide, which is attached fore and aft by a belt of thinnest vine. Some of both sexes at times affect a sort of tail consisting of a bunch of leaves or fern, which seems to be for an easier sitting down on rocky spots. This lack of clothing of the women is

<sup>360</sup> The British .577 [Snider-Enfield](#) was a breech loading rifle.

<sup>361</sup> The [sporran](#), a traditional part of male Scottish Highland dress, is a pouch that performs the same function as pockets on the pocketless kilt.

peculiar to the northern islands of the Group, for the heathen women of the southern isles are over-skirted, wrapping yards upon yards of grass fibre round their loins till it has the appearance of an immense crinoline, out of which bobs an otherwise nude figure. Boys and girls on Santo, till of marriageable age, wear nothing.

## Cannibals

The New Hebrideans are far from being of one race; the difference is amazing in islands even within sight of one another. The Santos differ from all the rest both in their height, their customs and their language. They are also the nearest to the pure savage, though run close by their neighbours, the Malekulans. And the cannibal still lives. To see him is to know him at once as such; he has a bestial look about him. Not that he is ashamed of his delight in human flesh, but the food seems to develop a stamp of countenance peculiar to itself.

Poor Clapcutt was the latest victim and though the ringleaders suffered the death penalty in Vila, I saw there in the chain gang others who had taken part in the slaughter and the feast, and was not impressed by them. The man was an inoffensive Trader and fell a victim on the southern end of Santo to the superstition of the natives. A self-styled prophet gave out that he had power to raise the dead. Shortly after, one of his wives died. It was pointed out to him that here was a chance to prove his claim. Not being successful, he announced that he was thwarted in his power by the presence of the white race amongst them. Clapcutt was the nearest victim. Being rank cowards, having done the deed they dared not follow it up or else Santo would have been swept clean. When the Government boat came up to the scene and my host went up into the hills after the culprits, they made no resistance, for the prophet had declared that no British or French ship could hold him or his helpers. When safe aboard and manacled, they were genuinely surprised, but he still declared to the bunch that neither rope nor bullet could kill them. He and two others swung nevertheless, and one of the witnesses of the murder, then in Vila, having made perfectly sure by surreptitiously looking on at the hanging, made all possible haste back to Santo with the intelligence, and promptly seized the Prophet's remaining wives. When an earthquake of special virulence rocked Santo a few days later, men said that it was the Prophet's returning, and today they still doubt his complete extinguishment. Far better it would have been to have brought the condemned back and hung them on the scene of their crime and in the presence of the natives.

There is an ever present danger though the white folk make light of it. It comes largely from a weakness of action in the past. Gunboats have come to punish and have retired discomfited. They have landed and been repulsed. On land it was all in favour of the natives, the thickness of the bush, the narrow trail, the distance to the hill village from the sea. Captains have said that it takes too long and is too costly to turn out a man o' war's man, to throw his life away in a brush with savages. But the savage smiles and walks as a conqueror. Other Captains have approached a place and instead of bombarding it, have fired blank rounds out to sea "to scare the natives". The effect is just the reverse.

The other way is the only one for the settlers' safety. A party was landed a while ago on Santo, amongst them being one officer and one marine, brilliant rifle shots. Up into the hills the party went. Their guide coming out on the side of a ravine pointed out the huts of the sought for, but declared it impossible to get across the valley without being surprised. Clear in vision, men were seen seated in

front of their grass huts, and two were the much wanted ones. The 'Bisley'<sup>362</sup> men were quite willing to try to reach them. The officer thought it was 700 yards, the marine put it at 600. The former got his man clean, the latter bowled his over. There was no need for further action. The fame of that shooting still rings o'er Santo and the opinion is fixed never to get within sight of white man with a rifle, though it be a mile away.

Chief Thingaroo lives but ten miles up in the hills from Hog Harbor. He is an outlaw, but neither white man nor native has brought in his head. Years ago white men went after him, and my friend the planter, who accompanied the party as an extra, was the one to suffer. He was long in hospital in Sydney and wants no more man hunting for mere excitement of the chase. Thingaroo has not long behaved himself and is left alone, but he is a danger for all that. His is a fastness impregnable and white folk unknown. Trails cross his domain and he is not unwilling for any to cross, but his secret trail they must beware of. I spoke to a Missionary who had crossed from Big Bay to the Harbour. He was trying for the shortest route. Thingaroo suddenly appeared. It was a trying moment, for the Missionary had actually stumbled on the forbidden trail. He was told that being what he was, he would be spared, but must keep to the longer trails for the future. Another fault and naught would save him.

As to murders amongst the Santo natives, that is common, and the Government is really powerless to prevent. It is not murder, according to their notions. We look upon it as a crime; they do not. To remove your enemy, the affair is carried through systematically. You do not do it yourself. A Chief orders a man in another Chief's village to be shot. He selects his native to do it. If he refuses, he is compelled to pay his Chief so many pigs. If the Chief, on the other hand, selects a neighbour to the doomed man, he sends word secretly, together with the bullet to do the deed and promises so many pigs and protection. The man is shot; the slayer reaches his new Chief's stronghold, is given pigs and wives and settles down. Later on he is sure to be shot himself in similar fashion, and so there is an endless vendetta on Santo. Often as not, they kill on the trail where the bush is thick; the body is left to be eaten by dogs unless the District Officer or a Missionary hears of it and goes out, as they always do, to give it burial.

Here is where a leakage occurs. It is punishable for white men to sell or give bullets to any native in the Group. I believe it true to say that the British loyally obey the order. If others were as law abiding, much of the murdering would cease, for the arrow, the spear and the club mean closer contact with the victim and those savages are by no means today — as once they were — open fighters. They shoot from behind. Luckily they are but poor shots; they wound more often than they slay, but they kill a-plenty. The cause seems most often not over women, but pigs.

## Of Hogs

Hog Harbour is so called because of its old time large pig market, which in measure is continued to this day. There has never been a market on all Santo where more pigs and costly "tuskers" were to be seen. Natives came from far for the great gatherings and the bargaining went on for days. Pigs are common, but tuskers rare. For a fine specimen, useless as food, being both old and thin, as many as eighty ordinary pigs are today given. The ordinary boar alone is eaten; the sows are free to roam and breed. Neither of these is large; indeed, two hungry natives can easily dispose of the whole of a

---

<sup>362</sup> [Bisley](#) is a large village in Surrey, England, which is noted for its rifle shooting ranges.

carcass at a sitting. But the Tusker is a thing apart. They are in large measure sacred. They may be sold, but always with the understanding that when dead, the tusks must be returned to the original owner. On the Sing Sing grounds, where ceremonial dances are observed, there are long boards to which are attached in row upon row hundreds of tusks, some with the jaws attached. These tusks are often complete circles, others are to be seen of two circles, the jaw bone having been pierced by nature to make this further circle complete. These boards are the memorial of a rearer's greatness. At every such gathering on the holy ground, tuskers are brought to be lightly tapped on the head by the Sorcerer, with a special club. The boar is then considered to be ceremonially dead. His life may last long, but his tusks are claimed for return when life has gone; his carcass does not matter. The poor creatures are not allowed freedom; they are to be seen tied by a cord to a post of the house of their owner. Women are of far less value than pigs : and tuskers stand supreme.

### Big Bay

Big Bay, or as Quiros named it, St. Phillip and St. James Bay, is as if it were but round the corner from Hog Harbor, but the way is not easy going as a rule. You may get there, or you may not; the wind settles the matter and 'tis a windy spot. A spacious one, too, with a shoreline of sixty miles. On either side are mountain ranges and towering at the head, though far back, is Santo Peak, 5500 feet high, a gloomy mass rarely trodden by natives and still less by white men. With an entrance sixteen miles across, with immense depth and the poorest anchorage, with the prevailing wind blowing straight in, Big Bay is not a bay inviting stay. The Protestants and Romanists have Mission Stations scattered about, but make but little headway. There is abundance of vegetation for it is a rainy place, the high hills that hem it in catching and breaking every passing cloud. When Hog Harbor was in glorious sunshine, I oft saw torrents of rain pouring down over the bay beyond.

A White Trader lives at the head nigh Jordan River — where Quiros, full of his lost continent, founded his New Jerusalem, but soon disrupted it — a rough diamond he may be, but a man for all that, and one who knows the native like a book. A prolonged stay gives a man a right to speak. Such men are interesting to meet despite their oft times unprepossessing exterior. One hears tales of many weird characters and at times has the good fortune to come across them.

### Some “Old Timers”

One of the oldest now in the Group hails from London and has lost none of his cockney manners nor freedom of speech. His appearance is quaint; the old figure will make his way down to the beach towards the approaching craft, clad in battered hat, a much worn shirt and pyjamas with a vivid pink V of huge dimension let in where the seating has given way. The visitor using the formal greeting due from one stranger to another, he will thank you for the “Mr.” and at once cordially invite you to his dwelling for a tot of rum. This is his apex of hospitality.

There died but a few moons ago another of his kind, but this one highly connected in the Old Land and who had served both under Admirals and Governors. He lived long and was active to the last. When nigh four score years, he still refused to use the gangway offered him by a calling craft. “I’m a sailor; throw me over the rope,” and thus he reached the deck. He had his weaknesses. He aimed to defeat old age even in appearance. “Not a grey hair, Sir, as you see,” as he stroked his beard, but he

was a steady purchaser from French Noumea of the best of dyes. One who often carried him whilst seeking laborers for his vineyard tells of yet other weakness. He simply had to have one bottle of rum per diem. That Captain's spirit chest suffered severely every trip. At break of day, it would be "Captain, would it be possible to spare just a thimble full of rum? I feel as if I really need it to set me right for the day." So went the usual bottle and with it all bother of hiring labour, which usually ended in a further crop of those he called his charming copper-colored nieces, who traded on his open-handedness, and after bleeding him to their heart's content, decamped. He was a whole-souled Britisher to the last. His end was peaceful, unlike most of those of his early days in the Group, who paid the penalty they had long meted out to the natives. That was the day of the poisoned arrow. In true savage fashion that same poison was secured. Upon a death in the community, the body was allowed to decompose for a period, when the arrows were plunged into the rotting flesh and tetanus germs assured. Unless drastic remedies be at once applied, such arrows are sure killers. Their use has not yet wholly passed. A native who has been struck does not hesitate to use the knife, the hot iron or stone, and will mutilate himself horribly so only he may save his life.

The white man used the rifle and rarely failed when he went hunting. Two old fellows, long time traders and great chums, had left their bay to go recruiting labour. Upon return, Jack's woman was found to have been slain. The murderer was soon known and Bill and Jack went gunning. They cornered their game in a rocky spot, Jack had but one good and complete arm. Resting his Winchester on the stump, he pulled — and missed. Bill drew a bead and planted a bullet where a second was not needed. The affair reached Vila and a man o' war came up to investigate. When the Captain reached the spot, the two old men at once pulled off. To his preliminary enquiries, each insisted that he was the one to do the deed. Jack : "Captain, I killed him." Bill : "Don't you be a liar, Jack, you know I killed him." Jack : "Captain, Bill could never tell the truth, I killed the brute." Bill insisted, "You missed him, you liar, I got him." Jack : "Well, even if you did kill him, I told you to do it." So would they hang together. But it was no hanging matter. The Captain declared that as both seemed determined to be treated as the culprit, they should be tried together on the spot. It was the unanimous decision of that Naval Court that they were both fully justified in their action. "There, Bill," said old Jack, "didn't I tell you that it would be no Fiji for us?" Fiji meaning that a trial would take place there before strangers and men unfamiliar with local circumstances.

But these sort of men did not die in their beds; they hardly expected to. There was one who had long escaped. There came a day when, in his ketch, he was rounding a high point of land near his own bay, when from above there descended a shower of arrows. Making his mast a shield and putting the main sail between himself and danger, he sailed on. But an arrow pierced the sail and drove into his leg. He died of tetanus. Another bit the dust in even more tragic fashion. They rose upon him in his cutter with axes, first breaking his legs, they broke his arms, then had him at their mercy, and even the tenderest mercies of the savage are cruel.

These white men oft went gunning far afield. They knew not fear, though every step in the bush meant likely ambush. They took their time, for those they sought had no new and far country to escape to. One sailed into his neighbour's bay and told of how a boat of his had been cut off and his 'boys' slain. Said his friend, "I'm busy here today, Joe, but I'll go with you in the morning." So Joe stayed overnight and further, for good fellowship, was pleasant after long solitariness. Then taking a crew and grub, these two went after the gang and netted a dozen copper-colored victims, one for each of Joe's good boys. When numbers were hopelessly against them, then at Malekula there were always hunters to be counted on. The natives of that isle still love slaughter. A Chief would be visited and promised so many pigs for so many victims. The Trader took no chances of other than those he wanted being brought in. He did not dispense the reward till he had seen the dead.

Those wild days have happily passed, but danger to white folk on the northern islands is still far from gone. It is not safe to penetrate any great distance from the coast into either Santo or Malekula. Those savages are as determined as ever to be left alone. They are not, however, without their redeeming points. They scorn to lie and their conception of honesty seems to rise above that of their Christianized fellows. The truth seems to be that the latter have learned of hellfire ahead for sinners, and having, in fancy at least, incurred the danger, are ready by any handy means to escape it. Their old time codes of honor are gone and the white man is to be despoiled whenever possible.

### **The Wise Planter**

I found Christmas to be a movable Feast amongst Planters. It is looked forward to amongst the native laborers with deepest interest, as their employer donates material for a Feast, as well as three days Holiday. Friends drop in for a social time and a share in the good things going, and it would mean a sad curtailment of pleasure if on one and the same day all Santo observed the Day. Therefore good Planters arrange amongst themselves when their turn shall be, with the result that Christmas oft runs well on towards Easter. For days ahead there is much excitement. Big earth ovens are prepared wherein upon hot stones and wrapped in leaves, the carcasses of steers are roasted; for in the large plantations the ground beneath the neatly planted rows of coconuts is kept clear by scores of cattle and even hundreds of goats. The days are spent in games or disporting in the sea; then comes the eating, with high carnival of dance and song until well-nigh break of day. I found sleep somewhat difficult under such circumstances; whilst all appetite fled as I beheld the undoing of ovens and the division of the greasy contents. But it is thus that the wise Planter keeps his laborers content, nor has any trouble in securing yearly fresh supplies of all the essential help : the niggardly one gets paid back in his own coin by half-hearted service and difficulty in renewing his contracts.

Malaria is rife throughout the Group; its ravages are relentless to natives as well as whites. Those are fortunate indeed who even in a stay of a few months escape an attack. Whenever I roamed there were some folk down, and deaths all too oft occurring. The utter prostration is painful to see. An attack may last weeks, coming and going intermittently. Black water fever seems the most dreaded type. Dysentery and elephantiasis, ulcers and lung troubles are all too prevalent. The entire Group cannot be said to be a safe place, from health's point of view, to dwell in, yet there are half a thousand white folk who deliberately elect to live there. I was right glad to escape with a whole skin.

There are compensations. To those who delight in real warmth, the open air life, the freedom from conventionalism, a slight measure of roughing it, the Group cannot but be attractive.

### **Motor Launching**

Both Missionaries and Planters seem also to be all provided with motor launches, some of considerable power, with which delightful runs over summer seas can be indulged in at one's pleasure. My host, of course, has his Government launch, and my stay at length nearing its end, we made our way southward along the coast to Turtle Bay, where two extensive plantations are located. Wisely their owners dwell on islands just off the mainland and away from the mangrove swamps where the anopheles mosquito thrive. The welcome at every home is very hearty. You are expected to stay for any length of time you may desire, the longer the better. There is a fine type of open-

hearted hospitality offered you. Turtle Bay is not only a home of that edible creation, but has extensive beds of the oyster, and it being the season, we fed sumptuously of the bivalve. There being none of the gentler sex around, we lived and moved and had our being in true *al fresco* fashion, which beneath a blazing sun is a thing to be desired.

From thence we made our way still south to the Second Channel between Santo and Malekula, where are many small islands nearly all taken up and worked, Malo being the chief. Here we met French everywhere, though the British have a live community of their own. Copra, cotton and coffee are the chief products. We had picked up on the way down a fine young white man, who was suffering from sunstroke. We laid him out as comfortably as one could in the launch and carried him aboard my French Steamer, then waiting for cargo in the Channel. He lingered to Vila, but died a couple of days later. The Doctor at the Channel Hospital died of fever as we pulled up anchor.

It was interesting to pass through the Bougainville Channel, on the southern side of Malo, which was the way that great French navigator passed as he sought to settle if Quiros' theory that he found in Santo the Lost Continent was imagination or truth. Then out we steamed into "The Graveyard", so-called because of its record of disaster to sailing vessels, who, caught in a hurricane, had and still have but the slightest chance to escape to the open sea where there is room, hemmed in as it is by the islands, big and small, with dangerous passage between. On Epi we called in at another plantation and spent an entire day discharging and receiving cargo. The owners live in New Caledonia and all the produce goes to France. Here we shipped yet another wreck who was being hurried off to hospital.

As dawn broke we rounded Devil's Point, and shortly after dropped anchor in Vila Harbour. Here, gathering together my belongings, I returned aboard, and headed for New Caledonia, a thirty hours' run to the southwestward.

### A Note of History

Before leaving the group of the New Hebrides, I came to my own conclusions both as to the Condominium and the question of complete sovereignty. The better to help others not personally acquainted with these islands, it is well to trace the history of their connection with both England and France from the beginning. Herewith is a brief summary giving the essentials.

For a short time under the New Zealand Charter of 1840, the Group was considered an integral part of a British Colony. Such was due to an error in their latitude by those at Home who were responsible for the starting of New Zealand on its Dominion Course; and when discovered, instead of being left as it might well have been, since their supervision was a nominal one, it was carefully corrected and the Group became No Man's Land.

In 1853 New Caledonia was formally taken possession of by the French and those of that nation began to filter in to the New Hebrides, attracted by its possibilities for trade. Britishers, too, both from Australia and New Zealand doing likewise. Their ownership was a moot point.

In 1878 Australia, moved chiefly by the Missionary element, began to grow uneasy about their future. Though the British outnumbered the French in those days by two to one, the opinion grew that New Caledonia was to be a base for operations of a peaceful but commercially powerful penetration. This to the Missionaries would mean a breaking of their practical monopoly of power; and a wedge by which the Papacy would increase its stock of priests. France naturally became aware of all the fuss and bestirred herself on her part. On our part, with her numerically strong position, the fact that her

missionaries had freely given of their lives, and their supporters both in Australia, Canada and the British Isles many thousands of pounds, and the natives' growing acquaintance with English, the British Government at Home might well have forced the question to an issue, and further trouble been averted. The French could scarcely have insisted upon any supposed rights. We lost our chance, and came to an "Understanding" that neither Government had any intention to change the condition of the entire independence of the Group.

In '83 large tracts of land were being purchased on the Island of Efate by the French and a Company<sup>363</sup> was formed in Noumea (New Caledonia) to open up and freely colonize the New Hebrides. This course had been in large measure followed in Fiji and had resulted in forcing Britain, all unwillingly, to take formal possession. The French were evidently after the same end and again Australia took alarm. This time it was not the Missionary element alone, but the politicians, for five of the Colonies petitioned the Colonial Office at Home to take action and put a stop to such evident intention of possession. Both France and England replied that the "Understanding" of '78 was still both good and binding.

Again in '86 Australia grew restive, for the French, under the plea of the necessity to protect their own nationals, actually established military posts on the islands of the Group. The result was the bringing into being of the Joint Naval Commission in '87, whose duty it was to wander round and administer justice to all alike. The French military posts were accordingly withdrawn.

But there was no civil law in the Group and with two nationals, each under their own code, it was not likely that there could be. To meet the need, the Colonists themselves in '95 set up an Arbitration Court, which they called "The Special Jurisdiction of the Union of Colonists". Both nationals were willing to have a try at it, but those in Authority flatly refused.

In 1906 came the Condominium, drawn up and signed by those at Home without consulting either Australia or New Zealand. The thing was known to be in the air and the Dominions had urged that they be heard. They were given but the finished document wherein they at once perceived great difficulties — which has since been fully proven — but were told that it was a case of take it or leave it, and grudgingly agreed.

### **The Stumbling Block**

That the British have been and are willing to give the Condominium a fair trial and that the French have not been, nor ever will be, is evident to those on the spot. One clear evidence is seen in the Land Court, which, organized in 1906, has not yet (19 years later) had a single case before it. The French have blocked the way. The certain legal preliminaries that have to be gone through, to enable action, have all been followed by the British. The French have done nothing, nor do they intend to. With them, so far as a stranger can gather, they are quietly but firmly determined that the Group shall be theirs. They are all very charming, very courteous, but there is no local doubt as to what is behind it all. As they cannot demand the isles, they are going to possess them by way of blocking others' efforts and by a carefully thought-out plan of peaceful penetration. They outnumber us vastly today, and every year the ratio will be greater. They have got the main trade too. For all Australia's protests, she deliberately has built up a high tariff wall which prevents the produce of the Group entering that continent. Politically she does not want the New Hebrides. She has enough on her hands in the

---

<sup>363</sup> The Caledonian Company of the New Hebrides.

Solomon Islands and New Guinea, the latter of which is so essential to her all round, that it is considered politically as part and parcel of Australia. It is the Missionary element that is behind all the clamour regarding the French, and being exceedingly powerful both in New Zealand and Australia, politicians have to bow before their demands and make protest, even though in their hearts they care not for the Group.

One cannot wonder at the ceaseless agitation of the Churches. We must remember their dread and real hatred of Romanism, which they are persuaded would overrun the isles — to outsiders a rank delusion — and the splendid and heroic work of their early missionaries. It seems sheer treachery to allow those noble efforts to be supplanted by a detested religious system. Would not Geddie and Inglis, Paton and Mathieson, with their forerunners of '42, Turner and Nisbet, turn in their graves if priests lead their flocks. But as a matter of fact, the Roman priests have never had a great force in the Group. Those now at work are good earnest souls, content with small things. The native mind does not find an appeal to it in Romanism. Despite what one would fancy to be the special attraction of that Church in its images, its ritual and outward show, the natives prefer the plainest of worship, the hymns, and the place and part they themselves can take in the service. To be a deacon in the Church and offer prayer before the crowd appeals infinitely more to them than to be a mere cipher, with the priest doing everything. If the Group were French today, Romanish would have to fight its own battles. The Republic has neither State Church nor any open profession of Religion; its Government rather frowns upon than helps in any way the progress of the Churches.

### The Natives

As to the natives themselves, I believe that they are pro-British. They have become so accustomed to British ways and people that they would undoubtedly vote for Britain's protectorate, rather than that of France. But the oft pressed suggestion that the French ill-treat the natives and the laborers they obtain from the island is untrue. Every Britisher I have spoken to laughs at it. Whilst the French do not take the same interest in the native, looking upon him rather as an encumbrance to progress and development of the Group, they are too wise to maltreat their hire. Natives are not only free to serve, but have every opportunity of laying any real grievance before the Authorities. Tonkinese now largely take the place of natives under Frenchmen, but there are still many serving, and it is propaganda to talk wildly of the French oppression.

As to the British settlers, they have in the main become absolutely indifferent to the fate of the Islands. They see the Condominium to be but having "a name to live". They consider it a farce and thoroughly unworkable. There are few, if any, British Planters who would not sell out if given the chance. They came for business; they have made good; they are not anxious to spend their lives there. But the French settler is wholly different. He has made it his country and his home.

It is quite possible that if the French were in full possession, the natives would suffer in one important way. It will not be long before the French will have such thousands of their own compatriots as laborers that they will drop the hiring of natives entirely. There is no doubt that it is essential for the well-being of natives races that they be in every way encouraged to become workers. Naturally they are indifferent to any sustained labor. Their food is so easily procured that their days are largely free for lazing. Those Polynesian races which have become real workers are on the increase; the drones are dying out. The Maoris of New Zealand are a standing witness to the value of work. They were dying out, but those in control of the country urged upon them the grave necessity and encouraged them in all possible ways. With their fine intelligence, they grasped the fact, and their increase is

steadily mounting. The New Hebrideans are fast dying out; their only salvation is work, but whether France would be interested enough to see to the matter is doubtful, in a spot so far away, so little known, and the numbers at the best so comparatively small.

Some critics, both outside and within, do not hesitate to dub the present state of government as “The Pandemonium”. I think such term to be over-harsh and not true to fact. The Condominium is certainly not workable, but is functioning in measure and is orderly. There is no confusion. Vila moves placidly along; the various officials do what comes to hand quietly and as thoroughly as circumstances permit, but there is no sign of muddle, nor is every man his own guide in all things. There is lack of definiteness in many desirable ways, but Justice has no bandages over her eyes and whilst Justice is strong there cannot be pandemonium.

### A Solution

It seems to me as a Roamer through the Group, having no end to serve, that the best solution would be a Mandate under the League of Nations and that Mandate given to France. Such line of action would let down our *amour propre* very easily and serve French ends in every way. The fact that the Mandate calls for a regular report to outside Authority would ensure that no injustice either to the protestant Churches or to the natives could pass unnoticed. Their interests would be safeguarded. To even mention such a solution would, of course, raise a howl of indignation both from Australia and New Zealand, but that howl would not be genuine, save for certain pressure behind the public men. I have no doubt that everything would soon settle down and run smoothly, and that the rich future, which all who know the New Hebrides feel confident of by reason of its amazing fertility, would be hastened, rather than hindered, by a prompt ending of a political impossibility, the delusion of a practical and freely workable Joint Control.<sup>364</sup>

---

<sup>364</sup> The Anglo-French [New Hebrides](#) Condominium lasted until 1980, when the Republic of [Vanuatu](#) was founded.

## A FRENCH POSSESSION : NEW CALEDONIA

### Britain's Discovery

It must needs be owned to that it was not by open and square dealing that this Island (next to New Zealand, the largest in the South Seas proper) came into the hands of the French. The facts are patent. It was ours by right of discovery. Bougainville missed it, though passing close; but Cook, after rounding off the New Hebrides, sailed westward towards the Great Barrier Reef and on his way fell in with New Caledonia. He landed at the northern end; stayed there for several days; marked on a tree near the coast the name of his ship and the date; distributed gifts and medals to such natives as he met (one of his medals being discovered in the sand of the seashore not long since); and then tried still for the west by hugging the north, but was blocked by such a line of dangerous reefs that he sailed south, falling in with a most delightful and salubrious spot, the Isle of Pines; then worked round his new found land to the north again, and so departed, to return no more. He it was who bestowed those names, finding his nomenclature in the characteristics that faced him. That was in 1774. Nearly twenty years later, D'Entrecasteaux, the Frenchman, came along and examined the coastline in detail, getting inside the Barrier Reef which entirely encircles it, stretching 200 miles beyond to the north, thus making it the second largest coral reef in the world. Men and Missionaries of both nations slowly filtered in of their own volition. Then without the slightest forewarning, in 1843, a French cruising man o' war hoisted their flag. This coming to the ears of the Authorities in Great Britain, such strong protest was raised that the Act was disavowed. Our own naval officers in the South Seas, and that far-seeing Pro Consul of New Zealand, Sir George Grey, strongly urged the taking of possession, but to increase our responsibilities in the Pacific was very much against the policy of the Home Government.

Then occurred an event which gave a handle for the French to take action. In 1850 more than a dozen members of a French Survey Ship, landing on the coast, were attacked, seized and eaten.<sup>365</sup> We were doing nothing, only saying that others must keep their hands off. But this slaughter stirred both parties up. The French were quicker on the spot and hoisted their flag once more at Balade — where Cook has landed — this time to find Great Britain too busy with greater affairs in Europe to be ready for contention over so small a place on the other side of the world. At once they started in to consolidate their position, and things had gone too far, when European peace came, for England to take action.

The natives at that time were estimated at 70,000 and gave much trouble. They did not tamely submit to the white man. It took till '59 to get them in subjection, since when, save for occasional outbreaks — the worst and most ferocious in '78 and the latest in 1917 — from those who have not come under the influence of civilization, New Caledonia has become a white man's country.

### Convicts

But a heavy blot was to besmirch the first page of its new history. It became even as little Norfolk, not far away, an Island of Despair. We had closed that chapter in '56. The French opened theirs in '64, and ere it closed 40,000 convicts had been landed. They went at the business systematically. The first batch was but 250, but the soldiers to guard them and the officials totalled 2000. Extensive prison

---

<sup>365</sup> See [Cannibal Island](#), by H.E.L. Priday (Auckland: A. H. and A. W. Reed, 1944).

buildings were begun in the harbor of Noumea at the southwest end of the Island. For women prisoners it was on the mainland; for the rest, Ile Nou, a spacious island right opposite the town, was made ready. By '70 there were 2000 prisoners, and the Communists of that eventful year at Home added 4000 more. The apex was reached in '84 when there were no less than 17,300 convicts planted down on that fair spot in the South Seas. One hundred miles up the coast on the west side, another settlement was made, partly to relieve the congestion at Noumea, but chiefly to give the Good Conduct men a chance of making something for themselves and at the same time helping out the necessary food supplies. This was at Bourail. There, men who had served their prison term but were transported for life, as well as those who had earned some remission of their sentence, were given allotments of land, allowed to marry or have their wives and children come out to them, and supplied with all things necessary for a start. Bourail lies in a delightful valley. I made a point of seeing it.

Those in durance vile had little or no chance of escape. To see those solid walls upon Ile Nou is to realize that to the full. But the Expirees were another matter. Time and again, here one, here several, would manage to escape from New Caledonia and head for Australia. Some, greatly daring, would brave the 800 miles to Brisbane or even head for Sydney, 1000 miles away in open boats. Most got away by connivance with calling ships' Captains. The most notable prisoner ever upon the Island was Henri Rochefort,<sup>366</sup> the writer, the politician and the communist. He escaped, but this was effected by a more than kindly-hearted Captain's help. Friends at Home sent a ship for the special purpose — but that is a long story. One and all made for the nearby continent. Australia kicked, and kicked vigorously. She had thrown off the incubus of Transportation, and hated to have the system so near her. She still more hated and objected to receiving the escapees. Some were rounded up on landing and sent back, but many succeeded in evading arrest and became a menace to the continent. They were the riff-raff of France, save for occasional political exiles, and landing in Australia, fell back into their former nefarious habits. The Colonial Office and the Foreign at last were roused to take action. There were "Conversations", all of a quite friendly nature, and France consented to withdraw this objectionable feature from its propinquity to the Southern Continent, with its consequent ill-feeling. Transportation ceased in 1895, but that does not mean to say that there are no convicts on New Caledonia today. You see them on every hand. They are free, but not free to return. They must live out their lives on the island. They are old, and most of them past work. Some are successes, others are failures. And on Ile Nou, there are some two hundred still confined — but for reason. They are the demented, to whom punishment has dethroned Reason. Some are dangerous and are in separate cells. Ile Nou is not a pleasant place to visit and it haunts me still.

### The Interior

The rest of the land is delightful. There is plenty of room to move about, for it is 250 miles in length and has an average breadth of 35 miles. No part of it is impenetrable by reason of tangled mass of vegetation, though its mountains are by no means easily mastered. Many of them rise 3000 feet, some over 5000 feet and look forbidding enough even under the sunshine. There seem to be two parallel ranges, but these are very much broken. There are many pretty streams meandering through fertile valleys, but the mountainsides themselves are very arid looking, though not wholly devoid of shrubbery and trees. Indeed there is said by experts to be over 150 varieties of timber on the island, amongst them the valuable kauri. But the tree chiefly seen — at least by other than the exploiter — is a eucalyptus known locally as the Niaouli. It is in its millions around Noumea and the adjacent

---

<sup>366</sup> [Victor Henri de Rochefort-Luçay \(1831–1913\)](#)

countryside. Not a graceful tree to look at, indeed a scraggy one in appearance, but a marketable one in its leaves from which an essence is extracted and sold the world over, which is claimed to be superior to the oil we all know. So common is this valuable tree that I believe the natives call their home The Isle of the Niaouli and themselves the Niaoulians. It is not an easy word to mouth, and we may be grateful to Cook — and to the French also — for not altering his appellation.

Those natives have not the full freedom of their neighbors, the New Hebrideans. The French have divided the land into three domains — for the State, for the Transportees, and for the natives. The latter have to keep to their reserves, and such as I have seen are seemingly favored spots. On the hillsides the natives have cut terraces, rows upon rows of them, which they irrigate from the mountain streams, and where they raise their vegetables, whilst around the thatched homes of wattle nestling down in the valley are bananas and maize, taro and yam vines, mango trees and pineapples.

### Minerals and Produce

The chief importance of New Caledonia today lies in its vast mineral resources. These have as yet been but scratched. There are infinite possibilities only requiring research and capital. Even to the ignorant such as I, the hills look ‘mineral’. The bare patches oft have all the colors of the rainbow on their washed-out surface. Here is purest white; there is iron rust; and a professional geologist and metallurgist whom I met — who was out for a large Syndicate in Australia — showed samples till my untrained brain reeled beneath the strain. The mere names bewilder : nickel, chrome, cobalt, iron and manganese, mercury, lead and copper, antimony, cinnabar and silver, coal of many qualities and gold. My friend was after a two hundred mile square concession, and saw gold prospects beyond all his expectations. Being a scientist, no mere grubstaker, I bowed before his superior knowledge, and shall never be surprised to hear of New Caledonia’s attracting the attention of the world. Men are at work anyway upon the nickel. There are three furnaces going at it day and night with their huge chimneys belching forth fire and smoke. And big cargo steamers lie off ready to carry away the matter to Europe, to be refined.

Besides the mineral wealth, there is cotton and coffee grown. Folk say, not residents nor planters alone, that nowhere on earth is grown such coffee. I am not prepared to dispute that statement. I could wish always to have it served me. Yet other commodity for the table is preserved meat, with its accompanying export of hides. There are several extensive meat canning factories. I was there at the off season of that business, and a prolonged drought had wrought havoc with the cattle, but I saw beeves everywhere, and at Bourail (in special) fit for show at Islington <sup>367</sup> for size, girth and roundness.

A couple of years ago, one of the factories, under Australian control, evolved a scheme for the dead season. In a bygone day some enterprising Frenchman had introduced deer to the country. As rabbits to Australia, so are deer to New Caledonia. They have become a pest. Every traveller is begged to take a rifle and help get rid of the nuisance. There is no difficulty about a license. The Government actually issues cartridges free to the settlers. Visitors find little difficulty in getting a “bag” from their automobile as they skim along the road. My days after big game are over; I can no longer find the heart to kill, so I gave no help to the country in this matter. This Australian manager saw his opportunity and decided to “can” venison. He offered one shilling a carcass and promised to travel

---

<sup>367</sup> The [Royal Agricultural Hall](#) was built in 1862 in [Islington](#), a district in Greater London, England.

along the roads to certain specified centres, there to pick up the game. All was going well; the cannery was each season very busy; the product exceedingly tasty and the selling good, when the leader of the enterprise was unfortunately killed in an auto accident by falling off his lorry hard by a small stone culvert, and the whole scheme stopped dead.<sup>368</sup>

His place of business I have seen and gone over. It is deserted now, and looks utterly forlorn. This unfortunately is in general keeping with the look of things so far as white men are concerned in New Caledonia. It looks to have run to seed, to have had its day, and to have none with the energy to waken and brighten things up. It is not hard to find the cause. When transportation ceased, the bottom of things fell out. With the many thousands of convicts, there were required a small army of regular soldiers and hundreds of officials. These, with their families, made things hum, not only in Noumea, the capital, but everywhere along the coast where men could abide. Immense stores were brought from France; mercantile houses were intensely busy; life in its social form was very much in evidence; New Caledonia was alive. The building up of it as a commercial and purely business centre is a long and laborious effort. There is a better time coming, but meanwhile a visitor is not impressed. There could scarcely be more cordial or courteous greeting given you anywhere in the South Seas; the handshaking that goes on gets distinctly wearisome — it is left or right, the whole thing or just a finger or two — the folk are out to make your stay a pleasant one, but the atmosphere of the island is depressing. On all sides you see a need of brushing up, an utter lack of spruceness and a seeming readiness to let things slide. If only Americans possessed the isle! When one has seen Hawaii and their portion of Samoa as they have been transformed under the genius and energy of that wide-awake nation, it is easy to visualize the gem they would make of New Caledonia. There is abundant material.

## The Capital

Noumea, the capital, has seen good times. There is evidence on every hand. Hidden away amid rich foliage on the hillside are fine dwellings, once the homes of the officials; the streets are broad, though abominably paved; there are parks, and the bandstand, where, for years, the celebrated Convict Band — brought over from Ile Nou every afternoon — discoursed music for the loungers. There are statues, too, but the stone so worn by the climate that I could not discover by whom raised. There are no guide books, nor any Tourist Association; one has to find out things for oneself. But there is an extra pleasure in the hunt itself. There is the Hotel de Ville,<sup>369</sup> where officials still reign over the sleepy town; there is a very finely situated Roman Cathedral<sup>370</sup> of large proportions and twin towers, a Museum<sup>371</sup> with collections made in the long ago, a hospital,<sup>372</sup> which I mistook for barracks, bare and needing whitewash. On some streets shade from a torrid sun can be obtained from trees planted, but unfortunately oft short of finality. The Flamboyant with its umbrella-shaped top and gorgeous flowering is a fine showing in at least one park. The shops, though well stocked within, have a most dowdy outside, a frontier town on a continent could boast far better an appearance. I was inside many, but found only one up to date; it seemed quite out of place, but a distinct relief from the stuffiness of the rest. The waterside boasts a stone wharf 600 feet long, built by convict labor and is a thoroughly well-constructed piece of work.

<sup>368</sup> See also *Deer Hunting* in the chapter on *South Sea Curios*, in Part XIII, *Roamings In the Great South Sea*.

<sup>369</sup> Now the Musée de la Ville de Nouméa.

<sup>370</sup> [Cathédrale Saint-Joseph de Nouméa](#)

<sup>371</sup> [Musée de Nouvelle-Calédonie](#)

<sup>372</sup> [Centre Hospitalier Territorial de Nouvelle-Calédonie Gaston Bourret](#)

Though the population is nigh 9000, you would never expect it from the streets. By sunset they are absolutely deserted. To take a stroll after dinner is to fancy one is roaming in a city of the dead. But then things start early. Before 5 a.m. I was in the market held in one of the parks. A line of small trestle stalls with occasional booths were being besieged by thrifty housewives. There were most appetizing looking vegetables fresh from the countryside; there were fruits of all kinds; butchers offered steaks — no carcasses allowed — fish in tanks on barrows, all alive : you select your finny one as it swims about; the fishmonger dives his hand in, and you bear off the victim all wriggling on a string or stick. Things hummed for a couple of hours, then the gendarmes took control seeing that all decamped forthwith; the trestles were gathered and stacked; and by 9 a.m. you would never suppose that a market had held the place that morning. If you purpose shopping at noon, you will get a shock. All the shutters are up, the doors bolted and barred; Noumea is taking a rest. At 11:30 it is time to cry a halt, and not till 2 p.m. can you do any business. But why hurry? Tomorrow is as good as today. The Steamer is not in, nor coming yet; letters and orders can wait. It is too hot; get in under the shade and have a nap. Such is the custom of the place — and elsewhere in the South Seas, too — and a very wise one. It is one of the relics of the Golden Age of Noumea.

If that age is to return, both the Home Government and the whole community will have to change. The root difficulty today seems to be that the Home Government will not help and the Community hates taxation. The politics of the place are very lively. Noumea can wake up for such. I was there in the throes of an election, and the French are very voluble and excitable as all the world knows. I could not follow the debate in hotel lobby, in shops, or upon the streets, though both sides would win me and tried hard to show that they were the “it”, the other side, the very devil, but it stirred all New Caledonia up for a while, and that was all to the good.

I went touring Noumea, the capital, strictly on my own, and saw many interesting things. I found the Museum closed for a month. I could not wait so long to see its contents. From a most kindly party — high in power and influence — I got a special permit of which I read that I was a most ‘noble’ stranger and that everything was to be at my command. If that Museum was closed for a Spring cleaning, it certainly needed it, but I fear that it was not so; it is altogether more likely that the Curator was off on a vacation. I longed for a duster and feather broom. It is a shame to have such valuable and charming items in so deplorable a state of dust. The collection of old time native weapons is particularly fine, the mineral exhibit exhaustive; shells are both extensive and excellent, but much that might have been preserved has perished through neglect. The butterflies and moths are mostly pins; the bodies and wings have disappeared. The cloths and many a delicate piece of woodwork are going fast. Whoever is responsible for the upkeep of the Museum needs waking up. It may be lack of money; it may perchance be a divided authority, but that Museum holds treasures well worth preserving which a longer reign of dust and indifference will destroy.

I climbed a hill at the far end of the town <sup>373</sup> — from the summit of which a commanding view of the whole harbor and approaches is obtained — to see the Redoubt which French Army Engineers had built at the time of the Fashoda incident <sup>374</sup> in far off Sudan. They evidently feared trouble from the Australian Squadron and rushed up four mighty breech-loaders to be ready for business. Those big guns are no longer in their proper place, but lie apart from their swivels and emplacement. When the Great War came, they were taken down, lest the German raiding Squadron should claim that Noumea was fortified, and so blow her to little bits. The view from the top was well worth the hot climb, with its vista of big islets and small ones, its summer sea, and the barrier reef breaking in the offing.

---

<sup>373</sup> Ouen Toro, where the breech-loaders have been replaced by World War II cannons.

<sup>374</sup> The [Fashoda Incident](#) of 1898 was the climax of imperial territorial disputes between Britain and France in Eastern Africa.

## The Dreaded Isle

With special permit from His Excellency, the Governor, I crossed over to Ile Nou. There are no prisoners now in the main gaol, that huge compound with its rows of cells, its dungeons horrible, its dark cells still more ghastly, where not only light but all sound is carefully cut off, and to be shut in even for a space is to fancy that you have unconsciously slipped out of life, but with the terror of death still upon you. There is the guillotine looking as ready for business as ever, and methods of punishment that look simple things, but are appalling in their effect on the nervous system. I went where the result is to be seen. A friendly young guard took me round. I was besieged. Here a shaky individual would plead for baccy, here another offered of his handiwork, some showed talent, others none. I went into the sick wards, even approached the cells where, solitary, the craziest of the crazy are confined. And all these are 'in' for the term of their natural life. They have not a ghost of a chance for any more liberty. Here was I, free to roam the whole world over, and these poor humans could never pass those forbidding walls. Was it to be wondered at that I went home penniless; that I regretted that I had brought no more; and that my well-filled baccy pouch was empty, made to go as far as it could by pinches to the hungering. Would that it could have been as the widow's cruse of oil.<sup>375</sup> I have some mementoes of that visit to Ile Nou which I shall always treasure.

## To Bourail by Motor

They boast a line of railway upon the island, a narrow gauge — just a single line — that runs from Noumea to Paita some twenty miles to the north, and the little engines shriek and puff with their importance, as if they were the monsters of a Transcontinental.<sup>376</sup> I looked at the cars in the Station shed hard by my hotel. They were not inviting. I preferred an auto. I took it and had a run that I would go far, very far, to repeat. The distance was one hundred miles north to Bourail — and back — the car was of French make, a Renault; the chauffeur was a Master and spoke broken English charmingly; we had it all to ourselves and the road was perfect. I have been on many roads, even on those unforgettable ones round Honolulu, but this road is their peer. It was built by convict labor, laid out by French engineers; time was no object; work hours cost nothing : after all the years it has been down, it is magnificent. If other things are let slide in New Caledonia, this Highway is not. All the way, the whole hundred miles, men are to be met with at work thereon, touching up the weak spots, putting fresh top dressing on. It is like the old Roman roads of Home, going straight unless compelled otherwise. It is a memory of sheer delight.

We started early, he and I, and bowled along at a clipping rate to Paita, a small settlement of no special interest, then another twenty miles brought us to our first river, which we crossed on a ferry. It was time for breakfast and we took it at the ferry hostel, served by a white-haired veteran who spoke perfect English and whom I took to be at least a retired Colonel bred in France. But no! he was born upon the Island of a mother who was English and who had left her mark upon him. I learned much from him of the early days, the natives, the convicts and the missionaries. He was courtesy itself. Then on to the great Highway again, up hills, down valleys, flying past settlements with names impossible to remember, though Tontouta and La Foa got a hold on me, each with their Gendarmerie, Hotel de Ville and Church; crossed rivers, now by bridges, all iron work and painted red; all the way

---

<sup>375</sup> Widow's cruse: an inexhaustible supply; from the widow's cruse of oil that miraculously supplies Elijah during a famine (I Kings 17:8–16).

<sup>376</sup> See [Les rails calédoniens, 1892–1953](#), by Jean Rolland (Nouméa: Jean Rolland, 2002).

a park land with the Niaouli tree predominant, with cattle browsing, and many horses. The only blot on the landscape was the lantana bush, which, like the deer, was introduced by some unsuspecting mind. Alike as I had seen and personally experienced of it upon Norfolk Island, so here it has in parts overrun the countryside. It is beyond the power of man to stay its growth, its lovely little flowers producing seeds which are borne in their millions by the breeze, to start new patches.

Now really climbing and making double S's so fast that I doubt if we had for all that portion of the way a hundred yards of straight run, we came upon a view that made me exclaim in my very best French, "Halt!" I could not pass that at a rush even in a Renault. Below in the valley was a native Reserve with its huts and its gardens, beyond that, the sea, like a lake, and far out, drawn for straightness as if with a ruler, was a long line of white lying full twenty miles across one's vision, the surf, breaking on the Barrier Reef. And at two spots lay two tiny specks, so far off were they, wrecks, one a steamer, the other a giant sailing vessel, the former long aground, the latter but of yesterday. I put the binoculars upon them and could see all the masts still standing on the sailer. Someday a mighty cyclone will come and lift them off to drop them in deep water, but today they add picturesqueness to that scene. I was told later that even residents find themselves halting where I held up my chauffeur, so I was not enthusing over a 'commonplace'. Then up again we went till at last we saw below us Bourail's Valley. Down into it we went, with more and still more acute cork-screwing. The edge was never very far off; it would go hard with a careless driver, but my man had known that Highway from his babyhood. Now we were on the floor of the valley, speeding past the old time convict farms, tended today by their descendants, still the same splendid road bed, smooth as if we were gliding over ice.

Then with a toot we entered Bourail, a typical French village, but boasting only of one longish street, and drew up at the Hotel Pallu de la Barrière<sup>377</sup> — some illustrious warrior of the past, I believe — my Pension for a while. To a fastidious person I could not recommend that hostel. But to a Roamer, it was good enough. Mine host served at table himself. He was sockless, with slippers down at the heel, coatless, with shirt sleeves rolled up. But he was attentive to his guests and meant exceeding well. You cannot expect May Fair at the East End.

We used it as a base, my man and I. We took a run down the riverside that connects Bourail with the sea, and saw strange works of nature in the form of Giant's Causeways.<sup>378</sup> We saw such relics of the convicts' days as still remain — the Commandant's charming abode, now looked after by a solitary old soldier, the 'Keep' for unruly ones, then made our way to the olden times great Boarding School for boys,<sup>379</sup> on the environs of Bourail, the school, as it came out, of my chauffeur, desecrated by being turned into a canned meat factory, and by the death of that Australian manager again deserted, with no one knows what future now awaiting it. It is beautifully situated in the valley with a fine approach through grazing fields and orchards. Those priests who first built it were not sparing in their plans. It forms a great quadrangle, the main school with dormitories above, facing the entrance gates — this now full of machinery of the canners — around the other sides of the square are the Hospital, the Curé's house, the Church, the Manual Training building, and Outside Playhouse roofed from Sun and Shower, Glass Rooms for special students, and the Masters' homes. Here all the elite of New Caledonia for years sent their sons, 150 of them at a time in those golden days, and my man spoke lovingly of the good time had, and led me to the playing fields and the great Mango trees and the

<sup>377</sup> Contre-amiral Léopold Pallu de la Barrière (1829–1891) was [Governor of New Caledonia](#) from September 1882 to July 1884.

<sup>378</sup> The [Giant's Causeway](#) is an area of about 40,000 interlocking basalt columns, the result of an ancient volcanic eruption, located on the northeast coast of Northern Ireland.

<sup>379</sup> L'école de Néméara.

orchards, where he and his had sported and had fed. When convictism ended and the officials went, the school had to close down. And now a canned meat Factory! and probably next a Ruin!

The third day we turned home. I begrudged again every mile of that convict road. Yet Bourail apologized for it, regretted that late heavy rain had sadly marred it. I could not see it that way; it seemed to me impossible. The hundred miles back was all too quickly covered. We ran over no one, not even a scared chicken; we collided with nothing though cows have absolutely no sense and calves crave for suicide, and best of all we had no one to say whether or not we exceeded the speed limit. We had a glorious run, and what pleased my man even more than the many francs I paid him was my combined French and English outburst as we parted at my door, « Vous êtes un chauffeur truly magnifique. » I feared he might — with French effusiveness — embrace me. He is very stout. I headed him off by a sudden inspiration, hiring him then and there for the next day to visit Our Lady of Lourdes and the Convent of the Conception, and thither we went accordingly.

### Saint Louis

The former is connected with the native village of Saint Louis. It lies on a plain a few miles out of Noumea. Roman priests in the very first days evidently proposed to form a Christian settlement where natives should be withdrawn from all evil association with white folk, and they themselves live in Community with business to hand of an earthly character for self-support. They chose rum for a business and went at it with great thoroughness. They chose the site because of the flat country for sugarcane and the irrigation of the rice fields, the latter to be food for both natives and themselves; they had a beautiful stream running down from the mountains at the back with flat land well covered with trees on one side of its banks for the site of the village for those natives who were willing to come under their influence. On the other side of the stream, on the much higher bank, they erected their dwellings, their Church and their Factory.

Diverting the river some miles back as it comes down the mountainside, they led a portion of it into a canal which they constructed. This leads to the Factory and turns a huge water wheel with which all the machinery is connected. To roam over that building is to be forced to admire the industry, the ingenuity and the capability of those priests both of the years past and of the present day. They have added a Printing Press and publish a paper regularly. There is native type, as well as French, and natives set up both with equal facility. Today they have their own electric light. From the first they have had a school and have trained natives as Teachers, sending them out to the back parts of the land. They have constructed a system of irrigation for their large rice fields, and what with their own cattle, gardens and orchards, seem to be completely self-supporting. The native village itself is very neat, the houses well built and all the inhabitants seen were as happy featured as sandboys.<sup>380</sup>

Some short distance up the charming stream, a Grotto, well raised from the river, though but a few yards from it, has been bored out by torrential rains of ages ago. In a niche of the same there was placed an image of the Blessed Virgin and thither the pious have ever been wont to wander to tell their beads and have a quiet think on things divine. To this spot a few years back a paralytic native of the village nearby painfully wended his way as his custom long had been, and praying, lo! he felt his limbs live once again. He dropped his crutches and walked to the village a perfect man again. Those

---

<sup>380</sup> *As happy as a sandboy* means to be very happy and content. *Sandboy* was the name of those who delivered sand to public houses, theatres and homes in the 18th and 19th centuries, for use as a crude floor covering. Most *sandboys* were adults; *boy* refers to low-status male workers.

crutches hang in the Grotto's roof today. Thus has the grotto taken the name of that famous European one — and even the hardened sceptic must allow that a strange thing there occurred.

The Church of this community is a large one for its situation, within a comparatively small population, but I was told by a very kindly lay brother, who escorted me round, that many come for worship from the surrounding country. It surely must be for those outsiders — not for those well trained villagers — that as you enter the building, you are met with the startling appeal, "Please do not spit in this Holy Place." Even the most case hardened American would surely stop at that.

That native village of Saint Louis is an interesting spot to see, and those priests and brothers are to be admired. But though the Romanists are, as is evident, here and in many other instances upon the island, doing good work, they are not the popular religious system. For some reason, maybe that the Protestants were the pioneers, which as a fact they were, or that their form of worship and requirements of their followers appeals more intimately to the heathen mind, the latter have far more adherents. But mere acceptance of an outward form is not real religion. To just what depth Christianity reaches in the native's mind is what many of us would like to know. I have seen the various Churches at work in many parts of the South Seas, as well as elsewhere; I have watched the lives of those who are accepted followers; whether more than that civilization which accompanies Christianity has really reached them is, with me, a matter of doubt. White folk, however, cannot throw stones. We have no right to expect more from those brought out from savagery than from ourselves. Till white folk are truer to their Christian profession, we had best suspend judgement on our dark-skinned brethren.

The Convent of the Conception is not far from St. Louis, and is for girls, not natives, however, but rather for the children of white residents, not only upon New Caledonia but many of the adjacent islands. From the New Hebrides and the Loyalties they come, and many a woman today owes much to those gentle sisters who trained them. The Sister whom I met at the Convent door spoke the purest English; she turned out to be an English woman born in Fiji, had spent thirty years at this Convent and purposed to die in it. But what I sought was not the Convent or its School, but to have a look at the Curé's Museum, and it was well worthwhile. It has taken him a lifetime to collect. He is a Curator of quality. Noumea's Government Museum is neglected, the Curé's shows a most loving care. His speciality seems to be what the sea holds in shells and coral, but there are terrible looking weapons gathered by him as he passed his earlier years roaming over New Caledonia, with sheafs of arrows labelled Poison. He has idols, too, and hideous dancing masks, and a useful bibliography of his Island home. He is an old man now. He gave me courteous greeting, "I am too old and weary to take you round, but enter Monsieur and enjoy." So he left me to myself and I enjoyed my stay, for everything was labelled with its story. The Curé thanked, my « Chauffeur Magnifique » drove me home, and we parted, to meet no more.

### **The Expense Account**

Prices struck me as ridiculous. I happened along when the franc was hovering around 90 to the £. Those possessed of English money had an easy time financially. Our cash went far; we got enormous value for our money. Small French coinage as change seemed scarce. I did not haggle over it; when a franc is less than threepence, the centimes become infinitesimal. For themselves they still use, as they did in war times, postage stamps stuck on circular pieces of cardboard, enclosed in a metal disc the size of an English penny, and stamped at the back with the name of the only Bank on the Island, that of Indo-Chine. What I got, I have kept as curios.

## Heat, Natives and Records

New Caledonia is outside of the hurricane belt, but it is not free from cyclones. It is only just within the tropics and therefore cooler than the New Hebrides. It can be as hot occasionally. One wants no worse than 98 degrees at any time. Luckily the mean is but 72. It is also wholly free from malaria. One can dwell in safety there.

As to the natives, their features are markedly Papuan. They are a strong, virile race and if they were not so indolent, they might be expected to increase in numbers. Their place as workers is taken by a motley crowd of Tonkinese, Javanese and Japanese.

The Records show that there were, at one and the same time, 17,000 convicts on the Island. They have passed, but their place has been taken by their free fellows to that same number. It is not a bad beginning of a better day; it shows the benefit of a settled Government as against such conditions as today exist on the neighbouring Group of the New Hebrides. In the latter there are but five hundred white folk, nor will they increase till there is one Power alone in the saddle and security of tenure assured.

I was privileged to see and learn somewhat of the South and West coasts. Those who would see the East and the North have to rely upon a small schooner, which plies thither monthly. It dodges in and out of the Barrier Reef and plays hide and seek with the numerous lesser reefs within. Such steaming has perforce to be done in daylight when either the surf can be seen or the difference in the color of the water tells of safety or of danger. At the southern end where traffic regularly passes, there are lighthouses, but elsewhere trade would not warrant the expense. That on the reef ten miles out from Noumea, where the pilot is taken on or dropped, was given to the Island — an Imperial gift — by Napoleon III.<sup>381</sup>

It was the great Barrier Reef I wished to see to the West, and sail inside of its placid waters along more than a thousand miles of Australia's coast, and so through the reef strewn Torres Straits to Singapore and Home.

---

<sup>381</sup> [Le Phare Amédée.](#)

## THE GATEWAY : SINGAPORE

### The Where and What

If you will look at a map of the Malay Peninsula — and without a clear grasp of the whole geographical position, no one can hope to properly understand not only the Present, but the Past and the Future of Singapore — you will note, high up on the West Coast, the Island of Penang, with Wellesley Province on the mainland opposite. These are painted red.<sup>382</sup> Going south, on the same coast, you will find Dindings,<sup>383</sup> and still further south, Malacca Town and Territory — both painted red. Still further south, off the southernmost tip of Asia, you will find Singapore. This is the last red spot along the Asiatic Coast till, sweeping your eyes up full 1400 miles, you come to Hong Kong Island, with its large slice of leased territory on the adjacent mainland. There is a continuity about these spots which must needs be understood.

A further need — dealing immediately with our special subject — is to clear one's mind of a more than likely confusion of the word "Singapore". Correctly speaking, "Singapore Town" is a city of 420,000 inhabitants, situated at the extreme south of the Island, and, though spreading out along the coast, occupies but a very small portion of the Island itself. "The Naval Base" — so much on men's lips today — is not, as generally supposed, an adjunct of the Town, but a thing apart. It is a portion of "Seletar", a district of the Island lying in the North East, and the nearest point of the "Base" to the Town I should judge to be a good ten miles. Being told of the connection of the Island with the State of Johore by a footway, I had imagined that a natural Low Tide Isthmus had been built up to serve as a regular means of communication between the two. It is not so. The Strait of Johore, which lies, like the wood of a full strung bow, all along both the West, the North and the East Coast of the Island, is at no portion very wide, possibly, from what I saw, two miles at the utmost. Where the Crossing has been made, it is not more than three-quarters of a mile, and a handsome rock Causeway has been constructed — at much less cost than expected, owing to a natural rock foundation being found — one side of which is given up to the railway connecting Singapore with Penang Island, the rest for the use of the pedestrians and traffic.

A further necessity is to clarify the term "Malaya" and to warn against the confusing of Malacca with Molucca. "Malaya" is a generic term for the whole of the Peninsula reaching up to Siamese Territory. The inhabitants are a race to themselves. I am not disposed to enter into the discussion of the perplexing question of their origin, on which opinions widely differ, but they are not Papuans, nor are they either Polynesians or Chinese. They are Malays, and there are millions of them. Malaya has many states. Before the British came upon the scene, these were in a constant state of chaos and warfare. Today Malaya may be summarized under four heads : (a) the British Crown Colony, which includes Penang, Province Wellesley, the Dingdings, Malacca and Singapore — known to the world as the "Straits Settlements"; (b) the Federated Malay States, which include Perak, Selangor, Negeri Sembilan and Pahang;<sup>384</sup> (c) Johore, which is a British Protectorate; and (d) Independent States, over

---

<sup>382</sup> The areas of the [Straits Settlements](#), and other British settlements, are depicted on maps of that time in red. Originally established in 1826 as part of the territories controlled by the British East India Company, the Straits Settlements came under direct British control as a crown colony on 1 April 1867. The colony was dissolved in 1946 as part of the British reorganisation of its southeast Asian dependencies following the end of the Second World War.

<sup>383</sup> [Manjun](#), Malaysia.

<sup>384</sup> The [Federated Malay States](#) was established by the British government in 1895 and lasted until 1946, when they, together with the Straits Settlements and the [Unfederated Malay States](#), formed the [Malayan Union](#). Two years later, the

which Siam claims suzerainty, but which one of them, Terengganu, steadily refuses to recognize in the slightest degree.

Malacca is British; Molucca, or, more correctly, “the Moluccas”, is Dutch.<sup>385</sup> We have noted where the former lies; the latter is but another name for the Spice Islands, that coveted possession in the Long Ago, and is the Group of Islands in the Banda Sea, lying between the Celebes and New Guinea, with the Philippines to the north and Australia to the south.

As to the individuals, I doubt if the name of Raffles<sup>386</sup> is at all widely known, nor that of Light,<sup>387</sup> yet these men did noble and enduring work for the Empire in Malaya. It is only right that we should know to whom we are debtors, and pay our tribute — however small — to their memory.

As I stood before the statue of Sir Stamford Raffles in Singapore, I looked long at that clear, thoughtful face, and tried to visualize all that he went through for the growing Empire he so devotedly served. My respect grew as I looked into and learned more and more of him.

### A Note of History

For long years before any European sailed upon the waters of the Indian Ocean, Arab dhows had been traversing that sea to India, Malaya and the East Indies, gathering their treasures of silk and spices, with a host of other things, and by way of Asiatic Turkey pouring them into Europe. There they found ready purchase. Whence they came was much on Europe’s mind. That mysterious land to the East!

Where was it? What was its name? Men did not think seriously of finding it till Turkey suddenly blocked the passage of the goods across the Bosphorus and the Mediterranean. It would take too long to explain that Turkish action. It was a severe blow to Europeans. They had got used to rugs and silks, and seemed utterly lost without those spices. It must be borne in mind that in those far off days, food was far from palatable. The meat was mostly salted. We of today have relegated spices to very small proportions in our culinary. In those days they were all important. The matter was vital. Europeans must have them. The country whence they came must be found.

The great navigators of that day were the Portuguese, and the Spaniards not very far behind them. They dared not — till the intrepid Columbus appeared — sail west; they could not sail east, so they made their way south. It took years to creep down the coast of Africa, even that meant daring of the highest kind. At last, Vasco da Gama<sup>388</sup> rounded the Cape and sailed into the Indian Ocean. Here — though he saw but a waste of waters — he knew a new world was opening to him. What it contained was not long in the finding and Trading Posts — Factories they were called — set up. Portugal and Spain kept their mouths shut. Once again the all needful spices and luxuries of old were upon the market, but from whence those Iberian navigators brought them was a mystery unsolved.

---

Union became the [Federation of Malaya](#), and finally [Malaysia](#) in 1963 with the inclusion of Sabah (then North Borneo), Sarawak and Singapore. In 1965, the Malaysian parliament voted 126 to 0 to expel Singapore from Malaysia; [Singapore](#) gained independence as the Republic of Singapore, remaining within the Commonwealth, on 9 August 1965.

<sup>385</sup> And part of the [Republic of Indonesia](#) since it gained independence in August 1945.

<sup>386</sup> [Thomas Stamford Raffles \(1781–1826\)](#)

<sup>387</sup> [Francis Light \(1740–1794\)](#)

<sup>388</sup> [Vasco da Gama \(ca 1460-1469 –1524\)](#)

The Netherlands were an appanage <sup>389</sup> of the Spanish Crown. The bigoted Philip, <sup>390</sup> in an evil hour for his country, determined to stamp out the Reformed religion of his Dutch subjects, and went at his task relentlessly. The Dutch were no match for him on land, but they took their revenge upon the sea. Steadily for years past, they were becoming more and more good seamen, and were at that time the cargo carriers to all Europe. They now burst forth as Pirates and roved the seas, attacking everything that was either Spanish or Portuguese, which now were one kingdom. Not content with daring deeds upon the seas, they sailed into the home ports of their great enemy. Of course, they had lost the carrying trade. They seized what they could of the supplies from the East as the ships bearing them drew nigh to Portugal and Spain, but the bulk reached safety, and those countries fattened whilst the rest of Europe starved.

It was then that the Dutch determined to find out the secret for themselves, and to wrest the possession of that delectable land from the enemy. Houtman <sup>391</sup> led the way. He was a lucky find for his country for he had sailed for years under the Portuguese flag. Another Dutchman — Linschoten <sup>392</sup> — had lived for fourteen years in that wonderful land, and happened to get back home just then, whilst some Englishmen had wandered out and returned, their experiences appearing at a very opportune time in Hakluyt's famous Book of Voyages. <sup>393</sup> By these means the Government knew that it was not one country from which these treasures came, but many, and that not only countries, but islands, seemingly unaccountable, and the land of all lands were "the Spice Islands". Into the East they sailed and made short work there, fastening specially upon the Moluccas, which, from that day, save for a temporary holding of them by ourselves, have been a part of Holland's Outer Empire. For in truth the Dutch East Indies is a very Empire in size. Count Russia out, and those Indies would cover half of Europe. British folk knew all too little of that great territory of the Dutch, nor do they at all realize the gift for Colonial Government which the Dutch possess. It certainly was a revelation to the writer as he roamed through Java and other isles. The Dutch thus had their revenge. Spain and Portugal were dispossessed; the Hollanders were paramount in the Far East.

## Britain Steps In

And what of Britain all this time? She was not biding her time; she simply was not awake. At last her predestined hour struck and she awoke to right good purpose for herself, the whole world over. But our theme confines us to Malaya alone.

It was from India — in the form of the British East India Company — that we stretched out our hands for a portion of the trade, which, from its enormous volume Holland — in the form of the Dutch East India Company — could not possibly entirely embrace. That Company possessed a Trading Port at Malacca, which they had taken from the Portuguese. We must needs find one, but where? We had no quarrel at that time with the Dutch on which, in turn, to wrest Malacca from them, and the Malays were not only strangers to us, but themselves were in a state of chaos, chief against chief; the door all along that Malayan coast seemed closed. It fell to the lot of one who had served as a midshipman in

the British Navy to solve the difficulty and take the first step towards Singapore, and the mighty power we wield today throughout Malaya. How few know his name today!

### Francis Light

Francis Light was an Englishman, and all records show him to have been a man of kindly thought and sternly honorable. He had served on H.M.S. *Arrogant*, but, giving up the Navy, had journeyed East and became Master of a trading vessel. He had established his headquarters off the coast of Kedah on Malaya, at the Island of Salang,<sup>394</sup> which lies north of the Island of Penang, and had become a persona grata with the Sultan of that State, the owner of both islands. In 1771 Light had proposed to the Governor General of Bengal — the famous Warren Hastings<sup>395</sup> — to obtain the cession of these islands for the Company's use, but European affairs put a stop to the project.

In 1786 it was seen to be imperatively necessary to have some spot between India and China for the Company, and ship masters were ordered to look out for the most suitable site. Light now took definite action. He approached his friend, the Sultan, and bore a letter off, to Calcutta, signifying the willingness of the Sultan to cede both islands. Salang was declined, but Penang readily accepted, and Light returned to hoist the British Flag on Penang, August 11, 1786. The troubles that ensued upon the mainland owing to Siam's pretensions are beyond our present purpose.

In 1800, by a further treaty with the Sultan and Penang's new Lieutenant Governor — Sir George Leith<sup>396</sup> — the strip of territory now known as Province Wellesley<sup>397</sup> was added, by reason of the need for cattle grazing ground and timber.

Thus was the beginning made, and to Light's genial character — which won the heart of the Malayan Sultan — we remain to this day hugely in debt.

Prior to our possession of Province Wellesley, Malacca comes upon the scene. The Town as we have seen was founded as a Portuguese Factory, seized by the Dutch and seemed likely to remain theirs. Fate decreed otherwise. Napoleon was threatening Europe and Holland seemed likely to be absorbed by the all conqueror. We took time by the forelock and on behalf of the Stadholder at Home — but without first asking his leave — took possession of the Post in 1795 with the forces of the East India Company, the Dutch on the spot misinterpreting our intentions and offering some resistance. By the Treaty of Amiens in 1801, it was restored to the Dutch, the danger seeming to be over. But Napoleon again threatening, we again took it in 1807, restoring it once again in 1818. By exchanging it for certain ports in Sumatra — which lay opposite — greatly desired by the Dutch, we got final possession of it in 1825. All this chopping and changing makes very interesting reading — together with the addition made to the Town itself of the Territory beyond — but it is outside the story of Singapore.

It was because of pirates' attacks both on British vessels and the Malaysians themselves, who would fain dwell peacefully at the mouth of the Perak River, that police stations were settled at the Dindings, the best spot handy for operations. This with the full concurrence of the Sultan of Perak. But this Red

Spot upon the map was a matter of much later years, near present times when a British Resident <sup>398</sup> was the accepted philosopher and friend.

We come now to Singapore itself. But how comes Sumatra into the limelight and our ability to trade in Posts there, for was not Sumatra Dutch? That Island, then not Dutch, but now wholly so, played no small part in the selecting of our present Gateway to the East, and we must glance rapidly at certain events in measure connected with Sumatra, which brings the great Pro Consul Raffles before us.

## Raffles

He had been at work for years in those far waters before Sumatra saw him. His rise from the ordinary ruck at Home and abroad had been rapid and entirely owing to himself. Raffles was born at sea, the son of a Master of a West India man. At fourteen years of age, he became a clerk in the London Offices of the East India Company. When twenty-four, he was sent out to Penang as an Assistant Secretary. He might have, like hundreds of others, then given faithful service, served his time, retired, or died at his far post, and passed away unknown to coming generations. But he was made of other stuff. Quiet and unassuming, he made up his mind that he would become really efficient. On the voyage out, he began the study of the Malay tongue, and, once arrived, he devoted every leisure hour to the study of the people, their literature, their customs and their idiosyncrasies, a study which he continued to the very end. And best of all, like Light before him, he won the confidence and warm love of the Malayans. He was quietly at work when there came across his path the needful man to lift him out of the ordinary ranks of the Company's servants and start him in his real career. Dr. Leyden, <sup>399</sup> a famous Oriental Scholar and Scientist, met the young clerk on a visit paid by him to Penang in search of health. He was so much struck with Raffles' knowledge not only of Malay, but of Science generally, of which he had ever been a diligent student, that upon his return to Calcutta, he brought the young man to the notice of Lord Minto, <sup>400</sup> the Governor-General, who esteemed the great Scholar very highly. Called to India, he returned to the Strait with the title of Governor General's Agent in the Eastern Seas, and by the age of thirty, he was a real Power in those seas as the Lieutenant Governor of Java. How this post for Raffles came about, it is necessary to briefly relate.

Napoleon was again (1807 to 1815) rampaging over Europe. Now actually holding Holland, he was planning the possession of the extensive holdings of that country in the Far East and thus striking England in the back. The British knew this and purposed to forestall him. Mauritius was already in our hands, which meant crippling our great Enemy's attack. Lord Minto wasted no time. Raffles was instructed to prepare the way by collecting all necessary information. Minto met Raffles at Malacca, temporarily British, bringing with him 6000 British and 6000 Indian troops in 90 vessels. As Chief Intelligence Officer, Raffles accompanied the force, which, landing at Batavia, fought but one battle — that of Cornelis — losing 500 men against 4000 of the obstinate Dutch, who were at heart with the French, and remained, after Lord Minto left six weeks later, as Lieutenant Governor of the Dutch East Indies. For five years he ruled and his rule was good, so good that when the Dutch returned, his policy both as to land and people was largely continued — a former system of oppression giving way to Raffles' enlightened ideas, which has resulted in the present day's Administration, cause for the wonder and admiration of every traveller.

---

<sup>398</sup> WWB may be referring to [Sir Hugh Low \(1824–1905\)](#).

<sup>399</sup> [John Leyden \(1775–1811\)](#)

<sup>400</sup> [Gilbert Elliot-Murray-Kynynmound, 1st Earl of Minto \(1751–1814\)](#)

At Buitenzorg, <sup>401</sup> in the lovely Botanical Gardens, famous the world over, there is a grave kept in the most perfect order by the Dutch in grateful memory of a noble Ruler, even if an Enemy, a chaste circular arbor of stone covering the remains of Raffles' first wife. He was a Knight now, and she was a Lady. He was to leave four children in Sumatra's soil ere he went home to die; his second wife had one daughter — who had been sent to England previously — alone surviving him.

He had his sorrows, even if he had his triumphs. In 1816 he went home on furlough. Upon his return, he found Minto gone and those in power in Calcutta not in sympathy with his policies. They sent him, therefore, as Lieutenant Governor to Bencoolen <sup>402</sup> in Sumatra, the spot from which so much of that island as had been tamed was ruled, a wretched, out of the way spot. But even from there, his restless energy sought the good of his Company and Country, and soon those in power had to fall back on him.

Java, but not England's hold on Sumatra, was given back to the Dutch by the Treaty of Vienna in 1818, and some spot had to be found in the Straits other than and south of Penang — for Malacca had been likewise restored — as the site of a British Settlement to make up for these losses, and counteract the determined exclusiveness of the Dutch. Raffles looked around. He marked certain spots as likely (but not Singapore). His advice was sought. He went to Calcutta. Then things began to happen. He returned to the Straits for action. Colonel Farquhar, <sup>403</sup> who had been the Resident at Malacca prior to its return to the Dutch, had been given instructions to find a site. He had tried to secure the Island of Bintan in the Singapore Straits, south of the Malacca Strait, but the Dutch had forestalled him. He was told to put himself at the disposal of Raffles. The latter, picking him up on his way back, made for Siak on East Sumatra, which was in his mind. It was not suitable, nor were Farquhar's suggestions of the Karimun Islands. He then sailed for the south coastline of Johore. I quote here from one of his private letters to show that he had not labored in vain at his Malayan Studies : "But for my Malay Studies I should hardly have known that such a place (Singapore) existed. Not only the European but the Indian world was ignorant of it." He went ashore on the Island, then almost uninhabited. At once its advantages appealed to him, and, with his usual promptness, he acted, making a preliminary arrangement on January 30, 1819, with the local Chief, and realizing that this, to be binding, must be confirmed by the Sultan of Johore, he required that party very urgently. It happened that there was a dispute going on as to who should succeed the Sultan, lately dead. The elder son had been passed over by the influence of the Dutch and the younger installed. The injured one was on (Riau) Bintan, one of the many nearby islands. Raffles sent for him, had him proclaimed on Singapore Island as Johore's rightful Sultan, recognized him on behalf of the East India Company, and drew up a Treaty which was signed by Sultan, Chief and Raffles. That was on the 6<sup>th</sup> February, 1819. Singapore was ours.

Yet, strange as it may now seem, with all the resultant benefits before us, Raffles had no easy time to hold what he had gained. The opposition came from his own superiors. The Governor General sent instructions countermanding all his orders to Raffles to find a site. The Dutch were protesting as soon as Raffles left Bencoolen. If Raffles had not actually found a site, he must desist. But he had found it and meant to keep it. The Company at Home, on hearing of it, was furious, and the Ministers of the Crown were likewise. It was hard work for Raffles, away off in Eastern waters, to labor to convince all these high Powers that he was right. But his usual quiet persistency won the day, though the worry, without doubt, helped to bring him to his early grave. If Raffles' hand had been lifted off Singapore, it would be Dutch today. They saw, too late, that he had got the key to the whole waters. They had

---

<sup>401</sup> [Bogor](#), Indonesia.

<sup>402</sup> [Bengkulu](#), Indonesia.

<sup>403</sup> [William Farquhar \(1774–1839\)](#)

had a century and more to find it. This young man, who had been but fourteen years in the Far East, had won out for his Country for seemingly all time.

Raffles went back to his lonely post on Sumatra, leaving Farquhar in charge. He had, before his leaving, taken an action of immeasurable importance to the infant Settlement, proclaiming Singapore an Open Port, free to all Nations, and without tax on trade or industry. Who, knowing these things, can deny that Raffles well won his Knightly Spurs, that he was a great Englishman, a great administrator, and worthy of a wider renown than he holds amongst his nation of today.

He visited Singapore but three times on the four years he remained on Sumatra, whence he sailed for England for the last time, but all those tender years of “his own child” as he was fond of calling Singapore, he watched and counselled its growth with the intensest interest, and as it grew year by year with astonishing rapidity, his joy was abounding. His City gave him a glorious Farewell. They, as least, knew his worth.

When he reached Home, it was to meet charges from his late employers, which exhausted a frame already undermined by continual attacks of malaria, and within two years, when but forty-five, he was dead. The time came when men at Home began to realize his worth. They sought his grave in Hendon Cemetery; for long years it could not be found, and then only by happy chance was the discovery made. But the Gateway will never forget him. Singapore is Raffles, and Raffles means Singapore, and though he has passed in the flesh, his Statue looks ever towards and watches, by night and day, those Straits which his genius and foresight secured for the Free Trade of the Land of his birth, and that of all Peoples as they will.

The Statistics of Singapore are not my theme. The Year Books can far better supply them. Its gradual development can be read of in books written by the men who have lived there and helped make it what it is. I have attempted but a sketch of how Singapore is ours today, and a brief outline of the man to whom we owe it. Happily he has his Biographers. They should be read. You will learn not only to admire, but to love the man. His tireless work, apart from his settled duties, amazes one, and yet tragedy followed him even there. He set sail for Home with the accumulation of years of work and careful study. Every MSS, every map, his collection of Fauna and Flora, as well as all his Records, were burned at sea. Those wonderful treasures of Malaya and the East Indies are lost forever. But Singapore abides, and that surely is sufficient glory for a man.

Bencoolen now is Dutch, along with all of Sumatra, though it cost the Dutch thirty-three years and millions of Florins to win out over the wild tribes. We gave Sumatra up for Dutch possessions on the West Coast of Africa, which cost us the Ashanti War; which was the best bargain 'tis hard to say.<sup>404</sup> Opinions differ.

## Singapore Town

The former history of Singapore Town is somewhat hazy. There seems to have been a considerable Town in the Long Ago, for Japanese records proudly tell of an attack upon it by them in 1365 of our era, when it was wiped out. But it evidently grew again, for in 1552 the famous missionary, St. Francis

---

<sup>404</sup> The [Anglo-Ashanti Wars](#) were four conflicts between the Ashanti Empire, in the Akan interior of the Gold Coast, now Ghana, and the British Empire in the 19th century between 1824 and 1901; WWB is referring to the Third Ashanti War.

Xavier,<sup>405</sup> wrote from it to his brethren in Goa on the Malabar Coast of India. But evil times surely fell upon it again and remained, for when Raffles landed, he found it but a fishing village of 150 people and the resort of pirates, who fared forth from its harbour to prey upon the vessels passing through the Straits. By the last census obtainable, the 150 have grown into 19,000 Europeans, 32,000 of India and Arabia, 54,000 Native Malayan, and 315,000 Chinese.

Singapore Town is a hive of industry, the harbour crowded with steamers and sailing craft, the streets alive with rickshaw runners, many magnificent buildings, cricket and football games in the very forefront of the city, splendid esplanades; no traveller but can find all needful shops and comforts handy, with much both to interest and amuse him. Each of the above divisions of the population have their special quarters, but the wealthier residents of each of the nations have their homes outside the City proper.

### Around the Island

A motor car bore me around the Island and I did not miss much for I was in no great hurry to depart from such a spot. It must suffice here to speak of the great Rubber Plantations which dot the Island, carved out of the Jungle of which many square miles remain, all matted with vine, impenetrable, the haunt of monkeys in special, but I was told of tree bears and cats. The axe has carved a way for roads, and good roads too, to every part. There is difficulty of drainage in the Town, but no lack of purest water, which is obtained from three reservoirs back of the Town, each fed by springs within them, the hemmed in waters lying in park-like places, made so by the hand of cunning landscape gardeners.

The private residencies of the British, which one would expect to see of a wealthy community who have plenty of room and an ideal site of slow rising heights, are there, houses — sometimes mansions built to suit the Tropics with carefully kept gardens, and tennis courts attached. But to note the splendid abodes of the wealthy Chinese and Arabs is somewhat amazing. It was in land speculation, in chief, that these made their pile. Land is very valuable on Singapore, especially in Singapore Town and its environs.

I came early to the conclusion that it is hot on Singapore, very hot, in fact broiling — even at night one has to keep the fan full blast — but it is a lovely land, and one that lingers in the memory and will always be a pleasure to recall.

### The Naval Base

My interest, deep as it was in the Island and the Town, was, however, largely centred in the Naval Base of which we have heard so much.<sup>406</sup> At last I was in Singapore and could see the Debateable Thing for myself. It was a Joyride all through as I spun along the roads, which more or less bound it on three sides. The first leads you straight from Town to the Base's eastern limit. The 12<sup>th</sup> mile post

---

<sup>405</sup> [Francisco de Jasso y Azpilicueta \(1506–1552\)](#)

<sup>406</sup> Originally announced in 1923, while WWB was on Niue, the construction of the [Singapore Naval Base](#) proceeded slowly at Sembawang, at the northern tip of Singapore, until the Japanese invasion of Manchuria in 1931. It was completed in 1939, at a staggering cost of £60 million.

gives the first sign, for here the Rubber Plantation, part of which has been absorbed into the Base, shows signs that the trees are no longer cared for, the undergrowth springing up thickly. There is no fence as yet; the whole large area shows to the passing observer, no work yet done upon it, though there maybe where I could not reach to. But I was to see later and outside of that area where foresight had already provided for the needs of the Navy.

That first road ends at the water's edge. You stand by the Strait of Johore. Guarding the entrance is an Island at no great distance, and well up the Strait on the Johore side is a commanding hilltop. If ever the Base has to be fortified, here are spots ready to hand, than which, to a layman, none could be better placed or suited. I have no doubt that attack could be warded off as readily from the other end of the Strait.<sup>407</sup>

I strolled along the waterfront of the Base, the calm waters of the Strait between me and the State of Johore, a British Protectorate be it remembered; saw where local gossip says the floating Drydock — at this writing being towed out from the British yards — would be located; and thence to the reported site of that much debated point, the graving Dock.<sup>408</sup> Nature seems ready to lend a hand for the river, which runs out here, can readily be diverted to another close to its head, and its mouth looks admirable for the purpose. The whole waterfront is wild and unkempt now, but once operations really begin, the place, now held by Nature, will be cleared, and in place of woods, workshops will make the spot alive, whilst residences for the officials and the employees will readily find ideal sites a little back from the water.

Thence I worked back by a crossroad through the Jungle to the Causeway at the western end of the Base, and promptly forgot naval matters in the sight before me.

## Johore

Across that bridge of rock lay Asia. I had but lately stood upon the Australian Continent. What could I do? How could I resist when Asia beckoned? I ordered, "Straight ahead." I was there in no time, got out, and strolled on yet another Continent.

I found at the Johore end of the Causeway that a small canal had been constructed, so as to permit vessels, of a very limited capacity, to pass through. We crossed it by a swing bridge, and at once ran into the blue-coated and brass-buttoned natives, the Customs Officers. With a wave of the hand, they let us through and we were in Johore Bahru, the Capital.<sup>409</sup> Here dwells the Sultan,<sup>410</sup> whom we had just passed in his car upon his way to Singapore. He is a very up-to-date monarch of fifty years of age, though report says he has his weaknesses, and being a monarch would fain have his way. Therefore he is not a Persona Grata in the British Town. Whatever he himself is, his Palace and his gardens are most captivating. He boasts a special and a magnificent Banqueting Hall and his own private mosque, big enough to hold a thousand, for he professes Mohammedanism as most Malays; he has his private golf links, too. His capital is well planned, with wide and well kept roads, a wealth

---

<sup>407</sup> The Naval Base was defended by heavy 15-inch naval guns stationed at Johore battery, Changi, and at Buona Vista Battery. After the fall of Malaya on 31 January 1942, the base was subsequently captured by units of the advancing Japanese Army and remained in Japanese control through the end of World War II.

<sup>408</sup> The King George VI [Graving Dock](#) at the Singapore Naval Base was the largest drydock in the world at the time.

<sup>409</sup> [Johor Bahru](#) is the capital city of the state of Johor in southern Malaysia, north of Singapore. Johor Bahru is the southernmost city of the Eurasian mainland.

<sup>410</sup> [Sultan Ibrahim Iskandar Al-Masyhur ibni Abu Bakar \(1873–1959\)](#)

of splendid trees, and many ornate private residences. Palms seem everywhere, as fine Travellers Palms as I have ever seen.

Had Time allowed, I would have pushed up north to have a look at the interior of his State, but after a well served meal at the leading Rest House — as all the hotels in this Sultan's land are called — and an exhibition of jugglery and Sleight of Hand on the part of a wandering Conjuror upon the steps of the hotel, we turned our face towards Singapore. I noted, however, ere leaving the caravanserai, the stringent "Rules of the Rest Houses" of Johore, one especially remaining on my mind, that if any single traveller should be occupying a double bedroom and a married couple should come upon the scene at any hour of the day or night, the single individual, be it whom he may, must give up the room and find what else he can in the way of accomodation.

The road across the Causeway leads straight to Singapore Town, fourteen miles away. Some halfway along, we came upon Naval foresight in the shape of a dozen huge Oil Tanks, or more perhaps, for I could not count them all, so imbedded are they in the Jungle. They and their contents — for they are full — must have cost a pretty penny. The railway passes them, which makes it easy to supply ships, be they at the north or the south side of the Island.

Such, then, is the Naval Base at present. That it may be put through to completion in due time, everyone conversant with Singapore and its Straits devoutly hopes. I met no one, not alone in Singapore, but in New Zealand, Australia, throughout the Indies, and all along the whole China coast up to Japan, but was insistent upon the need of that same Base.

### **A Saint and Monkeys**

The day's sightseeing was, however, not quite complete. There was another side of Singapore's nigh half million population that I was to see — the Religious. It burst suddenly upon me. In a clearing at the side of the road there lies a grave. It is that of a Holy Man. Some years ago, the skeleton of a man was discovered in the Jungle hard by. None recalled any loss. The bones, said the priesthood — who saw a good thing in sight — must be of one who in the Long Past had retired into those deep woods for meditation on Things Unseen. This was taking much for granted, but the Malayans swallowed it. A grave was dug, and the people flocked thither to gain the blessing of the Saint. I saw them there that day. They bring their sick, and make offering of both money, food and incense. It is a real thing to those simple folk. I saw a mother bring forward her girl of five or six years. She stood at the end of the grave behind her child, and holding the arms of her little child in her hands, they too went through their incantations. They bowed and bowed again; they raised and lowered their arms in clockwork regulation till I wondered that they grew not weary. Their expression was intense; they meant to win their aim. Then lighting their joss sticks, and finding a space for them nigh the head of the grave, they moved off to give place to others.

Here, too, are Sacred Monkeys. I knew not of it at first. Not one was in sight. Being Sacred, they are hugely spoiled. I wonder that the whole host of monkeys upon Singapore do not congregate around that shrine. But they do not. Perhaps the Monarch, whom I was soon to see, makes it too hot for intruders. He certainly is a big one and has a nasty temper. He makes it hot even for the particular subjects. He was slow coming, but once arrived, he made things lively.

I was told that if I made an offering for the well-being of the Shrine, I could see those monkeys. Naturally I shelled out. Then the special custodians of the grave gave forth weird calls. They called

and called, yet nothing stirred. They threw ripe, luscious bananas upon the cleared space at the head of the Shrine, and called anew. Then I perceived a stirring in the trees nearby. Down from the tops I could see monkeys swinging from limb to limb. They came down from every quarter, and soon the quad was alive with the little beasts. They were not well-mannered; they were distinctly selfish. There were mothers carrying their babes in their pouch, the tiny little head with its bright beady eyes appearing, and seemingly in grave danger of falling out as the mother made her peculiar running motion. But the Bachelors — or Husbands, I know not which — had no thought for them. It was a wild scramble, far from Holy. Then suddenly the Monarch came upon the scene. That straightened things at once. He is four times the size of any other. Though late in time, he was going to have his share, and he had it. Then, as suddenly, they scattered. There was a wild rush for the trees. Up, up they swung themselves. They were gone.

---

Thence to the Steamer, and I sailed for Home, my South Seas' Roaming over.

## PART XII

# MEMOIRS OF ST PAUL'S ANGLICAN CHURCH, ESQUIMALT, AND THE EPISCOPAL CHURCH OF ST MARY THE VIRGIN, SAN FRANCISCO, 1887–1897

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

## PREFACE <sup>1</sup>

In the early part of this year, 1949, our present Rector, The Reverend Keppel W. Hill, read some interesting writings from the pen of The Reverend William. W. Bolton, Rector of the Episcopal Church of St. Mary The Virgin, 1889–1897, dealing with the early life of this Church.

This quaint and beautifully written history created so much interest and enthusiasm throughout the congregation that urgent appeals went out to have these writings typed. So in response to numerous requests, our Evening Auxiliary has prepared this brochure for your reading pleasure and historic interest.

The writings have been carefully preserved these many years by Reverend Bolton's daughter, Mrs. V. Grant, who resides in San Leandro, California, and who has graciously given her consent for us to have them reproduced.

First Edition	June	1949
Second Edition	November	1953
Third Edition	February	1958

---

<sup>1</sup> The Preface is the first page of the *Memoirs*, which were kindly provided by [The Episcopal Church of St. Mary The Virgin](#), 2325 Union Street, San Francisco, California, United States.

<b>Playing the Sleuth.....</b>	<b>12</b>
<b>A Brush With Ruffians .....</b>	<b>15</b>

## BEGINNINGS

It was a carriage factory in a small way.<sup>2</sup> The Pacific's waters lapped lazily within the shelter of the harbour, not an arrow shot away. Above the factory was the loft for storage, reached by an outside flight of steps. The owner was one of the Old Timers of the place, good hearted, a keen sportsman, with whom the Cleric oft tramped the mountains after game. It stood in a steadily increasing section of the community, hard by the City on the one hand, and the Cleric's parish on the other. That parish, which as a fact embraced it, extended a full thirty miles down the coast,<sup>3</sup> and back to undefined limits in the hills behind. Churches were not over numerous, and the way to worship seemed to many of that community to be over long. A movement therefore arose to start a Mission Centre in that fast developing section. It boasted neither Hall, nor School; the houses were small, befitting a young and thrifty people. Upon the factory loft the Cleric set his fancy. His fellow sportsman met the proposal with a friendly Yes. That was the beginning.

A faithful few got busy with the broom. The railway magnate gave seats that should have been in his trains; another friend gave a Japanese screen for the robing room, which, there being no space near the entrance door, a serviceable double one had to be placed in front of all, and because of the length of the Cleric, did but half duty at its best; an harmonium was loaned and an Altar raised, adorned with Cross and flowers. There could be but one service held at Eventide and on Sundays, for the Cleric had calls elsewhere, and it was nip and tuck to return in time from the country Church 15 miles away. All things prepared, the doors were opened and the folk foregathered. It was a success from the very start. The loft was filled to overflowing; the enthusiasm was catching. The City was not to be denied its quota. The singing made the old rafters ring; the offerings surpassed those of many a City Church. Up those rickety stairs climbed the old and the young, the rich and the poor. It was the House of God for all who would. That was the Following On.

The factory, and the loft, is gone; the congregation outgrew it; and a modern dwelling house now rises on the site. Within a stone's throw there stands today a Parish Church, with its settled Ministry and a large and thriving community around. But the carriage loft is a Memory highly cherished, and though few now survive who took part in those stirring services in the Long Ago, yet the Tradition is passed on of how from such humble Beginning yet another House of Prayer rose in the Far West. Such was the Aftermath.

A Beginning of quite another kind now came the Cleric's<sup>4</sup> way, opening to him a vista undreamed of, and in time had its Aftermath in changing the current of his life. An Oxford graduate, with his Boarding School for boys, came to settle in his Cure.<sup>5</sup> So well read and refined a companion was very welcome. But sickness struck down one of his pupils, a sickness unto death, and that loss seemed to break the Master's heart. He could not carry on, gave up the work, went to the Upper Country and soon after Passed Away. The parents, bankers and merchants, the Bishop too, sought to find someone to fill the vacancy. Their unanimous choice fell all unknown, unthought of, upon the Cleric. He protested. School mastering was not for him. He had had no training in that difficult art — for all that

---

<sup>2</sup> In this paragraph and the next, WWB describes the founding of St Paul's Anglican Church in Esquimalt, near Victoria, British Columbia, Canada. St Paul's was built and consecrated in 1866, when WWB was still a child, so the Cleric referred to in these two paragraphs is not WWB. St Paul's has since become [St Peter & St Paul's Anglican Parish](#), 1379 Esquimalt Road, Victoria. For information regarding the history of St Paul's, see [here](#) and [here](#).

<sup>3</sup> To the Metchosin and Sooke areas.

<sup>4</sup> The Cleric referred to is now WWB, who was Rector of St Paul's from 1887 to 1889.

<sup>5</sup> *Cure*: the office or district of a curate.

most think it so easy. But they would take no refusal. Therefore, he agreed that until a better qualified man should be obtained, he would become a Teacher.<sup>6</sup> That was the Beginning.

Teachers are born, not made, despite the Normal Schools of today, which pour forth Pedagogues trained to drive in knowledge, but few Teachers inspire and win their pupils to eagerly receive it. In is an Instinct; nor books nor men can create it. If it is there, all is easy; if it be absent, the Profession is a toil and the work drags. Teaching is also a Profession in itself, a whole time job; it cannot successfully be tacked on to others. It demands the whole time and attention, for it reaches beyond the Class Room into Playing time. As for the Cleric, not he but others had led him into this new path. He could not, with justice to scholars and pupils, divide himself into Master and Priest. He did not attempt it. The Call had come, and for the time being he laid aside his ministerial work. What it all meant he knew not, but the Present, not the Future, was the Thing.

He found Teaching a real Pleasure. He was rusty, very, but it was now up to him to brighten up every cog and wheel of that Teaching Machine within him, a gift wholly unknown to him before. And yet the Pulpit had all along been a training ground, for he had never been a Preacher of mere homilies and exhortations, but from the very first had conceived the pulpit rather to be a platform from which ceaselessly to Teach his various congregations the Faith as handed down the Ages.

In time the Better Qualified came upon the scene — though as a fact he proved an utter failure — and the Cleric looked again to his old Profession. They around him wanted him to remain, but he had had his vision broadened by the new experience. He wanted bigger space for action, a fresh field with wider contact, so not knowing what might befall him, he went south to the Americans — the land of his forebears<sup>7</sup> — landing amid strangers in San Francisco. Eight years he passed there, and then with its Story and Happenings added to his Collection, he returned with children of his own, for him to teach and train under the one and only Flag for him, which must needs be theirs. Others quickly gathered round his own, for he had not been forgotten.<sup>8</sup> The work enlarged, then partners came and a great School<sup>9</sup> arose with fine buildings and ample playing fields — for Sport was still an essential part of Life with him — his boys must be “hard as nails” even as he when he first stepped into Life’s arena. Teaching was now permanently his Profession, nor did he ever regret it. It covered the major portion of his life.

Such was the Aftermath.

---

<sup>6</sup> WWB was Headmaster of St Paul’s School from 1889 to 1890.

<sup>7</sup> WWB’s ancestor, Robert Bolton, moved from England to Philadelphia in 1718. See *Genealogy* in Part I, *Notes on the Life of WWB*.

<sup>8</sup> See *Mr Bolton’s School, 1898–1906*, in Part I, *Notes on the Life of WWB*.

<sup>9</sup> See *University School* in Part I, *Notes on the Life of WWB*.

## COW HOLLOW

Few, if any, of San Francisco could locate it today. It has disappeared, its memory effaced; yet at one time it had no other designation. To the great American city built upon seven hills, touched at their base by the Western Sea, with its 100 square miles of harbour, entered by the Golden Gate, came the Cleric, a perfect stranger. He had a mission there or his steps had not been guided thither, but what it was he knew not. Actually, its Bishop <sup>10</sup> told him, when he went to pay respects, that he was not wanted, that he was of those who firmly held “America for Americans,” yet would he not refuse him license, though he would not aid him. It was no hopeful outlook for a few weeks, then an offer came to temporarily assist at a prominent City Church. <sup>11</sup> He took it, and when the last day came, was begged to remain as part of the establishment. That parish was half rich, half poor. Its Church was raised amongst the former; attempt had been made from time to time to serve the latter, by ministrations through temporary centres in their midst, but they had failed. Every other Christian body had likewise tried with similar result. It seemed to all a hopeless proposition.

A year passed and then the offer came from the man whose colleague he had been, and upon whom the responsibility of that unapproachable part lay heavily, to hand it over to the Cleric, and the parent Church would guarantee support in all ways till things were self-supporting — if ever they should reach such stage. The offer was accepted and the work begun. But first he sought again the Bishop; this time he gave his Blessing to man and enterprise: “I was wrong; you were wanted. God prosper you, my son.” It was now up to him to “make good.” The district was then known by one name only: “Cow Hollow.” Not that any cows were ever seen there, nor seemed there ever to have been chance of pasture in that sandy waste. The hills ran down to the harbour, and from their base to the water lay an irregular piece of land, largely waste, but here and there saloons, corner stores, and workmen’s homes. Through it from end to end ran a tramway line (of cable kind), which led to the Military Reservation at its further end, and The Golden Gate. Even then they were busy reclaiming land from the sea, and acres were added every year on which more homes arose. At the foot of one of the hills was an oasis in this desert of sand and poor class buildings. One whole block of land had been turned into a bower of trees, and in their midst was a lovely bungalow. That was a City Editor’s home. He had much property elsewhere. High up among his fellow rich, he might have built a palace — for his wealth was great — or in the country hard by amid fields and park land, but it would seem that very perversity had settled this spot for him. And all around, other blocks of land were his. He was the uncrowned King of Cow Hollow; his name — Frank Pixley; his sheet — The Argonaut, known from West to East, the continent over. <sup>12</sup>

Search found a vacant Grocery Store; a notice was attached that Worship would be held therein. The Cleric, with a little band of faithful henchmen, devoted women too, opened up his spiritual goods and steadily drew customers. It was curiosity perhaps, at first, but those who came to see and hear returned to pray. The numbers grew till the Grocery Store could no longer hold them. Then search was made for other home.

Politics are taken seriously by the American people. Every City, every hamlet, must have its Halls wherein each Party holds meetings the whole year round. The war on the others never ceases. Not only are there the Elections of the Nation, but those far more bitter contests for the Wards and petty offices. One such Hall stood right upon the car line of Cow Hollow — a Republican Wigwam —

---

<sup>10</sup> [William Ingraham Kip \(1811–1893\)](#)

<sup>12</sup> [Frank Morrison Pixley \(1825–1895\)](#)

used of weekdays; on Sundays it lay idle. Why, thought the Cleric, should it not be his those vacant days. He found that it was the personal property of a high City Official, given to his Party for their free use as a Centre. Strange, but that man's wife had long been his friend, her beautiful home on the hills above always open to him. To mention the matter to this sofa-ridden woman was to gain her to his side. He met the high official, her husband, for the first time now; no boisterous politician, but a kindly, gentle man, who promptly gave consent. The Altar was removed, set up, the doors thrown open, and the Hall that had so long rung only with the cheers of partisans, now resounded with Hymns to the Great Father of all. Soon it, too, was filled to overflowing. But a certain faction of the Party were strong in protest. They had no use for Religion in any form. They made angry appeal to the Owner to put stop to such use of their Home. They struck the wrong man. He gave them notice, there and then, that from that day it was the Cleric's, not only for his and his people's use on Sundays, but every day of the week. They had ejected themselves and must seek other shelter for their conclaves.

Soon, however, it was seen that only a permanent Church would answer the developing situation. But where the site? That question and its solution brought about the next stage: The Taming of an Editor.

## THE TAMING OF AN EDITOR

He was short of stature, thick set, big-nosed with snappy eyes, bewhiskered save his chin, had a national reputation by reason of his caustic pen, a forceful, masterful, pugnacious man, had fought his duels in the Long Ago, had travelled much, was rich beyond the dreams of avarice, his lovely Home full of Art treasures gathered from many lands, a well-meaning but somewhat shrewish wife,<sup>13</sup> no children, but possessed a giant of a dog, his constant companion save in the great City where his Sanctum was. His pet and particular aversion were the Clergy; the very sight of one set his teeth on edge; he was all for fight. His tongue, ever an unruly member, he could swear with as could few men, and pour out abuse as quickly from his lips as from his facile pen. Professed a rooted objection to all Religion, said that he had had enough in his youth, had been brought up on it, met it at every meal, at every angle of his early life, threw the whole thing over once he had left the parental roof, and was an Agnostic with a touch of Atheism. Not at all a lovable man, one who was feared, growing old, had need of stick, acerbity increasing with his years. It was with him the Cleric clashed. It came about in this way.

For a permanent Church, he settled in his mind on a corner lot at the back of the Editor's home. No move had that agnostic made those months past, but his antagonistic attitude was known by all. If raised on that site, it would be to challenge him day in, day out, with the Power of that Cross which he desecrated. But as if that was not enough, the plotter found that the lot and those beyond were the property of that same Editor. Here, then, was evidently the necessity of bearding the lion in his den. Men held their hands up in horror. But it had to be done.

To the office of "The Argonaut" the Cleric went, and sought interview with the great man from those busy at the counter. "He's in there," said a young man pointing to an open door, and grinned all over; one behind him laughed aloud, then all the Staff joined in, and the young man whispered as the Cleric moved towards the door, "Look out!" He knocked, though the door was opened, stepped in and stood at the desk where the little man was scribbling hard, nor had time even to look up at knock or entry. A full minute passed, all seemed oppressively quiet; outside the traffic moved in endless line; inside the Office, men seemed to be holding their breath as if for some explosion. It came. He looked up, caught sight of the Cleric, dropped his pen in amazement — and the fireworks began. There were rockets, Catherine wheels, Roman fire and bombs all in one. "Who the \_\_\_\_\_ are you? Don't you know I hate your whole \_\_\_\_\_ tribe? You're after something, like your \_\_\_\_\_ tribe always are. If I had my way I'd round every \_\_\_\_\_ son of a gun of you up, ship you to sea in a leaky boat and send you to \_\_\_\_\_ where you belong!" His teeth snapped beneath his grizzled moustache, his eyes flashed fire of hate, he banged his hand upon the desk as he added yet more of the same eloquent and gracious kind, and at last flung out (Oh welcome rest about to be, but still more welcome Word), "I don't know who you are, never seen your face before, but by your \_\_\_\_\_ cheek coming here and your \_\_\_\_\_ cool nerve, you must surely be an Englishman." He stopped. He had fairly exhausted himself.

Now 'twas the Cleric's turn. He had stood immovable looking down on the little Fury. He spoke in gentlest tone. "Sir, you have said aright; I am an Englishman, yet there is no need of cool nerve coming here. You own property near your pretty home. The poor around you need a House of God. You may smile at that need, but we cannot all be made to think alike. Will you give them that corner lot behind your house? It's the very spot. Forget me; think of your own American People. Men told me that you would never do so, that I was mad to come here; I refused and still refuse to believe it. Will you do this thing for them?" He sat there aghast; what with the Cleric himself and this astonishing

---

<sup>13</sup> Amelia Van Reynegom

request, he, for once, couldn't find a tongue. "Hell," said he at last, "That caps the climax. I hate your \_\_\_\_ religion and all religions, and you ask for land to spread it. I'd tell you to get \_\_\_\_ quick out of here, but anyone can see that you wouldn't till you get an answer. So, you're the fellow I've heard of in my neighborhood. I've wanted to have a look at you for some time. My wife has heard you in that \_\_\_\_ snob's Church she goes to. I'll give nobody my land; you're too \_\_\_\_ poor to pay for it, but I like your pluck in tackling that Hell's job in Cow Hollow, and, \_\_\_\_, I can't refuse you flat. I'll speak to my wife. Come back here today week and I'll let you know. Good day." So the Cleric left him; the office had heard all, and gave him a look as he passed out as much as to say, "We'd give you a cheer, if we dared!" For all the abuse, the Cleric liked the famous little Editor, so short of stature, yet so tall of foul language, and knew in his heart that he had got him. That next time they would meet as friends.

The week passed and he returned. The little man, as he entered, did not extend his hand, nor did the Cleric, but said, "Sit down. I've talked to my wife. I'll not give you the land outright, for you might sell it and decamp with the proceeds, though you don't look like the scamps some of your brethren are. But I'll lend you that land you want for Seven Years. It'll be safe enough yours. I'll have the proper papers drawn. At the end of Seven Years, we'll see. You may be dead; I may be; the thing may fizzle out — then the land comes back to me. Will that suit you? I won't do more." And he had not sworn once. The Cleric gently thanked him — it would answer all his purposes — and invited him to drop in at the Wigwam any Sunday to see for himself what was going on. "Well, well, perhaps I may. My wife likes it. What's the matter with you anyway? I hate all your brood as you know. It must be because you're an Englishman. I've always had a soft spot for your Nation. Go ahead and do what you like with that land. It's yours. Good day." The Cleric rose, put out his hand; the Editor (for all his rough exterior had good blood in him) rose too and took his hand. They looked straight at one another and the Cleric said, "We are friends, Mr. Pixley, are we not? Not enemies?" "Yes," he said, "we are friends." And so they parted.

Seven Years. It seemed a long vista ahead. Seven Years. Much could be done in that time. How little possible either of those two thought, that day, the end should be as it was. Seven Years to the day, and that famous Editor lay dying in his lovely home, doctors and nurses in attendance, but the Cleric holding the dying man in his arms as he slowly breathed out his life, the two closer friends than ever by a common devotion to that God in Heaven so long and so deliberately flaunted. Follow now his return to the Fold.

## THE FRIENDSHIP OF AN EDITOR

The Wigwam was indeed transformed. No politics were breathed now within its walls, save those high Policies of Eternal Worth of a greater Empire than man's mind can grasp. Its walls adorned with scrolls and banners; its platform the Sanctuary, with its Altar brilliant with flowers and many lights; the Celebrant in gorgeous vestments, meet <sup>14</sup> to attend at so high a Court; the servers and the acolytes, children of Cow Hollow, black as well as white; music by all — for of formal choir, there was none; incense rising even as were the prayers of that earnest throng; a congregation of one heart and of one mind.

The Great Lady of the district came regularly, for her heart was right with God, nor did she ever patronize, for all her wealth, her shrewishness and position in Cow Hollow. She never failed the Cleric from first to last. But the Editor, her husband? The weeks passed, but he held aloof. Then one day he came. It must have been with deliberate intention to scoff, for he knew better. He would show what he thought of reverence for things Unseen. He stepped to the front row of chairs, kept his hat on, brought his giant dog in with him, leaned forward the whole service on his stout cane and ivory-handled stick, those eyes of his taking in every detail, chewed plug — alas, spittoons have no place even in temporary churches — and rose from his seat at no time. There being no pulpit, the Cleric was close to his people when addressing them, and he could have touched the Editor as he spoke of things divine. Again the next week, he came; the next and yet again, he was there. Now he removed his hat; now he left mighty "Caesar" outside; now he chewed not; now he bent his head as the Host was lifted; now he spoke a friendly word to the Wardens as he passed out. But the Cleric kept aloof. They were friends, but he must fight his first battles alone.

Down the road, alongside the cable line, behind the Editor's home, the little Sanctuary was rising. The Shell was there and the workmen were inside. One afternoon, as the Cleric was directing, the Editor came upon the scene. Said he, "You see, I kept my word. I have been there. Why was not Religion and Worship made as pleasant and as beautiful as you make it when I was young? I have been thinking of all you say to us. Let us thrash it out together. Come and see me." The Cleric met him in his lovely home, and, as man to man, they talked. Another day they met in the cable car on their way down the Hollow from the City. Said he, "Where do you live?" Being told, "In the City," he replied, "Why not live amongst us?" "There is no house available that I can see." "Bosh! You know that house on the lot next to your Church? It is mine. Go and live in it. You are to pay nothing. I'll tell my agent." Thus came a rectory down from Heaven.

When the little Church was opened and looked all glorious within, made so by gifts from many hands, they met again in the car on their way home. Said he, "I see you like pictures in Churches (the Fourteen Stations hung there). I'll give you one if you care to have it. Brought it from Madrid. A copy of Murillo. Cost a pile of money. It's the Virgin and Child. Your Church is dedicated to Saint Mary the Virgin, so it'll suit." The Cleric had seen it often as he went in and out of that home. It was an Altarpiece and filled, from floor to ceiling, a large alcove in the Hall. He was dumbfounded, but answered gently, not excitedly, "Thank-you, Mr. Pixley." "Come along now and see it." So the two entered the Hall. They stood admiring it when the wife appeared, just as he was saying, "Take it away in the morning." "Take what?" she said. "This picture," said he. "No, no! You can give him anything else, but not that." He snapped at her and high words passed. Then she said, "The Church can have it, but you will have to put in a stained rose glass window in its place." So it was agreed. The next morning, the Cleric and his men appeared and took it down, the good woman not sadly looking on,

---

<sup>14</sup> *Meet*: fitting; proper.

but saying, "I'm really glad now. I was very selfish. It will help make our Sanctuary all the more beautiful." And the rose window took its place. It must have been very costly, a lovely piece of work and craft.

The Editor was an ardent Cremationist; so ever was the Cleric. Here was a further bond. They fought for it together, the one from the Editor's Chair, the other from the pulpit. They were fiercely attacked, but neither feared a battle. To the Cleric looked all those who thought as he did, and he was constantly in request for the last rites in the City's Crematorium by those wholly strangers to him. And when that Editor's Soul had Passed On, it was he who took the Office and watched (not as the Flame, as is so ignorantly thought, but) as the rosy heat touched and embraced the body of his friend as it passed into the Chamber on its Cradle and was dissolved in a twinkling. But all the years before they had fought side by side. There were those of other Communions — even some of his own — who were unfriendly to the little Sanctuary and attacked it with venom. And when it became public knowledge of the well-known Editor's friendship with the Cleric, the bitterness increased. "The man who converted Pixley" became a gibe both on tongue and in print. Then that famous caustic pen got busy and he flung challenge and defense in their faces, as only he could do. Men wondered at this change, that his columns, which for years had heaped abuse upon "The Cloth," should now be used in stout defense thereof. Yet he was ever shy of "the brood" as a whole. He was too old to eradicate all of a lifelong prejudice, yet often told the one that he "would try hard to see the best side of them."

But now he had to lay aside that pen, which had been so mighty, which, from Pacific to Atlantic and in other Countries than his own, had become famous and week by week was awaited with keenest interest. He could no longer hold it, and when that day came, he left his Sanctum for good; he could not dictate to Amanuensis,<sup>15</sup> he said — it killed all thought in him. So his beautiful home saw him the more, his garden and the Sanctuary, too, which was never closed of daytime; he grew old very fast, his steps feeble, his big stick very helpful (that stick left to the Cleric as a keepsake and ever highly prized), his great Caesar growing old with him, his wife (herself ailing) very mindful of his comfort.

Then came The End, but she was not to see it. She lay, herself nigh death, in one sumptuous bedchamber, he in another, and it was the Cleric who, when the Spirit of that forceful writer had passed Beyond the Veil, stepped to her bedside and told her that she was Alone. When he had completed the final rites, he came again to her and she thanked him not alone for that day's duties, but for the influence that he had gained over her strong-minded mate. "He was very grateful," she said. "He was never the one to say 'Thank-you' easily, but he often told me that he could never hope to repay; his debt was far too great. You must not worry about the Land. He knew it was the end of the Seven Years. Here is his Will. He leaves the land and the house also to you personally. It is his Gift of Thanks to God. Had he been conscious yesterday, he would have told you so himself; he told me he wanted to and was looking forward to the pleasure. It was your gentle voice and manner that utterly disarmed him. You will pray for him, won't you, and be still my friend as you were his."

The Cleric won her assent to change a personal into a diocesan gift. With the Passing of that Soul, his work seemed to come to an end. Others thought otherwise, but how could they know what passed between the Cleric and his Guiding Light. The Light said, "Northward now" — so he went, and found his main Life's Work there awaiting him, but who shall say that that same Light was wronging him, in pointing South eight years before. Apart from all else, was it not worthwhile that he should journey

---

<sup>15</sup> [Amanuensis](#): a person employed to write or type what another dictates.

thither as a stranger and labour strenuously for full eight years to save one Soul for God, to lead one Soul out of darkness into Light?

He thought so, and he was glad.

## THE JEWELLED CHALICE

The little Sanctuary hard by The Golden Gate was one of the Cleric's most treasured memories. It summed up all his hopes and desires of Things Spiritual for his fellows. His hopes were to present to them the full Beauty of Holiness in its outward aspect; his desires were to get close to the hearts of his people, to know them not superficially and live a life of guesswork, but to be their Confidant, their Confessor, their intimate Spiritual Director. These ends he saw could only be obtained by a mutual enthusiasm and self-sacrifice, and into them, for his part, he put in all his strength. He was met on their part, as never before at all the Altars he had served, with an enthusiasm and a ready self-sacrifice that astounded him. From the earlier days of the Grocery Store, they developed steadily; the Wigwam exemplified them only the clearer, but the Climax was reached when the doors of the little Sanctuary were flung open for the Worship of The Most High and the uplifting of souls.

Into that Sanctuary poured the rich and the poor, the learned and the unlearned, those who had found out the richness of the Catholic Faith, and those who groped in the dark, yearning for Light. The colour line was never drawn; the darkie knelt side by side with the millionaire; the weekly School had its little pickaninnies; the acolytes, some white lads, others black as the ace of spades. The Cleric knew every soul intimately, was Father to them all. He had taught them the Faith so that they were a Unit, one great heart beating in perfect unison with his. He there reached the Zenith of his ministry and was content if there, at such a wondrous stage, it ended. He had dreamed of such a state of things and now beheld it. It did end there, and it was well, for after it, where e'er he roamed, all seemed half dead to him.

Who could enter those doors without feeling the impress of the Devotion that had taken its abiding place therein? The sweet smell of Incense lingered over, as if to invite to prayer; the Altar with its Crucifix, its gilded Candlesticks, its flowers; its Tabernacle for the Host Reserved, impelled to bow the knee. The Fourteen Stations were a constant appeal to Remembrance, so, too, the ever glowing Lamp of the Veiled Presence there. But when High Mass was sung, then was to feel the full impress of that Sanctuary of God. The adult Choir were no hirelings, but men and women who Believed; the organist had grasped the spirit and richness of The Faith, and played upon the keyboard as if he knew how to preach through music to the soul. The Cleric and he were never at fault, each interpreted his part as if he knew the passing feeling of the other. When there rang forth from the rich appealing voice of the Soloist (he an Army officer proud to serve), "Thee, we adore, O hidden Savior Thee," and every knee was bent, then 'twas to know what Worship really means and is. It was good to be there, and both knew it and rejoiced.

The requirements for rich and fullest Service were abundant, but they did not come to hand all at one time. Some were direct Gifts; others — such as the Vestments — were the work of women's hands for many months. One thing only now was lacking. From the beginning of things, the Cleric had used Sacred Vessels loaned to him by the Mother Church. They were of silver plate, plain and of no intrinsic value. While other essentials were also lacking, these would serve acceptably. But all other things being theirs, it became them to have their own Altar Vessels. He brought the matter before his people as a congregation and told them that it was in his heart to make this final offering the climax of all their gifts. He asked of them that they should do as a Leader of old time had asked of his whole nation: bring the following Sabbath their gold and silver, to be melted down, and jewels to adorn. There he left the matter. But not so those devoted ones. To them it was a call, a command, and there went word round that each should do their fullest part, that all should open their silver chests and jewel box, and the very poorest prepare to take part in the great Offering.

That Sabbath came and with it a gathering which pulsated with enthusiasm. The Cleric dwelt upon the privilege now about to be given them to place upon the Altar, which meant so much to them, Vessels of gold fit for use in the Supreme Act of Christian worship. Then came that Offering, surely such an Offertory as has been rarely seen. Rings and brooches, earrings and breast pins, watches and spoons, chains and necklaces poured upon the sidesmen's plates. The intensity of the situation grew. Men and women felt that they had not given enough; they held up those Collectors to pull off the rings that were upon their fingers, the jewelry that was upon their breasts. There was the sound of many coins, as men emptied their pockets upon those plates. There was not a sound in that Sanctuary save the clanking of metal or the drop of precious stones on hard surface; men breathed hard and women were moved to tears under the strain. Now were loaded dishes brought up and laid upon the Altar; a single voice rang out from the Choir, the Truth which was in the thoughts of all and ever accompanied the Oblation at such a time: "All things come of Thee O Lord, and only of Thine Own have we given Thee." Then the full Choir broke forth into Thanksgiving, the old song that never wearies, "Praise God from Whom all Blessings flow," to end in one prolonged Amen — Amen.

Has such a scene been often paralleled? The Cleric could recall but one approachment to it, not in Church, but in London's Albert Hall, when in a great cause, that of Missionary effort, men and women, he among them, were moved by great oratory to tear off their rings and jewels on the spot. But here 'twas in a Church in the Far West and not the sudden enthusiasm of the moment, but the studied effort of a little band of souls who had hunted out their treasures to lay them on that Altar they loved so well. Nor did it end that day. Some were absent, not of choice; some found other treasures later, for the Cleric all that week and more found on his part, as he passed in and out of the Sanctuary, little packages laid upon the Altar steps in which there were still more jewels: here was a single diamond, here a pearl, here a row of pearls, and here, even a ruby and an emerald. There was a great sufficiency; he was overwhelmed and had to say, "My people stay your hands; there is a plenitude."

When he carried it all to a noted firm of jewellers that it should be used for its set purpose, the old Head said as the contents of the bags were poured out before him, "Father, if I did not know you, I should touch this button which would bring the police, for here is such a haul of miscellaneous booty as burglars might well envy as a record. Make what you want? Surely so, and more, and pay for the craftsmanship as well. The thing is whether we can use all the jewels. The Vessels will be very wonderful, worth a small fortune, but will bring with them a great responsibility, and even danger to you in such a city as this is today."

So the Vessels were made, Chalice and Paten and Vessels of Oil for the Anointing of the Sick (for the Cleric was firm in carrying out the full "orders" of his sacred ministry). The Chalice with massive Hem and Shaft, the bowl with leaves as a fully opened tulip, pure gold, all dazzling with jewels. The Plate of pure gold, too, only sufficiently alloyed to give it strength, the other Vessels no whit less beautiful. Then came the day when they were set apart for their sacred use. What an hour of rejoicing! Now had this people completed their beloved Sanctuary. As the Cleric lifted the richly laced Veil and the jewelled Cup with the golden Paten upon it, it stood clearly out upon the Altar; the Sun in the heavens burst out and shot its rays full upon those Sacred Vessels; the jewels flashed and glinted; the hearts of all gave Praise to God Whose now they were; and the Cleric gave Thanks to God for such a people.

## PLAYING THE SLEUTH

The Cleric had met with some strange happenings in his career, but few stranger than to act the Sleuth, trace a woman across a continent, find her and restore her to her husband. It is said to be dangerous to a third party to act between man and wife. It may be so, but it largely depends on the circumstances of the case. Here the Cleric was entreated by the husband, knew the wife, took the job as being part of his Calling, accomplished it, and was, to the last, the friend of both.

She was a young Bride when first he met her, gifted, vivacious, married to a multi-millionaire. Her religious training far from neglected by her parents, it was through that that she and the Cleric were brought into contact, for attracted by the little Sanctuary in Cow Hollow, she had made it at once her spiritual Home and found in it everything to satisfy her. She was an active partner there, no drone, her purse ever open, her hands ever busy. Her girlhood years had been passed in the Mormon City of Salt Lake; she had come to the City at the Golden Gate upon her marriage. The world seemed fair to her and Life a round of Joy. Not that she was frivolous. She had Youth and Health, a lovely and palatial home, a large bank account and a wide awake mate. Hers, at first, was the pure Joy of Living.

Her husband was a man of business, absorbed therein, a politician too, had visions of Congress, Senatorship, even — as every live American may — of the White House, kept open house, spent his money freely, considered that he had won the best woman on earth, and soon largely forgot her in his daily whirl. Therein lay the mischief. A wife ignored is a wife wronged. To be treated as a pretty toy, to be exhibited at the Table as a Possession to be proud of, to be given horses and carriages, town and country residences, and yet to lose Companionship is to invite trouble — and it came.

She was, as time went on, utterly Lonely and mistook her husband's lack of attention as his loss of love for her. What was Wealth and a daily round of social duties compared with Comradeship. If she could not have that, then she had better go away and leave him Free. He would never miss her. One day she disappeared. She had gone, gone out into the great world she had only seen as a pampered, sheltered onlooker, gone to work out blindly her own destiny, come weal, come woe, gone to get away from her intolerable position of Loneliness in a Palace.

To the Cleric the husband came at once. Did he know aught? He had given her everything she wanted. This mad act would not only ruin her, it would ruin him politically, socially, perhaps, financially, for she had taken certain papers with her, her own indeed, but of immense importance in his many money schemes. It would be useless his seeking her, would only add to the scandal and doubtless she had turned against him, though why he failed to see, and would refuse to return with him. The Cleric drew his bow at a venture. Might it not be that she did love him and that she felt by some conduct of his that she was nothing to him and had best leave him free. It was a new light to the man. He said that he had not thought of that point of view. It might be, but it was wholly wrong for she was and had been the one and only woman in the world for him. But how to get her back? He might send out detectives, telegraph over the Continent, and would quickly trace her, but that would be cruel to both of them. The Cleric, he knew, had boundless influence over her and he had been glad that she had found such a Friend in him. If anyone could touch and win her, he could. Would he? His chequebook was the Cleric's to draw on without limit. He could hunt her to the ends of the earth, only bring her back to him.

He consented; he would find her whithersoever she had fled, but he would not bring her back if there was to be estrangement at the end. But if he found that love for him had not died, and he still — as he said — loved her, he would return with her. So turned he sleuth.

She had not fled by sea; the shipping offices at the Golden Gate soon proved that. The Railway offices could not say, for none knew her by sight. But that was the only route out, so the Cleric started to locate one woman in a Continent. He felt sure that she would head for her former home and parents in Salt Lake City. Thither he went and found that she had touched there, not stopped at the palace (her husband's property by inheritance direct from Brigham Young),<sup>16</sup> but met her folk, saying that important business sent her East. Discovering from them that she had old friends in Denver, he went there. Again on her track, he had to use diplomacy for these would evidently fain cover up her tracks, yet let fall "Chicago." Thither he went, sought out its best Hotels — for she being so unused to the wide world, would surely stay only at the leading ones — found she had changed to her maiden name on one of the registers, her writing unmistakable. "New York" was added to that name. Now he headed to that City of Millions and long sought in vain. He plagued the shipping offices, went day after day to the quays as the great Liners made ready to be off, hung round the lobbies of the best Hotels, but their registers a blank. That she was somewhere in that vast city, he felt sure, then suddenly remembered once meeting in her western home, a certain New York woman lawyer: the two at that dinner party seemed good friends. He took a chance, hunting up not the office — less his Quarry might be given a tip and a fresh start by collusion of the two — but the Flat.

That afternoon he rang the bell and was answered by a maid. Was she residing there with the Lawyer owner? "Yes, please step in; she is just out now, but said she would soon return." He took seat in a lovely room and read some handy literature till the latchkey went, a happy voice so well-known sang as the singer tripped down the passage way — told by the maid that a Visitor awaited her — stepped into the room, and as the tall figure of the Cleric rose from the seat, gave a little shriek and fainted dead away.

It was doubtless cruel of him, but what else could he have done. The maid and he carried her to a sofa. Soon she came to and eased her soul by a flood of tears. The maid withdrew. Not a word yet had either spoken. Her face was buried in the cushions. Then suddenly she rose to fling herself at his feet and cry, "How did you find me? Why have you come? To take me back? I cannot go. He ceased to love me and I would have him free. I wanted to tell you all, but I was afraid you would forbid. You're not angry with me, are you? You are so big and strong, and I'm only a weak girl. I'm frightened of you. Oh, don't say that I must go back. Be the dear Friend you have always been and help me in my trouble."

He quieted her as she knelt there, told her that it was Love, not Anger, that had brought him to her; that she was one of his dear flock and he would have sought the whole world over to find this wanderer from his fold; that it was "his" fault, not hers, since she loved him still; that all would be well for he bore the message to her that she was the only woman in the world for "him." That calmed her, though she had her doubts and they talked things over. As he rose to go, he said, "You will remain here with your friend till the morrow, promise me." She gave him her hand. "How could I treat you otherwise. I thought I had covered up my track, yet you followed me unerringly. I cannot hope to escape from you, nor do I want to from such a Friend."

There was a Council meeting the next noon, the Lawyer in the Chair and each side made its plea, but the young wife's case was weak for the reason that there was Love on both sides, though a Continent stood between, and the Verdict was: "Return." Then the wires got busy. Soon the two, the Wanderer and the Cleric, set out face homewards, over the same track that they had each raced Eastward, nor halted on the way. Her sorrow had turned to into Joy: she believed what the Cleric and the wires had told her that she was the one and only woman in the world to "him."

---

<sup>16</sup> [Brigham Young \(1801–1877\)](#)

At last the waters of the Pacific, the Ferry, the carriage and pair waiting, the drive, the footman at the door, the lovely drawing room all banked with flowers, at the far end stood her man. The Cleric took her jewelled hand, led her to him as he stepped quickly forward, put her hand in his — and left those two Alone.<sup>17</sup>

## A BRUSH WITH RUFFIANS

The old Jeweller was right : “Those Sacred Vessels will bring with them a danger in such a City as this.” That City is the last resort of the criminals of a Continent. Driven from the East, they are hunted out ever further West till in San Francisco they are brought up by the Ocean. They can go no further and they cannot go back. The Cleric had his warning, and though he feared naught, yet had secret vault constructed for those gold and jewelled vessels. He used them only on Sundays, not at the daily Mass. He was never unattended at his Offices. It had always been the rule for his Servers to take their regular turns, whilst several were always present on High Days, and it helped greatly when danger came at last. His residence adjoined the Church; it was but a step from his side door to his Vestry, which was behind the Altar. The front doors of the little Sanctuary led out to two roads which crossed at the spot.

A morning came when, as he stepped out to his Vestry, he chanced to see a man leaning against the wall opposite to the Church's front and another doing the same thing higher up. He thought no more of it than that it was a very early hour for lounging, and said his Office, his man Server in attendance. The Morrow came and again he noticed the two men. When yet another came and two men again there, he began to have suspicion. Then came Sunday. Those men were there as usual. He left the jewelled Chalice in its vault and used the old and plain one. The men entered with the Congregation at that early hour. They were seated at the end of the Church and the Cleric could but conclude that they were in for mischief. Several men were as usual about him and also many in the pews. He of set purpose unveiled the Sacred Vessels at once and placed them — contrary to all usage — at one side, in view of all. When later he turned towards the congregation, the two were gone. Now he knew of a certainty what they were after. They had hoped to see those Jewelled Vessels, and not seeing them, departed. They may indeed have each day looked in at doors or window — then unglazed — and not seeing them in use, with men always about, have put off their proposal for a raid to the High Day when surely they would be seen. The Cleric had said nothing to anyone about the matter. Why should he? Those two men now knew that he was never alone and that he did not use, seemingly, that which they were after. But that they would dare at High Mass in the midst of a crowded congregation never entered his head as a possibility. He was to be enlightened.

The folk came pouring in; those Golden Vessels were upon the Altar hidden by their veil of lace and colored silk; the Choir were in their places nigh the organ at the back, nigh those doors, when the Cleric, with his long line of Acolytes and torch bearers, servers and the Master of Ceremonies, swept in from the Vestry behind the Altar; and to his amazement his eyes fell upon those same two men seated in the front pews, one on either side of the one central aisle. Now that he had a close up view, they had the mark of ruffians clear upon them and in rough fustian clothes they seemed as much out of place in that congregation as a beggar in rags would be at a King's Levée.<sup>18</sup> He could not blame his sidesmen for they knew his orders: All Welcome. There was a leer upon their faces, which spoke clearly, “We've got you now, all right.” But had they? He smiled as he thought, What fools! They had already missed their opportunity. If only they had known that those Golden Vessels were there upon the Altar, utterly unprotected as they had sat there, a Veil and colored silk alone covering them from actual sight. Clearly they were strangers to Catholic customs. Not in the hands of priest at such a time, save at the carrying out, but otherwise at Low Mass. Yet now he had it. They counted on his carrying them both in and out, and would grab them from his hands as he passed close by. He was empty handed then; bad luck! They would wait and get him at the close. He felt sure that they would

---

<sup>18</sup> The [levée](#) has traditionally been a daily moment of intimacy and accessibility to a monarch or leader.

not dare to rush him at the Altar itself, for there were far too many men inside the rail. The battle of wits was joined.

The Cleric happened to have a warm friend in a detective — high up in the Service — with whom he had oft explored the hidden ways of Chinatown and whose residence was but a hundred yards away on the main street, but he knew that Sunday routine would not bring him home till close on noon, so kept the danger to himself and filled his part, even to addressing his people from his usual place, a Chancel step to which those ruffians were so close that he could have touched them. Now came the collection of alms by his men and a dread seized him that they might change their minds and take a chance with fewer men around him. But no! and with one eye upon them as the collection proceeded with the usual accompaniment of music, he called his Master of Ceremonies to his side: "Don't ask questions, but do what I say. Leave the Altar; get to the detective's house as fast as you can; tell him to come at once and look through the windows at the first pew in front on either side. If he can help, I know he will, but he must get police and stand by front and Vestry door. Go, but come back quickly. I shall need every man." He left and the Service went on to nearly its conclusion. The Master of Ceremonies returned, but the Cleric did not know of his re-entry till he heard voice behind him. "He's here; I left him outside. He says he cannot help you inside as they are desperate men and will shoot at first sight of him. He saw them through the windows and knows them. He will have men at the doors in a moment. Can I do anything more?" "Yes! In another minute," was the answer.

The worship ended when the Cleric lengthened the Office by giving out a Hymn, a long one at that. This was an innovation accepted with evident surprise as he looked down the Church and his eyes rested for a moment on the two in front. Soon as the music started and he could not be heard, he said, "Quick! Gather every Acolyte and man inside the Altar rails so as to block the view. Come to my side; I'll slip the Vessels into your hands. Pass round the Altar and through the curtain at the side; take them to the Vestry and stand by them till I come; the Vault is locked." Before another verse was finished, the Golden Vessels were safe, but those within the rail kept rank on rank about the Altar. That Hymn seemed the longest ever heard. But it ended; the organ broke into a Voluntary; the Congregation rose; the Cleric turned; his men fell each into his appointed place and two by two filed out, he the last, with nothing in his hands and the Altar bare. The Congregation turned to go likewise, but not those two; they stood there non-plussed, and as he passed — his trained hands ready for emergency — he smiled directly at them and murmured, "Got me, have you?" Then he suddenly wheeled round and slowly backed in case of even yet a rush and a shot in wanton rage. If those Acolytes were mystified by the orders given within the Chancel, they were astounded to see their Father enter the Vestry backwards, throw off in desperate hurry his heavy vestment of silk and hasten back to the Church itself. He would see if the men were coming his way or were going down the aisle. They were pushing roughly through the people towards the doors. He knew what they did not, that they were trapped. There was danger yet. If they should see the police ahead, they would surely bolt back and attempt escape at the Vestry end. But no! For the police were not outside the door, but had already hidden themselves behind the Altar curtains even from view of the Cleric and stepped out. By now the ruffians were close to the front doors; he lost them for a moment, then suddenly a woman screamed, loud voices rose and the folk surged backwards. He and the police made for that door, rude as the ruffians with the frightened crowd, to see blue-coated men with the two in their grip. They had jumped the men before they had a chance to draw. Even as he saw the group, the police were relieving them of their guns. It was a close call for all. The Cleric thanked his friend. When they appeared in Court the next day, they owned that it was the Jewelled Chalice they were after, that they proposed to grab it from the Cleric's hands as he passed, and, if need be, fight their way out with their guns. They "served time" instead.

Many counselled against a further raid, but so long as the Cleric served that Altar, he never failed to use those glorious Vessels. Today they are but Relics of a wondrous Past, stored in a Safety Vault

within the City, to be gazed at by curious eyes and the Story told, both of their unique creation and the high tragedy which they brought.

## PART XIII

### ROAMINGS IN THE GREAT SOUTH SEA

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

#### PREFACE

The original text of *Roamings In the Great South Sea the Pacific Waters* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as Volume 5 (Call no. A3361) of the Bolton Papers (Collection 1–7A).

Several of the contents of this volume also appear elsewhere and so have not been transcribed here. These include: *The Taupou's Grave*, *The Exile's Return*, *A Samoan Play*, *Discovery and Discoverers of French Oceania*, *British Consuls on Tahiti*, *The Tablet at Papetoai*, *A Martinet and His Nemesis*, *The Bo'sun-Mate's Story*, and *The Spanish Marine's Story*.

Extracts from *Polynesian Reminiscences* by W.T. Pritchard <sup>1</sup> have not been included. See *The Pritchard Affair* in the *Addenda* to Part IX, *Old Time Tahiti*.

Extracts from the *Transactions* of the London Missionary Society have not been included.

A chapter on *Queen Pomare's Diary* starts as follows:

Such as it is, this is the only known diary kept by the Queen.

It is but a fragment of events during eventful years for her. Starting in 1843, there is nothing of what led up to the crisis in her affairs; no mention of the primary cause — the arrival of Fathers Laval and Caret — nor of Du Petit Thouars' arrivals and demands, nothing of Bruat and the installation of the Protectorate, nothing of her years in exile on Raiatea. It ends as it begins — abruptly — with an entry of her return to her kingdom.

The text above appears on page 128 of WWB's notebook, whereas the next page in numbered 135; six pages have apparently been removed. WWB noted at the bottom of the text above, "*The Translation appears in another Journal.*" However, that 'Journal' is not included in the Bolton Papers at the Mitchell Library.

See also *Queen Pomare's Diary* in the March 1943 edition of the *Pacific Islands Monthly* in Part VII, in which we read: "After Mr. Bolton wrote, the diary was carefully translated, with a view to publication. But Mr. Bolton, after consideration, evidently decided that the diary's contents were of a too revealing or intimate character. The translation was stopped, and publication will not be proceeded with."

---

<sup>1</sup> The book can be found online [here](#).

The sections on the Gambier Islands and the Tuamotu Islands represents primarily WWB's travels in French Polynesia, following his arrival on Tahiti in 1928. The title of Volume 5 of the Bolton Papers, which is *Roamings In the Great South Sea, 1926*, is therefore incorrect. In *The Tuamotus I*, WWB refers to the wreck of his ship, the *Bretagne*, "not long after" he wrote about the voyage to those islands in his notebook; the vessel sank on 5 October 1929, which suggests that WWB travelled in the Tuamotus in about early 1929.

In *British Consuls at Tahiti Since 1825*, WWB states that the information was received from the Foreign Office in London on 1 January 1938. *A Pacific Cruise in 1838* was extracted from The Times of February 1938. This information suggests that most of the volume was written by about 1938, at about the same time that he completed Part IX, *Old Time Tahiti*, or soon thereafter. However, in *Pitcairn's Island*, Section III, WWB notes that "*Aunt Selina*" died March 1943, aged 87. This suggests that Part XIII was finalised no earlier than 1943, only three years prior to WWB's death in 1946.

Shorter versions of the some of the stories in *South Sea Curios* can be found in Part IV, *Tales of a Roaming Grandfather*.

In *Pitcairn's Island*, WWB gives some of the history of Pitcairn, but he never visited that island.

These volumes are available on microfilm (CY Reel 4992). The text was transcribed from scans taken from the microfilm and provided in a PDF file.

Note. <sup>2</sup>

Geographically there is no such named space on Earth’s surface as the “South Seas” (plural). The Pacific Ocean — except on its far western coast line — is One, Undivided Whole, north and south of the Equator. Polynesia, which these Roamings concern, lies in “The Great South Sea” (singular). This term was first used by the early Spanish navigators and later by whalers as a general one for their hunting grounds. The use of the plural is a careless though poetic indifference to Fact.

---

<sup>2</sup> This text is to be found after the Table of Contents in WWB’s notebook containing this volume.

## THE GAMBIE ISLANDS

## I

They lie southeast of Tahiti from whose port of Papeete we sailed, a long stretch of sea nigh 900 miles between the two groups, without a sight of land if the course be set direct. There was engine power as well as sails on the craft and the going was good. To the East, all along the way, the long drawn out Pearl islands — those “Atolls of the Sun”, known officially as the Tuamotus — lay leagues distant, havens of a sort should need have arisen, but all went well aboard.

At last, the Gambiers hove in sight. As we drew nearer, the land opened out. There was Tara-vai to the right and Manga-reva,<sup>3</sup> the “Floating Mountain”, to the left, the latter with twin peaks 1200 ft high, M<sup>t</sup> Mokoto and M<sup>t</sup> Duff, both the islands with their hog’s back much broken and covered with long grass of a drab colour; few trees, these nestling in the shoulders of the hills. The Barrier Reef having been passed miles out to sea, we headed between the two islands and dropped anchor beneath M<sup>t</sup> Mokoto to await the pilot. We were about to enter an immense extinct volcano, 15 miles across, its outer rim defined by the remnants of its sides, today ten islands, four of which are inhabitable: Mangareva, Taravai, Akamaru and Aūkena. There are reefs within reefs inside that huge crater, making navigation difficult for they lie at all angles. Mokoto and Duff have half their face gone — there is a perpendicular drop from their summits — looking as if cut with a knife. The valleys on the inner side of these islands are short and narrow, those on the outer broaden as they reach the sea.

<sup>3</sup> See also Tale #60, *Of Mangareva*, in Part IV, *Tales of a Roaming Grandfather*.

The native pilot aboard, a grave-faced fellow dressed in black like a preacher — which maybe he is — we headed by tortuous course for Riki-tea on Mangareva, the port for the Group and the residence of the Administrator, with his Gendarme subordinate. Rounding M<sup>t</sup> Duff, there stands high up on a shoulder what appears from the sea to be a roofless Chapel with a pointed bell tower. It is the remains of a mausoleum, holding the tomb of Te Ma-puteoa, the last of the Mangarevan kings.<sup>4</sup> Now passing on, one sees the village or as many of the buildings and homes as the dense forest permits. There is the red roof and the twin white towers of the immense Catholic Church, and in a clear gap close by, what looks like a red roofed home, but the last of the kings lies there. All of the graveyard around it and part of the tomb itself were buried out of sight by a landslide a few years back, which happily missed the great Church. The onetime King's House next appears with its four square pearl reserve in the placid waters, for into that coral-walled preserve an appointed portion of every hauling made within his kingdom had to be cast for His Majesty. He had learned the value of pearls, which his forefathers knew not.

A flagpole bearing the Tricolor shows where the Residency lies, up an avenue leading from a coral pier, then comes houses and the few stores of firms catering for the Gambier trade. On the flat of the land appear towering breadfruit trees; back of these on the slopes and up to the top of the hog's back, there is nothing but the straw-like grass with its waving feathery plume.

A ½ mile offshore, we cast anchor, which was the nearest we could get with our tonnage and we prepared to go ashore. But first there had to be the official visit of the Governor of these parts. At our arrival he was a young French Army Dentist, who, with wife and child, had put in already a couple of years and won promotion in rank for good work done. His is a combination of offices — Administrator, Magistrate, Doctor and Dentist — and his jurisdiction covers not only the few Gambier islands, but the southeastern portion of the Tuamotus, from Tata-koto, its northern limit, to Vai-ra-atea, to the west, giving him some 2500 natives to look after, the Gambiers' 1500 being the majority.

Leaving the Captain to do the honours, I took the dingy and, landing, had not progressed a hundred yards along the beautiful shaded road before I ran across an American, the one and only person on Mangareva who spoke English, though a few made halting attempts out of courtesy. Here was a find indeed and Garwood<sup>5</sup> became my friend and close companion, extending help in every way to make the visit pleasant. It was but 3 years since he had heard the Call of the Wild in far off Missouri and had had to respond. He had tried Tahiti, but it was too modern for him. On Mangareva, he felt that he had found his quest. No beachcomber he. I was soon to see the fruits of his hard toil. His one complaint: that the islanders have islands teeming with possibilities, but are hopelessly idle and indifferent.

We strolled along the one mile street, which hugs the shore all the way, with its background, the mountain ridge, running sharply down to it, to give Riki-tea length without breadth. I had seen from the boat but breadfruit trees, but here were orange trees laden with their fruit, mango, peach, alligator pear and bananas, all close to one's hand; patches of coffee; hedges of the tane-tane, some trimmed short, others running 10 feet high according to the fancy of the owners as to a hedging; the hibiscus everywhere, single, double, gold or red; the frangipani with its perfect scent; and croton bushes in their amazing variety of coloring. Rikiteans dwell in a bower of beauty and to make it still more pleasant, it faces the prevailing wind.

---

<sup>4</sup> [Te Maputeoa \(c. 1814 – 1857\)](#), later renamed Grégoire Stanislas, reigned from 1830 to 1857, under the name Grégoire I, and was the 35<sup>th</sup> [king of the island of Mangareva](#).

<sup>5</sup> References to Stephen Garwood can be found in *Archaeology of Mangareva and Neighboring Atolls* by [Kenneth Pike Emory](#) (1939), which can be found [here](#).

My first objective was the Catholic Church. It stands on a raised platform of huge coral slabs, as near as I could pace it, 100 yards by 50. The building itself is immense, 75 full paces in length, 25 paces in width. It is built wholly of rock, faced with dazzlingly white coral lime, its great twin towers fit for a cathedral. Across its front appears the legend “Quis ut Deus” — Who is like unto God — but behind all this grandeur lies a far from gladsome story. First, however, let us step inside. There are but 1500 folk in the four islands today; Mangareva proper has 501 by the last census, Rikitea itself but 170, including Protestants, yet this building was raised to seat 1000, and standing in the wide aisles 2000 could be housed. This was not to be the one and only Church in the Group. Each of the four had and still has its own.

This one’s columns supporting the roof are white, coated with filigrees of blue. All the usual apportionments are there, but what at once attracts attention are the main and side altars. I had read of candlesticks of gold and of priceless pearls. The former may well once have been in the heyday of the island when the gold of Peru was brought in exchange for pearls and shells. Today they are but of silver, but exquisite craftsmanship at that. Of the pearls there is no doubt. There is one (or was) worth a king’s ransom, given by the King of the Group whose treasure trove it was. It lies embedded in the centre front of the Tabernacle above the Altar. If it is a fake, as some will have it — but not those enquired of on Mangareva — it has the pearl sheen to perfection. (This may have been in desire to hide a scandal connected therewith, which is said to be to this day a sore point to the natives of the island, who felt and still feel themselves, to have been defrauded by those of the Faith which they had embraced, its home not Mangareva but the Vatican, where no questions are asked or answered.) It is the size of a pigeon’s egg. The Reredos itself has the most amazing pearl shell work, the candelabra towering high, bearing huge flowers, all those of other than pearl shell worked in mosaics to give variety of color — rose, blue and gold.

I was taken behind that Altar into a Vestry where were stored other and as wonderful stands of similar flowers for great occasions. The side Altars are hardly less amazing. That to “Our Lady”, whose Image is above, has, as a Crown for that Figure, a gorgeous tiara of pearls, the central one a fit companion to the King’s treasure. An iron ring in the broad central aisle attracted me. I found that the slab lifted and the way led down by steps to vaults where lie the bones of Mangarevan priesthood. I did not explore. I felt too strongly for proper reverence of the dead. They seem to have gone the wrong way to work. The Churches are left, but the people have vanished.

The Gambiers were first seen by white men on Aril 25, 1797, by the Duff (Captain J. Wilson <sup>6</sup>), the missionary ship on its way from Tonga to the Marquesas, and named after “the worthy Admiral”, Lord Gambier. <sup>7</sup> We took no action towards possession or settlement. The field lay open; the French seized the opportunity 60 and more years later. By then, France had recovered from the blow of Waterloo <sup>8</sup> and once again was a victorious rival to England in all departments. Her priesthood was no less active. A missionary society — the Association of Picpus <sup>9</sup> — had been founded in Paris for

---

<sup>6</sup> [James Wilson \(1760–1814\)](#)

<sup>7</sup> WWB’s maternal grandmother, Sophia Rose Pym, née Gambier, was the sixth daughter of Admiral Samuel Gambier, brother of [Lord James Gambier](#); thus Lord Gambier, after whom the islands were named, was WWB’s great-great-uncle.

<sup>8</sup> The [Battle of Waterloo](#) was fought on 18 June 1815, near Waterloo in Belgium. A French army under the command of Napoleon Bonaparte was defeated by an army under the command of the Duke of Wellington combined with a Prussian army under the command of Gebhard von Blücher.

<sup>9</sup> The priests of the [Congregation of the Sacred Hearts of Jesus and Mary](#) are also known as the Picpus Fathers, because of Rue de Picpus in Paris, where they had their first house. The Vicariate Apostolic of Eastern Oceania (including Tahiti, the Marquesas and Hawaii) was assigned to the Congregation of the Sacred Hearts of Jesus and Mary (Picpus Fathers). Similarly, the Vicariate Apostolic of Western Oceania (including Micronesia, Melanesia, Fiji, New Zealand, Samoa, and Tonga), was assigned to the [Society of Mary](#), known as the Marists.

the spread of the Faith in heathen lands and in 1833, one of its priesthood had been appointed Bishop of Eastern Oceania. Valparaiso became his headquarters and from there, 5 priests sailed for the Gambier Islands, amongst them Fathers Caret <sup>10</sup> and Laval, <sup>11</sup> who were a couple of years later to start all the trouble on the island of Tahiti which led to its becoming a French Colony. These 5 arrived on Mangareva in 1834.

They found many thousands of inhabitants. Every valley, now deserted, teemed with life; there were 4 Chiefs on the main island alone, ever at war for the mastery, all were free-born. The missionaries soon had them to heel and in servitude. Theirs seems to have been no Gospel of Love and Gentleness, but rather of Terror present and Hell afterwards for the Evildoers, according to the white man's standard, and of Work, endless and unceasing, to which these natives were wholly unused — their food was at their hands; a rough trail was good enough for travel; a leaf house a perfect shelter; a lava lava their clothing; a rock platform the place of worship of their gods.

But the priests drove them hard. The mighty Church slowly rose; roads of rock boulders laid one by one by hand were built round the island, and here and there to the villages over the hog's back — I walked many miles upon them. Smaller chapels of coral were built, their roofless walls are seen today where not a soul resides; the people were forced to live and sleep within damp stone walls, and those same homes stud the land, not one inhabited. From King to humblest native, all were crushed before the Terror.

Those who rebelled were given short shrift. Hard by the House of God — but hidden today from view by dense thicket, as if for very shame — lies those pioneer priests' Dungeon. Whom they condemned, nor King nor people could save from incarceration. I found a stone building with walls 3 feet thick, two chambers, 9 ft by 9 ft each, a narrow entrance with the holes clearly to be seen where the bars of iron ran and very close at that. High up lies a narrow slit through which food was passed. The roof as solid as the walls, and upon the roof a Watch Tower for the guard, set day and night. Such was their Gospel of Love.

Those same missionaries were clearly out for visible results in their converts. They raised a Nunnery for the women and Monastery for the men, the latter on Aūkena Island. Both are ruins now, and of native nuns and monks there are none. The very suggestions were preposterous — and at such a stage. I would see that Nunnery, so passed the Church to climb a shoulder of M<sup>i</sup> Duff, reaching first the roofless tomb of one of South Sea Royalty. Some subjects sleep their long sleep hard by. The tomb is a lofty structure, but plain, the legend on the front, of course, quite beyond me — in Mangarevan — but the date is 1896. The site well chosen on a sort of Lookout spur, opposite Aūkena Island, where on another similar spot, but lower, there can clearly be seen a one-roomed structure of white coral, open on all four sides, where it is said the crushed King of the Group delighted to sit in peace for long hours, gazing over his Kingdom of a Crater and think of a wilder, but freer, Past.

The stone roadway leads on another half mile to Ro-ru-ru, nothing but a name, where right under the scarped face of M<sup>i</sup> Duff, a massive and towering rock wall arises; its face is long, its sides reach back to the precipice. Within that wall attempt was made a century ago to change women from what time unknown they had been looked upon as born for, to be the mothers of a new generation. So hopeless a tangle of growth lies within those outside walls that it was hopeless for me to attempt to gain the walls of the Convent itself. Tradition has it that guards were posted day and night, as at the Dungeon, to keep would be Romeos out. Across the water in a valley, close adjoining that white coral Lookout

---

<sup>10</sup> [Francois d'Assize Caret \(1802–1844\)](#)

<sup>11</sup> [Honoré Laval \(1808–1880\)](#)

of the King, lie the ruins of the Monastery. The two ruins are a fitting end to so mad an attempt to force upon natives a life so incongruous and unnatural.

There was no going further that day, so I returned over the “forced labour” roads to find Vespers being sung, a handful within joining with the priests in a poor attempt at Gregorian music. I did not intrude. The dingy awaited me and I slept aboard.

In testimony of the above, this is what a French historian, Eugène Caillot, in his “Histoire de la Polynésie Orientale”,<sup>12</sup> says of these missionaries:

They introduced an intolerable despotism... they wished to realize in the Gambier Islands their dream of a theocratic Government... never in any part of the world was despotism pushed so far as in these islands. The inhabitants became slaves... In short, during more than 30 years Terror reigned in the Gambier archipelago.

He tells of the prison and the forced labour, the impotence of the Kings and Chiefs under the iron tyranny of Laval, Head of the Mission, and of how, at long last, the terribleness of the conditions reached the ears of Paris, and Parliament demanded and secured an end to it. That was in the '70s. This Group, entirely independent of Tahiti's Sovereign, came under the French Protectorate without a struggle on February 16, 1844. The Paramount Chief was at that time Maputeoa.

Laval went off to Papeete, where for nigh a decade he dwelt without a friend, even among his fellows. He was regarded as both a fanatic and inhuman, and he was the subject of attacks in many a brochure. Once, stung by a virulent and intemperate pamphlet, he fought back, securing heavy damages. Died and buried at Papeete, November 1880, regretted by none, aged 73.

Caret, after his futile visits to Tahiti, visited Paris, then returned to the tyranny at Mangareva, thence to the Marquesas to found a mission, then again to Tahiti to become Director of the then developing work. He was for years an ailing man and when, in 1844, the insurgent natives burned the mission — and with it, his library and precious MSS on Tahitian and Marquesan languages — his end was near. He asked to be taken to the Gambiers and, carried ashore, he died, October 1844, aged 42. He was buried in the vaults beneath the nave.

Testimony of Jacolliot, Juge Impérial de Tahiti, in “La Vérité sur Tahiti”, 1869, page 29 et seq., translated:<sup>13</sup>

During the early days after his arrival in Oceania, M. de la Roncière was occupied with a very unfortunate affair, the energetic solution of which would draw against him the whole clerical body. Here are the facts.

Some members of the Picpus, Catholic missionaries had been for some 30 years settled on the Gambiers, small islands lying to the south of Tahiti, distant some 15 days by sea. After having converted all the natives of these isles — numbering some 2000 — they implanted there a theocratic government which surpasses all that imagination can conceive and obliterated all human dignity. Not content with that, they had done as their confrères in India and China had done, who for the greater glory of God had set themselves up as bankers, rice speculators, silk and cotton merchants, and redeemed “In the Faith” poor little Chinese, who had never been for sale. The Picpus in the Gambiers

<sup>12</sup> [Histoire de la Polynésie Orientale \(Paris, 1910\)](#), by A.C. Eugène Caillot (1866–1938)

<sup>13</sup> [La Vérité Sur Taïti \(Paris, 1869\)](#), by [Louis Jacolliot \(1837–1890\)](#)

had monopolized the search for both pearls and shells. All the natives were compelled to search for these, in return for which they were fed and clothed.

Some years back, a M<sup>r</sup> Pignon, his wife and his nephew, M<sup>r</sup> Dupuis, had left Tahiti for the Gambiers to trade in shell. Having allowed them to establish themselves, the Fathers soon found them formidable competition. The natives secreted so far as possible both pearls and shell to sell to the Pignons. The mission saw its revenue diminish; the Father Superior took heroic measures. At the head of 50 police which he himself had trained for the requirements of his government, he arrested Pignon, his wife and his nephew, confined them in a dungeon, then destroyed the home and the storehouse of these poor folk.

The next day, reaction set in. Pignon loudly proclaimed from his prison that he would demand justice from his Emperor. That was serious! What was to be done? In the careful enquiry that has been made into the facts, evidence of the attempt by poison to get rid of Pignon have been proved. A dog to which Pignon gave some fish which had been served him in the dungeon, and which appeared suspect to him, died in a few seconds.

Embarrassed by his prisoners, Father Laval ended by chasing them off the isle, but retaining Dupuis. On arrival at Tahiti, Pignon demanded justice. M. de la Richerie, the then Imperial Commissioner, had opened an enquiry when his successor, M. de la Roncière, arrived. The new Commandant, revolting at such acts, set out for the Gambiers, boarding a ship accompanied by numerous magistrates and officers. The Report, the result of his visit, is distressing to read. The representative of France could not only see that the atrocities of which Pignon had complained had actually been practised upon him and his family, but that there existed a state of semi-imbecility to which the missionaries had driven the natives. Some of his findings:

1. All who were restive under the iron yoke of the mission ended by disappearing.
2. Chief Kerkorio died 8 days after having recovered from the mission different sums of money due him.
3. The heir of the Chief, who had preserved a fragment of authority on the islands, an authority which the missionaries knew how to handle for their own ends, having shown signs of independence... the Lord called him Home!
4. From the pulpit, Father Laval menaced with prompt death those who did not obey his orders.
5. The 2000 natives of the isles were but coolies, slaves occupied in search to enrich the mission.
6. All the unmarried young girls were imprisoned of an evening within walls well guarded by police so that, so said the Draconian Code of Father Laval, they could not be free for unchastity.
7. On the Eve of the Great festivals, all the married women were alike gathered in to prevent all relations with their husbands.
8. *One hundred or so places of confinement* were so used.

9. All parties suspect of dishonesty were sentenced to from 3 to 6 months in gaol.
10. At the time of M. de la Roncière's arrival at the Gambiers, Dupuis, the nephew of Pignon, had spent 3 months in the dungeon on suspicion of adultery, although according to the Judgement rendered in the case by Father Laval, "it was pretty nearly certain that adultery had never been committed."
11. There came a day when a shipwrecked crew from a Chilean ship arrived at the Gambiers in a small boat. "Keep off," cried Father Laval to them. "You shall not foul these tranquil spots." "We are poor shipwrecked folk." "Keep off." "We are dead weary." "Keep off." They were not allowed to land and the unfortunate people were compelled to make a further journey of 20 days at sea before arriving at Tahiti.

I possess a certified copy of all their depositions. After 2 years of enquiry, hearings, witnesses and energetic struggles, M. the Imperial Commissioner de la Roncière obtained a decision from the Minister of Marine which compelled the pious and saintly government of the Gambiers Islands to pay 140,000 (gold) francs indemnity to the unfortunate Pignon and his family.

One should read the letter that Father Laval wrote on the subject to the Superior General of the Picpus mission in Paris and note what tears he shed upon that money which he was compelled to disgorge.

I possess certified copies of all the above enquiries, reports, also the letters of Father Laval and the Bishop of Tahiti, sent for recording... all are in the safe hands of M. de Kératry.<sup>14</sup>

## II

I met Garwood ashore at sunrise. Rikiteans are early risers too, so we first paid a courtesy call, making the round of the five stores, of which the Chinese run three. Then we faced for the hog's back for a view of the Group as a whole. At once it was a climb, and stiff at that, but the priestly laid roadway helped. Standing high at the summit upon an ancient Lookout Stone for canoes or ships coming thro' the Pass, which was told to all by blowing a conch shell, a huge cartwheel of coral, hauled up hither one wonders how, so great its size and weight, its entire surface chiselled with mystic marks; the view obtained of islands in that huge crater's mouth was worth the climb. The weather was perfect; not a cloud in the sky; and the heat was intense.

Below us, hidden amidst the fruit-laden trees, lay Rikitea; the other nine islands could be seen outlining the one time volcano's lip, and miles beyond these, the Barrier reef with its endless foam. Facing round, the main portion of Mangareva lay below. The ribs from the hog's back on which we stood are not so close as on Rikitea's side; they open at once and steadily broaden out till before they reach the sea, there are valleys with many fine acres of level land. We were about to descend into Gata-vake valley, from which we were to make for the next called Ati-ao-ha, thence by canoe to Ganu-tu, where Garwood has his country home. These valleys, like all the rest, once teemed with inhabitants; now you can count the residents on one hand.

---

<sup>14</sup> [Émile de Kératry \(1832–1904\)](#)

But every acre is owned. Rikitea holds the remnant of the population who are, by inheritance and lapse, rich in land, but poor in substance. The wild aiho grass <sup>15</sup> rules where once was cultivation; it runs riot, in places higher than one's head. It has a thin reed-like stem, a little thicker than ordinary straw. It is gathered and dried, cut into lengths of about two feet, and used to make hats — not of the Panama form, but the European, as a rule. The grass finds a ready sale in the Tuamotus, for those Atolls have none of such things and are in steady need of head covering.

As we dropped down into Gatavake valley, we passed a thicket right under the towering face of M<sup>t</sup> Duff, where lies a raised rock platform of seven terraces, the marae of Rouriki. It was here that Gatavake's Chief and people held their cannibalistic feasts. Victims were not hard to get with war constantly carried on, valley against valley. It seems that Rikitea and Gatavake were a combine against whom the rest fought. From that platform, one could see the north end of Mangareva and the last battleground of the rivals, where Gatavake's Chief was slain; the coming of the white men put a stop to those wars. Yet not quite, for the last took place, despite the priests, at no less a time than the Dedication of their House of God. All spears had to be handed in before worship and feast commenced, but concealed upon those rival factions were daggers of pearl shell, and before the feast was over, there was slaughter, every Mangarevan in it. Skulls and bones still testify to the purpose on which we stood. Some Roamers would doubtless have gathered a bone or two. It has never appealed to me to walk off with dead men's bones. But their implements of preparation for the feast is another matter. I secured a stone hatchet head, a souvenir of a gruesome spot, its edge still clear.

We passed on and duly reached the second valley. Here a half-caste shows his white blood, for he is a worker; makes copra; has an orchard; cattle roam within barbed wire fence; pigs roam around and fowls. A trim little schooner shows his own ability at his white father's trade. His dug-out with its outrigger lay upon the beach. We made use of it to make round the Point to Ganutu. The water way lay over a coral bed of amazing colouring, such shells to see, fish darting here and there, Portuguese sailors <sup>16</sup> of violet hue, in size out of common, with *bêche-de-mer*, beloved of Chinamen, in abundance.

Hauling the canoe beyond the possibility of its going off on its own account, there was still a steep climb before us, before Garwood's grass hut appeared below. That descent into the new valley, Natsu-va-ki, was quickly made for there was shade to gain and watermelons awaiting. Here was evidence enough that my companion carried his belief in work into practice. His vegetable garden, all hand matted, held cabbages and potatoes, stringed beans and tomatoes, melons of course, and two acres of tapioca. His one enemy is the native rat, but two cats appeared upon our arrival, a porker keeping them company, and chickens many. He looks forward to a team of horses and a plough, then he will tackle the whole valley. He is an object lesson to the Rikiteans, but they seem all too indifferent to his teaching. They seem to have lost all energy; they struck me as a sad and disheartened lot. But Garwood has not lost hope. A rest and then, loading me with giant cucumbers and himself with melons, we returned the way we came. It was getting late and the dingy had gone. My friend's last kind office that day was to secure a most rickety canoe, with a kid almost as erratic to handle a paddle. A ½ mile under such conditions was a fitting finish to an interesting day. That night I spread my mattress on a hatchway; there was a full moon which lit up every hill and dale of the island; the sea was as a millpond; the heavens a maze of stars; nothing was to be heard; all but the watch aboard were sleeping. I felt as if sleep was a thief, but the soft night breeze got me at last, and I awoke just as the sun rose over the eastern lip of the crater for another glorious day.

---

<sup>15</sup> [Miscanthus floridulus](#)

<sup>16</sup> [Portuguese man o' war \(Physalia physalis\)](#)

A launch and a whaleboat in tow, having to make a run to Atiaoha valley to pick up the half-caste's copra, I took the opportunity of visiting it by another route. It was a whole morning's job and the crew a jovial crowd. We returned to a scene of great animation aboard. The Captain had given orders for 5000 oranges to be brought him, 100 bunches of bananas, also pigs and chickens. They came, came all day, canoes, boats, sailing craft from every isle, and brought free gifts of the same in addition to their sales, out of pure goodness of heart. I went ashore and obtained the local prices from the storekeepers: oranges 3 dollars 1000, bananas 25 cents a bunch; I could not get the livestock quotations. For fish, you are not expected to pay, but if you asked a party to expressly fish on your behalf, 25 cents would be rich payment and the catch inevitably quite beyond anyone alone to consume.

Naturally I was approached as a possible pearl buyer, but though many were produced, they all were of poor quality and none of perfect shape. Fine pearls are not now often found in the crater. I was told by one of the local divers of two reasons for the special excellence of the Gambier pearls of old time, and occasionally still. The one because of the poor quality of the shell, which, weak against attack or bruise, compels defence of a higher order than where the shell is strong; the other because of the clean ground of the crater's bottom. A white ground of clean sand means the pure pearl colour; a dirty ground, a heavy disadvantage. The day was ended by a long, lone ramble far along the Rikitea coast in the opposite direction of the first day to find the sparsest of settlement, yet, all the way, breadfruit and oranges in profusion.

On the morrow, the Administrator would see the school on Akamaru and I was among his guests. We made good time in his fine launch, but had to twist and turn to avoid many a submerged reef, and whilst the authorities went to their business, I took my own Inspection around with much profit. The Catholic Church on this island seems to be the pivot from which all roads run. It is beyond question too large; it was but half full of seats. There are today only 85 inhabitants on Akamaru, of whom happily 25 are children. For a native village, the edifice is most imposing, with its portico of white Corinthian pillars, its twin towers, one surmounted with a Cross, the other with an Image of the Virgin and Child. Each tower has its spiral stairs shaped out of coral rock, a wonderful piece of work. I ascended to the Belfry in which one bell hangs below the Image, whilst two hang below the Cross. The roof of the Church is domed within, covered with whitest of plaster and stencilled with countless blue stars. The Altar and Reredos resplendent with inlaid pearl shell work, the flowers and their leaves wonderfully wrought.

The stretch of land on which the village stands is covered with a maze of fruit trees, which it is hard for one who has not seen it to conceive. The tangle is a riot of bananas, coconuts, breadfruit and orange trees. Food comes so easily to hand that no attempt seems to be made at cultivation, save on the hillsides where the sweet potato is grown. The waste must be enormous. There are acres of coffee, none gathering the berries; there is pepper and tobacco and huge mango trees. If but a half mile stretch of land, such as I covered in a stroll, holds so great abundance, what must the entire island hold? The population has gone. The stone and roofless houses, just as on Mangareva, stand thick along the roads. The more modern ones of wood were mostly barred up; there are too many for the remnant who remain.

By this time, I saw the population moving towards the landing stage, laden with gifts, fruit, livestock and pearl shell. There we gathered; the unnecessary handshaking all round was gone through; and we sped off, watched till a point of land hid us from their view.

At sunrise, we made ready to leave the Gambiers. The pilot aboard, we made across the Pass to Taravai, there to pick up more copra. This island teeming like the rest with food for a thousand has today for population just 4 families, 37 souls in all, of which 17 are children. What it once held may

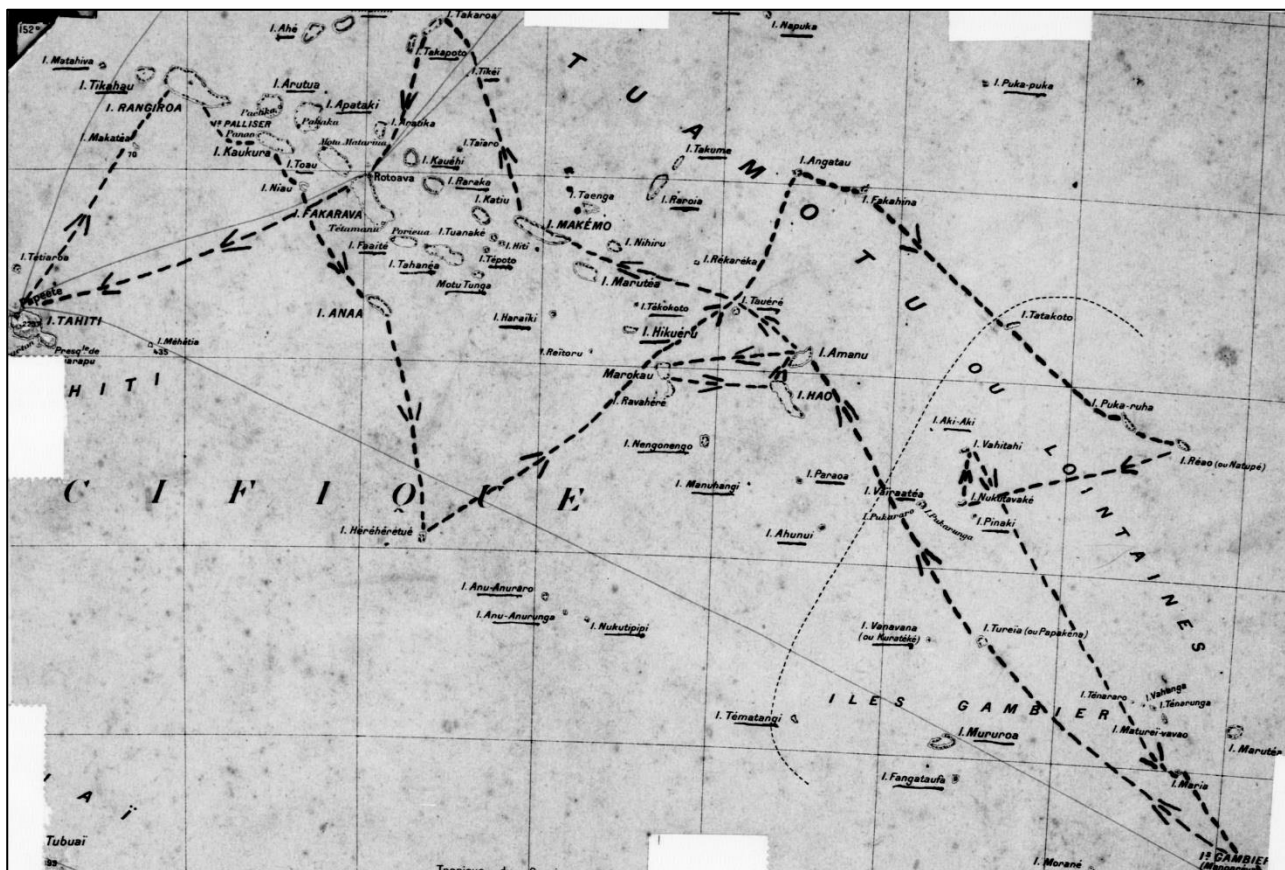

be inferred, like the rest, from its Church, which could easily hold 500. Some energetic ones in the Past determined to make their Landing place unique. Stepping ashore, a high coral wall faces you, built clear across the avenue leading to the village, with an arched gateway in its centre. Passing through, you are at once in a bower, which enshrouds you till you reach the Church. It has a different roof from the others. This one is ribbed with stout timbers. Those pioneer clergy were surely excellent architects and were served by equally capable carpenters and stonemasons. One of the former accompanied Caret and Laval to Tahiti. With less zeal and more common sense, a different tale could be told today. Dropping the solemn pilot here, which is his home, the Captain headed through the Pass, then northwest for the long, lone run home.

Three memories of the Gambiers abide: the picturesqueness of the Group; the Waste of food; and a vanished people through untempered Zeal.

## THE TUAMOTU ISLANDS

### I

Makatea — Rangiroa — Kaūkura — Niaū — Anaa —  
Héréhérétué — Fangataū — Fakahina

“The Bretagne”, <sup>17</sup> 800 tons burthen, which bore me off from Tahiti, like most old ships in the South Sea, has its history. It sailed in the Long Ago from Glasgow as a British barque, the “Ada Iredale”, off Cape Horn took fire and was abandoned, but, taken in tow a few days later by a French ship, was towed to Tahiti. It was then a sailer only, four masted; it uses its sails today when occasion serves, but is fitted with oil engines as its usual means of power. It has wireless and electric light, but does not run to fans. There being no dry dock at Papeete of her size and having been long at sea, her speed is retarded by barnacles and weed, but six to seven knots her capacity. She is a Tramp today, pure and simple, her business being copra gathering and trade with natives, and such is her present objective.

So much I wrote at the time in my Notebook. It is now all in the Past Tense, for not long after, the Bretagne capsized and sank off the coast of Oregon. <sup>18</sup> All onboard escaped in its boats.

The passengers were varied, native in chief, as was the crew, some third class who kept forward, some second class who seemed to sleep wherever there was room, especially on the hatchways, the first class, besides myself, a Government Inspector. But we were not the only ones in the saloon with the robust and genial Captain. He had wife and daughter aboard, and the Mate was his son. There was the Supercargo, a half-caste, schooled in the States, of charming manners, a Wireless operator full of life, and a young American employee <sup>19</sup> of a San Francisco shipping firm (which had some financial interest in the voyage) sent along for a health trip, but whose end was tragic. A cabin to myself and an excellent French cuisine left little to be desired.

A run of 120 miles brought us off Makatea — first reported by Roggeveen <sup>20</sup> in 1722 — an island some five miles long by two and a half miles broad, containing untold deposit of phosphate, worked by a combined French and British Company employing 800 men. It is no Atoll — though included in this Group — its name meaning “Reef raised out of the sea”, rising as it does with cliffs 300 feet in height, a tableland with one slight central rise. It has poor anchorage and at times is unapproachable. We had no reason to stop, so passed towards Rangiroa, 70 miles to the north, and though we sighted it in an early afternoon, we could not make the passage into the lagoon before darkness fell, so had to

---

<sup>17</sup> *Bretagne*, ex-*Ada Iredale*:

<sup>18</sup> According to [this source](#), the *Bretagne* sank on 5 October 1929, which suggests that WWB travelled in the Tuamotus in about early 1929.

<sup>19</sup> The man’s name is given as Gardiner in *Pauranie* in Part XIV, *Tahitian Vignettes*; the name on his headstone is Wesley S. Gardiner. See also Tale #92, *Of the Marquesas*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>20</sup> [Jacob Roggeveen \(1659–1729\)](#)

tie the wheel and circle all night long at a safe distance. Atolls are not places off which one can drop anchor.

Rangiroa, and Fakarava, not far off, are among the largest Atolls in the world, the former the larger of the two. They are not perfect rings of coral as geography books instruct us — very few are that; these two resemble rather irregular parallelograms. The short ends of Rangiroa are 40 miles apart, and the distance between the sides is 20 miles.

The circumference of this huge and massive coral wall, often half a mile wide and with its lagoon anywhere up to 30 fathoms deep, is roughly 126 miles. This the tiny coral polyps built and took aeons in the doing.

The entire surface of an Atoll is not covered with brush and trees, as most think; there are gaps of miles where the waves allow no sand to gather, nor coral to disintegrate to humus of which the coconut thrives. The entrance to the lagoon is, if there be any — and despite the books, there mostly is not — on the side opposite to the prevailing Trade wind. Through that break, the water rushes in and out with the tide, and sharks hang around it in plenty. Rangiroa has three breaks, one on the north side and two on the west, through which ships pass, but not of nights.

An Atoll lies so low that as one approaches, it appears as if the palms were growing out of the water, and drawing closer, it looks as if there were not one, but many detached islands; it is the gaps which deceive the eye. Atolls, in general appearance, are as alike as peas in a pod, yet each has its own special attraction to those who are out to find them.

The Group, which runs for over 800 miles and includes over 80 in number, was known to the natives as the Pou-motus. White men corrupted the word into Pau-motus, which was not at all to the liking of the inhabitants since it meant “the Conquered Islands”. They therefore petitioned the French to change the name to Tua-motu, “Distant Islands” (from Tahiti), and since 1852, this has been their correct title. Their French name is “Les Îles Lointaines”, which has, of course, the same meaning. The early European navigators of many nationalities, starting with Le Maire in 1616, include in the list such famous sailormen as de Bougainville and Wallis, Byron and Cook, Bellinghausen, Carteret and the Spaniard Boenechea. They one and all had a healthy dread of them, writing them in their charts as “the Labyrinth” and “the Dangerous Archipelago”. It is dangerous still, despite the modern aids to shipping, the proof the many wrecks to be seen as one traverses those waters. They are not densely populated; there are but 4000 scattered over the whole of them. Their life is hard and lonely, copra and pearl shell their main trade, coconut and fish their food year in and year out. In the Past, they undoubtedly varied their repast by cannibalism.

---

At daybreak, we headed for the break in the reef and entered Rangiroa. Finding that the village close adjoining the Pass had moved itself bodily, save for the aged and decrepit, clear across the lagoon for the gathering and making of copra there, we had no course left but to head that way. It was a journey to the horizon, and all the passage as a millpond. A full mile offshore, we had to drop anchor, the ship’s launch and its whaleboats carrying goods to and fro.

I went ashore. Reaching the edge of the reef, on its inner side, the last 50 yards had to be waded. The hours went swiftly by as I roamed through the maze of coconut trees growing in the wildest confusion, the palms at every stage of growth. There seemed to be no plantations properly so called, nor attempt at keeping down the undergrowth. Nothing else seemed to be cultivated. The 400 inhabitants of Rangiroa have no drinking water, save the rain which a few catch off the roofs of their homes, so use what is computed to be a third of the yearly crop of nuts for drink. They work seemingly only through their keen desire for our clothing and diet, flour in chief. From what I saw at midday, the amount of boiled flour dumplings they can consume at a sitting is amazing; bread does not appeal. Doubtless the fifty sacks left with them in trade would soon disappear, then more work ready for the next ship.

A stroll of half a mile across the reef brought me to the outer side, where the waves were having a riotous time. There are but four villages, all of the same inhabitants, since they move bodily from one to the other, spending three months in each to make the copra, leaving the old and infirm where we had seen them. There are schools of a kind and the children seemed a happy crowd.

---

A squall delayed us somewhat in making the outlet from Rangiroa in the morning, but once through, we headed for Kaūkūra, another of the larger Atolls, thirty miles around by twelve miles across. We were off it by dark, forcing us again to tie the wheel and circle till daylight. Here a lighthouse of an elementary kind has been erected, served by a kerosene lamp lit when the natives feel like it or when a ship is seen on the horizon towards nightfall. No such light for us; a lamp moving ashore gave us warning of our nearness.

This Atoll lies on the main route from 'Frisco to Papeete and is considered highly dangerous of approach at any hour, as large stretches of the reef are bare of tree or brush and are hugely misleading. Save for small schooners, there is no entrance, but it is a very busy isle, for its lagoon is held to be the richest in pearls of all the Archipelago. Approaching as near as we dared, we steamed slowly back and forth opposite the Landing Stage whilst we sent ashore a score of our passengers with their marvellously assorted baggage, besides flour, rice, sugar and beef to replenish a Storekeeper, one of the numerous Chinese who carry on that business throughout the Tuamotus.

We made no haul here. There is keen rivalry over the copra among the merchants in Papeete, and Captains oft find the goods sold and carried off which they came to gather in. First come, first served, is the motto on some Atolls, whilst a Tramp is shown no mercy by the regular Traders. Some 700 natives are on Kaūkūra, the main village being where we operated for the few hours before leaving. Sails up and a gentle swell, we ran along the Atoll's southern side, the reef for a dozen miles bare of everything, the sun playing on the still waters of the lagoon with delightful effect.

---

Before evening, we were of Niaū, one of the small Atolls, but eight miles round and six across its lagoon, but unique in the Group as the highest of all, there actually being a cliff ten feet high. It would seem to be the result of an uncompleted upheaval, the lagoon within thus well protected. On landing, we found no need for a prolonged stay, the natives few in number, trading poor and copra none, so re-embarking, we set our course for a more important Atoll, a night's journey. Beneath a starlit sky, we gathered on deck to 'listen in' to a concert given at Los Angeles, 3000 miles away.

---

By coffee's hour, we saw Anaa ahead and by 10 a.m., we were ashore. Here again there is no entrance to the lagoon. The reef, twenty miles around and ten across, has been blasted for a narrow pass for whaleboats, leading to a low stone pier. Adjoining is a lighthouse, this time well built, but its height scarce half as high as the palms beside it, its gleam a coal oil lamp. On this lagoon I enjoyed a sail, for the Inspector had to visit the village of Tem-arii and the Catholic priest stationed here arranged quickly to take us across by boat. Those natives are excellent yachtsmen and, with a nice breeze, we scudded along, the lagoon a lovely sight, a coral green blending with a Cambridge blue beneath a blazing sun, with wonderful marine life and growth below, and all too soon we landed amid a gaping crowd, for visitors are few.

The Inspector went on his business and I, on mine. This village has broad avenues, kept scrupulously clean, fine coral sand the roadway, with palms set in regular sequence on either side. Everyone wanted to shake hands. My cicerone was a youth who, after duty done, climbed a coconut tree and delivered milk enough for half a dozen. The School, in session, sang for our edification several of their melodies, then, with practically the whole village, accompanied us to the boat. Of course, we had to have gifts. They have but coconuts and livestock; of these we bore off a dozen nuts and two live chickens.

Arriving back, we were led to the Chief's home, a most ramshackle affair of wood, outside of which we found chairs set. On these we sat, whilst formal presentation was made of still more nuts by the Village Orator. The Captain aboard had finished his business and was blowing his siren, anxious to be off, so there was no time for more, and we quickly gained the ship.

On Anaa, there is but a population of 200, all told. Here the great hurricane of 1906 <sup>21</sup> took heavy toll. These low lying Atolls are at the mercy of wind and wave. One hundred Anaans perished, and coconut trees — their only refuge at the time — were pointed out to us as we crossed the lagoon, lying beneath the waters, far out from land, deposited there roots and all, by that terrific blow. But Anaa has recovered, if not in human beings, at least in palms. There seemed an immense quantity, some like giants, head and shoulders above all the rest, these same always alone, out in clusters by themselves, towering amongst their shorter brethren, breaking the monotony of the line as seen from the sea. Anaa boasts of a fish in its lagoon, found nowhere else in the Tuamotus. They call it Hūé-Hūé. It is white, of a fair size, having a parrot's beak. If the natives wish to fish in the sea, they carry their canoes across the reef; in parts, no small distance. Pearls found here are only of poor quality, known as Pipi pearls, of all colours, small and unmarketable. Here are caverns in the reef, which lead down to unknown depths, unexplored by superstitious natives. How formed in these hard coral walls, none knew.

---

At break of day, Héréhéretué — an Atoll rarely visited, being so far out of the way — was sighted from the crow's nest and by breakfast time we lay off its northern side. A stiff northerner was blowing, which made landing very difficult and risky to newcomers. Some houses were to be seen standing among the palms and large areas of the Pandanus, but our siren brought out no one. A whaleboat was sent ashore and, riding a comber, landed safely on the reef, whence a long wade brought us to the village. It was deserted and we thought of returning, but passing the inner side of the Atoll, natives were to be seen paddling across the ten mile broad lagoon.

---

<sup>21</sup> See [The Tahiti Hurricane](#) on page 2 of the 21 March 1906 edition of the *New Zealand Herald*. "The island of Anaa suffered most, no fewer than 95 lives being lost..."

Only thirty natives make Héréhérétué their home, but those met with were very far from being rough and uncouth. They seemed delighted at our call. It took till evening to load and unload, each landing and each launching an exciting piece of work. There was a choppy sea all day as the steamer circled offshore, the Captain keeping a watchful eye on current, which often is exceedingly strong around these Atolls. All went well and at sunset, we got under weight and now headed clear through and across the Group for our next objective — a three days' run.

---

Passing on our way close to Marokaū and Taūéré, we hove to off Fangataū in the afternoon. We had mail to drop. From the sea, this Atoll, a six mile square of reef and lagoon, has a specially pleasing look about it, with a ring of white sand before the ring of green palms and other far larger and broader trees begins, and through them glimpses caught of the bluest of the blue encircled water. Again, no Pass to within. Its people are progressive, for an auto lorry was to be seen scudding along a road which runs clear round.

Sending a whaleboat ashore, we were prepared to follow in the launch and take our chance at landing from a boat in tow, but it was not to be. There was a sudden cry of "Man overboard." In a trice, the Mate standing at my side cut a life buoy loose and hurled it into the sea. The *Bretagne* still had some way on her and man and buoy were soon astern. These natives are all expert swimmers; he soon had the buoy under his arms. A boat was lowered with a rush; men leaped in and bent the long sweeps with a will. It was Sharks which made them hurry. If they scented him, they were too late. He was soon aboard and working feverishly like the rest, for he was but part of a mishap which had happened.

The launch was being lowered when a davit broke. He and the young San Franciscan were standing at the taffrail <sup>22</sup> assisting when the boat fell, tilted up at one end, and both lost their balance. The native plunged into the sea; his companion was not so fortunate. He, too, dived, but was a fraction too late. The launch swung in and received him, striking hard, though the full force was broken by the launch being half full by then of water. A sore body, but no bones broken. The little motorboat suffered more; it lost its stern and with that its rudder. We got the wreck aboard and men repairing. Meanwhile, the boat sent, returning with a report of no business ready to be done, settled matters. We turned about and headed for what the Captain assured me would prove to be a live spot.

---

The 280 natives of Fakahina are no sloths, as I soon found out. They live on an Atoll, a circle of thirty miles, the land continuous and thickly covered with palms and trees, except for one break of a quarter mile where there is neither land nor real passageway to within, for though the reef sinks at that spot, the water is only deep enough for canoes. The whole way round is barred to ships.

I was soon ashore. We landed at the village of Tatakoto, <sup>23</sup> where there are Ford cars and heavy trucks, a five-seater "Overland" besides. I would like to see how such things are landed without lighters or cranes. Fakahina evidently means business; it has cut out the middleman, the Chinese. It has a Co-operative Society, with a Frenchman at its head. It exports over 700 tons of copra yearly and buys its goods direct on a cash basis. It has turned its back upon the Chinese storekeeper, into three of whose stores I entered and found all the proprietors contemplating leaving. The whole thirty miles is under cultivation and the undergrowth is kept well under.

---

<sup>22</sup> A [taffrail](#) is the aftermost railing around the stern of a ship.

<sup>23</sup> The main village on Fakahina is now called *Tarione*.

The main village has a prosperous look; a fine avenue 40 feet wide leads up from the Landing Stage till the main Highway round the Atoll is reached. There are picturesque homes built in French Colonial style, iron roofs to all, a Church and a well attended School. The water supply is met by concrete tanks filled from the many roofs. I saw fig trees, but no other fruit grown. The natives seem a happy crowd, children and their elders, when not otherwise employed, enthusiastic over exciting games of marbles.

Within the lagoon there are only Pipi pearls; I saw many, some jet black, others yellow or bronze. I went searching myself for the water is not extra deep till well out from the inner shoreline, but it needs a trained eye to detect the shell amid the horde of other kinds one treads on. Here, however, I saw another sight worth watching, the loading of whaleboats with copra for the ship, the men wading through seething water with loads of 300 lbs on the back of their necks, three sacks piled one upon another, yet never a stumble. All day and the next day, they kept at it from sunrise till dark. I was told that such heavy labour shortens their lives, but along with the pearl divers of the Group, they take their chance. I was to see the truth of this. The wrecked launch was ready for business by the next day's dawn and by it, I went off for a lone stroll. That drop in the reef was my objective, a eight miles' tramp. Weather conditions perfect — 90° in the shade — the road smooth with a coating of sand on the coral, land crabs innumerable and an occasional rat. Everybody was in Tatakoto, but the scenery more than compensated for the lack of humanity en route.

We left as the sun was setting in a sky remarkable even for the Tropics; at the zenith, purest of blue; below ran a deep band of palest green; below that a band of gold and at the horizon's edge, rays of red to set all off.

---

It was here that I began to be concerned with that young San Franciscan. Apart from the shock of his fall, he had throughout been suffering from the bites of the midget flies, which today infest some parts of the Marquesas Islands. The *Bretagne* had picked him up on its last journey from the States to Tahiti by way of the Marquesas, and a great reader of the South Sea Tales, he had been keen above all things to see and explore the Typee Valley on Nuku Hiva, round which Herman Melville built up his Classic of these waters.<sup>24</sup>

Despite the warnings given him of the danger from these minute insects — so bad of late years that the French Government had had to remove the Centre of its Administration from Nuku Hiva to Hiva Oa — he landed, secured a mount and with unprotected arms, roamed far up the valley amid the tangle. Those flies had not missed him and had poisoned his system, producing abscesses on his arms where they had bitten him. He had treated himself, refused aid of anyone, used savage means with razor. He was by now not himself, moody, despondent, yet hasty, suspecting plots against himself, lost sleep. All of us knew, but to none would he turn for help.

But now I won his confidence and succeeded in allowing the gentle hands of the Captain's wife to minister to his needs. That midget fly, so tiny as scarcely discernable to the eye, had got in its deadly work. Our hope was yet to save that young life in its mid-twenties, but could the thing be done?

---

<sup>24</sup> Regarding the fate of the young San Franciscan, Wesley S. Gardiner (1903–1928), see also Tale #92, *Of the Marquesas*, in Part IV, *Tales of a Roaming Grandfather*.

## II

Tata-koto — Pukaruha — Réao — Nuku-tavake — Maria —  
Turéia — Amanū — Marokaū

The Atoll of Tata-koto — the same name as the village we had just left — is no coral ring, but, rather, a narrow parallelogram thirteen miles by five, well covered with trees other than palms, and has a noble beach of sand.. No entrance. Its lagoon, however, has its peculiarity, being dotted with numerous islets formed of shells which have adhered one to another till the surface of the water has been reached. At the S.E. corner of the Atoll, there stand out prominently a number of pyramid looking structures of rock and cement, one in the middle towering over the rest.<sup>25</sup> These were raised to commemorate the first band of mission priests who landed on this lonely spot, the highest standing for their Leader.

Our approach at dawn was not noticed by any of the 200 inhabitants, whose homes were set back amongst the trees. All to be seen at the Landing Place was another stone pyramid, above which the Tricolor floated. Our siren brought the folk out with a run and we soon had a boat ashore with the mail, to return with the Chief and sundry others who kept the Supercargo busy. There being no occasion to delay, we steamed south.

---

Puka-ruha was reached before noon, but there was such a heavy swell that the usual landing place was impossible. A whaleboat was lowered, but we could do no more than draw near, when a couple of natives plunged into the surf and swam out to be carried to the steamer. This Atoll is rarely visited, its 130 inhabitants reported as still very primitive. It has a circumference of eleven miles, with a width of five and possesses an even finer beach of sand than Tatakoto. It does not lack for coconut trees. We had somehow to get those natives back. They told of a narrow pass round a point of land where

---

<sup>25</sup> Calvaire de Tatakoto:

the swell was less; we took them there in a whaleboat; they jumped at the right moment, landed safely, and we were off into the night.

---

Réao, a little larger than Pukaruha, is one of the most easterly of the Group. We arrived early, but the natives were up and out, there being a goodly number on the reef awaiting us. The Supercargo and his crew were soon ashore, returning well loaded with Réaoans eager to sample the trade room. They had not omitted to bring their own barter, from brooms and sleeping mats, sinnet rope and chickens, to a large assortment of Pipi pearls. Soon after, the Inspector and I got ashore.

There are 400 natives on Réao, 90 of whom are children. The main village lies in a perfect forest of palms, with the usual broad avenue down its centre leading to the lagoon a quarter of a mile away. The homes are of every description, all very native, slabs of coral for some walls, rocks and cement for others, packing cases for a few, pure leaf huts for many. A roughly built House of God, with School adjoining; the priest the Teacher, he the one white man, a genial soul, right glad for company, grey-bearded, robed, of course, in that cruel black cassock despite the heat.

The hours flew by, the boats were returning the natives from the Bretagne, all with some purchase or other, young girls carrying a sack of flour as if it were nothing, boys loaded down with rice. We, in turn, had now to go. It was here that I scored on the Inspector. You need to be very smart both in landing and launching; one moment it is all right; the next it is wholly wrong for you. You wait for the Bos'un's command, then jump at landing, or rush for the boat at launching. You are lucky if you are only wet to the knees; to hesitate is to be soaked. The Inspector was thinking of his dainty French socks and spotless white pants; I cared for neither. He was a wreck when we hauled him in. A good meal made all thing right; we were off once more, this time heading west.

---

Nuku-ta-vake and Vahi-tahi — alike as twins for shape and size, being ten miles round their circles and five miles across their miniature Inland Sea — lie only forty miles apart and are inhabited by the same 300 natives, who move bodily between them for copra making. It was a question on which of the two they were. The Captain took a chance on the former and reaching the Atoll by noon found it the wrong one. Heading for Vahitahi to make it before dark, we failed. We saw it just at sunset and by the time we were opposite the landing, all was dark. Lights glimmered, however, and a bonfire was soon going on the beach, which we answered with Catherine wheels produced by the Captain, no doubt much to the delight of those ashore. There was nothing for it but to tie the wheel and circle at a safe distance through the night.

That day we had passed what is a mere dot on some maps, on others not appearing at all — the Pinaki atoll, a six miles circuit, well known by many a hunter after buried Treasure and has the white man's name of "Hidden Treasure Island". Tradition tells of some pirates from the South American coast having buried their loot here and never returned, and expeditions have come hither in vain search, so far, both from Australia and Tahiti. These could find no caves in this reef, nor is there soil or sand thereon of any depth. It is likely that they sank their treasure in the lagoon, which, like all, has various depths. Six miles of water every way you turn is not of easy search. It may possibly be all a myth, as other such hoards would appear to be.<sup>26</sup>

---

<sup>26</sup> Some of the following information was taken from [Moon Tahiti, by David Stanley \(2011\)](#): "During the [War of the Pacific \(1879–1883\)](#), four Australian mercenaries stole 14 tons of gold from a church in Pisco, Peru. They buried most of the treasure on Pinaki or Raraka atolls in the Tuamotus before proceeding to Australia, where two were killed by

Morning broke with a strong breeze and a heavy swell, but the whaleboats did their work, the Bretagne on the move all the time, getting as near as one dared. Vahitahi is not a prolific copra producer, great stretches having not a tree upon them, especially on its western side. The natives one met ashore were friendly enough, but one could readily see that their contact with civilization has been slight.

---

Running past Tena-raro in the moonlight, we were off Maria with sunrise. The Captain decided to have a day off and show us an uninhabited Atoll, alive only every few years at Pearling Time. Fresh fish also would be a welcome change in our Menu and these we could obtain by spearing on the reef.

Cruising along till a likely spot for landing showed up, we put off in one of the whaleboats, the ladies coming along with us, with half a dozen sturdy natives at the sweeps, and rising on a comber were swept well up the coral flooring, springing out with water up to our waists to hold the boat from being drawn into the deep. Fish were darting everywhere and the crew were soon busy with their spears. We made for higher ground and took a stroll around.

Maria is small, its circumference under four miles, the lagoon the same distance across. Coconuts conspicuous by their absence, not a dozen waving heads could be seen the whole circle round, but pandanus in great plenty and much scrub, the walking hard as the coral was exceeding rough and there is but little sand. We came across the keel of a schooner high up on the reef. Years must have passed since it drove ashore. With no water on Maria, few nuts and ships but rarely in sight, a wrecked crew would be here in sorry plight.

A fiercely hot sun and little shade, we returned to the boat to find three sacks filled with fine fish, amongst them that gorgeous fellow, the Parrotfish of purest blue. Getting off that reef was not quite so easy as landing. We were just a fraction too late and a huge comber rose at us. There was nothing to do but to keep going; the oarsmen held us true; to swerve a foot would have been to overturn and be dashed against that cruel rock wall. We went clean through that comber, underneath its crown and the fish in the boat were largely in their element again. There was not a dry rag on any of us. We got aboard by using the rope ladder as the gangway was not feasible in the heavy swell.

The absence of seabirds throughout the Tuamotus is most marked; all the more welcome, therefore, were the number hovering over and around Maria: large coal black gulls with white heads, their wings shaped like scythes, and bands of the snow white tern, the size of plovers, which when ashore showed

---

aboriginals, and the other two were sentenced to 20 years imprisonment for murder. Just prior to his death the surviving mercenary told prospector Charles Howe the story. In 1913, Howe began a 13-year search which finally located part of the treasure on an island near Raraka. He reburied the chests and returned to Australia to organize an expedition which would remove the gold in secret. Before it could set out, however, Howe disappeared. But using Howe's treasure map, diver George Hamilton took over in 1934. Hamilton thought he found the cached gold in a pool, but was unable to extract it. After being attacked by a giant octopus and moray eel, Hamilton abandoned the search and the expedition dissolved.

"In 1994, a descendant of Hamilton chartered the *Sea Belle* out of Fakarava for the atoll of Tepoto which had been identified from an old photograph as being the place he was looking for. However, soon after his arrival on unsheltered Tepoto, the weather turned very nasty and it is only after a narrow escape from the menacing reef that the boat was able to head back, never to return. At about the same time, The Discovery Channel made preparations for an expedition to search for the treasure for a documentary. But after some last minute doubts, the project was scrapped.

"As far as is known, the US\$1.8 million in gold has never been found."

In April 2014, when the price of gold was about USD 1,300 per troy ounce, 14 tons of gold were worth 14 x 2000 lbs per ton x 16 oz per lb x 1300 = USD 582.4 million.

no fear of us, but hovered close over our heads as we moved about. In the scrub were most inquisitive brown linnet-sized birds. I was on the lookout for that noble fellow, the Frigate, with its gorgeous flame-coloured tail feathers, but there were none to be seen.

Maria, however, is not always left to the birds. Its lagoon has produced some of the finest pearls of all Tuamotuan hauls. When the Tahiti Government declares the ground open, then Maria is very much alive; divers and their families, traders and their stores, Jew and Chinese pearl merchants swarm in. There is a Government Official stationed at each Atoll whilst the Diving season is on. Not all Atolls are worked at the same time. Each pearling ground must have a two years' rest and all shells less than a prescribed size have to be returned, unopened, from whence they were drawn. The season is short, so Maria is mostly left to itself.

---

Now turning to head north for the port from which we started, <sup>27</sup> we had to work half way round the next Atoll — Tureia, on some maps named Papa-kena — till on the northwest side we saw the village with its flagpole and a tall wayside Cross close by. There are but sixty folk and they behind the times. Their dwellings are of leaf and thatch. In early days, the Tureians were noted for their hostility to strangers.

There is no possible entrance into the lagoon, which is six miles across, enclosed in an eight mile wall. They make but little copra as they need the nuts for themselves. Back of yet another fine broad beach of sand, the Church stands amid the palms, but with no resident priest. As there was a heavy swell, we made no attempt to land, but the Headman came aboard bringing more Pipi pearls for possible sale or barter, and the inevitable Chinese storekeeper appeared to replenish his stock. The natives who reached us in their canoes were a hungry-looking lot, and our cook I noticed was exceedingly generous.

---

A Sunday at sea and we were off Amanū. The main village lies on the west side and an Entrance exists of fair depth, but very narrow. The Bretagne is the largest Trader to make it, but the day was unpropitious; according to the Captain, there was too strong a wind for safe passage. A wreck piled up halfway through the Pass showed us there was danger. The Pilot soon arrived, a burly native, grey moustached — an uncommon sight — who confirmed the Captain's opinion. With him came the French Agent of a Tahiti Company which controls the copra output of this and other Atolls we were calling at, and as he wished to visit them through the means of our craft, this would necessitate a return to Amanū to drop him off. But Time seems of little account on these boats. His consort proved to be an appalling sailer; I pitied hers and her immensity.

Amanū is over forty miles in circumference, with a lagoon ten miles in width and here I saw a lagoon the opposite of placid. There are long stretches of the reef where nothing is to be seen and the wind finds no obstacle in its path. It was a fine run in the launch through that narrow entrance, then turning to the right, we found a little bay with breakwaters of coral, hand built. The reef edge gives thereby an excellent landing stage and several small schooners lay moored close by, used not only for the lagoon, but for reaching neighbouring islands, and even Tahiti at a pinch. The population is 250. The

---

<sup>27</sup> The map shown at the beginning of *The Tuamotu Islands I* indicates that WWB continued south, to the Gambier Islands, at this point in the cruise, rather than north. This paragraph concerns, no doubt, the continuation of his journey from the end of *The Gambier Islands II*.

village is straggling; avenues, however, run its length, parallel to one another. From the sea, not a dwelling can be seen; they are hidden in a grove of palms.

The houses are of all kinds, as also seem to be the creeds offered for choice. There is a Catholic Church, dated 1875, and I entered to find everything in perfect order, though no priest here. The fact is that some of these Atolls are served by one cleric who moves amongst them as the spirit moves him and opportunity of move occurs. But the Amanū Faithful are not unmindful. Outside the buildings there are hung two bells of goodly size. Morning and evening, I was told, they are rung, priest or no priest, and the Faithful fall to their beads. I entered the Protestant Church; it was empty of seats, but has a platform, a Table and a towering Pulpit. I met the Latter Day Saints missionary, a big American, a great talker. He seemed to me to be a case of wasted energy; he has missed his true vocation; as a pilot Heavenwards, I felt strongly doubtful of his ability. His stories of Atoll life, I have locked away. They were far from pleasant. I hope that he exaggerated. Three Creeds for 250 people!

I covered the village in short order; the longest stretch ends in a cemetery, where elaborate structures rise above several of the graves, beneath their roofs hang immensely long necklaces of tiny shells. The earlier cemetery still lies clearly evident in the centre of the village. Our arrival caused no special stir here. Most folk were lazing the hours away, grouped in the shade, with sufficient energy, however, from time to time to break open a handy coconut for its milk. I had heard of wells being on Amanū, but they are merely scooped out holes in the reef, out of reach of waves, wherein rain seeps, to be collected laboriously. Far more satisfactory are the few concrete tanks into which the rain drains from the iron and guttered house roofs. There must have been a larger population once, for there are almost as many foundations on which homes once rose as there are homes today.

One meets strange folk in out of the way places the world over, but I was hardly prepared to be approached by a specially fine specimen of Amanū's manhood, who in very passable English told me that he knew my native land well, that Piccadilly was as familiar a walk to him as his village's avenues, that Portsmouth and Plymouth, Glasgow and Belfast, were his stamping grounds. "There's no place like home," said he, "but England is a lovely land." Its villages seem to have greatly impressed him. I found that he had been what he called "a greaser" upon a British Cruiser, but the name was beyond me, though he tried hard to give it me and he could neither spell nor write. How he, an Amanūan, got into the British War Service, I had not time to unravel for the launch was eager to be off and — the tide now running out — we went with a rush through the Pass.

Marokaū is shaped like a Heart, its outline 36 miles and its lagoon nine miles across. It, like so many we had seen, has long spaces of bare reef, but what soil it possesses is thick with coconuts. It has an Entrance, but only for small schooners. Its 150 natives live much as the Amanūans, with whom they are in constant touch.

As I roamed around, my eyes fell upon a strange treasure trove. Upon Marokaū's reef lie the remains of a French man-of-war, wrecked decades ago. One of the brass blades from its propeller has been pried off and acts as a deep-toned gong to summon the island's Latter Day Saints to worship.

All day the Bretagne circled offshore whilst its boats were busy. At sunset we headed away to a second really live spot, according to the Captain.

## III

## Hao — Makemo — Takaroa — Fakarava

Hao is one of the larger Atolls. De Bougainville, first of white men to see it, in 1768, gave it the name of La Harpe from its resemblance in shape to that instrument. Its outline covers 75 miles; its lagoon's fullest width is twelve miles. It possesses a Pass for ships, but at the hour of our arrival, there was altogether too strong a current running out to make the attempt. The launch, however, with a whaleboat in tow, set off, and keeping close to one side stemmed the swift water successfully. On the opposite side lay a wrecked schooner; it had tried and failed.

The main settlement is at the village of Pura-tea, clear across the lagoon from the Pass. We sped across to find a coral pier built out to land on. A deputation of grave looking men, clad in white coats and blue overalls, awaited the Government Inspector, whose advent our siren alone could have given notice of, with whom we marched solemnly to the School House, where the children at once broke forth into the Marseillaise. The heat inside that building did not tempt me to linger for the proceedings. I went off for my own inspection.

There is great order in that village. Three broad and spotlessly clean Avenues run parallel with the lagoon front, the houses standing at regular intervals along each. Many of these homes are of modern construction, poor looking abodes conspicuous by their absence. Tanks for drinking water are numerous. There is a population of 300 and there would have been double that number but for the cyclone of 1906, which on Hao carried off into the deep 500 of its people. It took with it not only people. The Mormon Tabernacle was of stone; it was lifted bodily and deposited in the ocean. Folk at such time on an Atoll have but one chance, to climb the coconut trees; they may hold beneath the terrific strain.

Hao has, like Fakahina, a Co-operative Society of their own and are ousting the Chinese storekeeper from their midst. As I roamed around, I met two young men, spotlessly groomed and attired. I took them at first to be Englishmen on a yachting cruise round the world. They seemed utterly out of place in this native village. I had seen a dozen small trading schooners lying by the pier, but no yacht. They turned out to be Mormon Missionaries, who always travel and work in pairs. One has been on Hao for 18 months, the other but one, taking the place of another who had served his term. They had three years to put in before they would see Utah again. During the afternoon, the Bretagne headed for the Pass and, making it, steamed across to us, dropping anchor in a millpond.

At daybreak, we prepared for an invasion. It came in boatloads and overran the ship all day. No part seemed Taboo to them, but Trade was good. We got rid of them at last and made for that Pass, went through at a great pace, with none too much room to spare, and headed back to Amanū, but twenty miles away, where we landed the Agent and his wrecked and wretched mate; then running past Taū-éré and between Ma-ru-téa and Ni-he-ru, met squally weather, delaying us, so that we failed to reach our desired haven in daylight. The usual practice followed; we tied the wheel and circled all night, well offshore.

---

There are two Entrances into Mak-emo's lagoon, an Atoll of no mean size, being 96 miles around and a dozen miles wide. We took that on the north, none too broad for us and after making through, had to steer clear of several inner reefs, finally dropping anchor off the main village. We had mail to

deliver here. Few of the 200 natives were at home and their homes were, on a nearer view, of a poor class. This lagoon is noted for its voracious sharks, whilst the pearl shell is not of high quality. By early afternoon all business had been completed and we passed out to sea again, heading for the most northerly of the Group.

---

Passing the uninhabited Tik-ei, and Taka-poto, we brought to off Taka-roa in the dark. The launch took us ashore at the main village, Te-ava-roa, which lies along the Pass, but impossible for an 800 tons vessel and there was nothing for it but again to make rings till daylight, when the Bretagne would steam slowly up and down offshore to receive and discharge cargo. We had returned aboard, leaving inspection for the morrow.

Takaora is no out of the way Atoll. Much shipping touches here; it is also the last port of call for the Marquesas. It has a circuit of 34 miles and its lagoon is six miles broad.

Off again in the morning, we made for the Pass, where, on the side where the village stands, the folk have built a stone quay against which one makes fast, it lying in a back wash of the Entrance and so out of the full force of the current. Many schooners were tied up and there were more to be seen far out in the lagoon, for it was the Pearling Season for this Atoll. The village rises on a stretch of the reef which nature has provided with abundant soil. Its size is not great, 500 yards along the reef and 400 yards or so across. Each end is cut off by the sea, where the reef turns sharply, thus forming a little island. I saw no more pleasing village in the Tuamotus. Its broad avenues have coping stones throughout their length and are lined on each side by young coconut palms whose fronds wave only little above one's head, giving abundant shade. There are numerous neat bungalows, many of them fenced in, while lamp posts are frequent along the way, with a most elaborate arrangement for holding the kerosene light. Special pits have been blasted in the coral and soil placed, where papaya, bananas and breadfruit thrive, whilst many an imported bush and flower flourish in this neatly ordered spot.

The red roof of the Mormon tabernacle is a prominent feature from the sea. Takaroa is a stronghold of that persuasion. It and the Latter Day Saints must not be confused. I doubt if they are speaking terms. Each have their separate Headquarters at Papeete. A large signboard on the Saints' Meeting House there proclaims them as "the Reorganized Church of Jesus Christ of Latter Day Saints".<sup>28</sup> The Mormons hunt, as Hao shows, in couples; the Saints scent their prey alone, so far as I have seen. I would see that Tabernacle, but ran first across the Catholic Church; it was locked and the windows were boarded up; the Mormon seems to have ousted the Roman.

The Mormon edifice is on the main highway and along side of it is their Social Hall. Though early, the huge doors of the Tabernacle were open and I entered to hear the strains of music from an harmonium played by a native girl. She stopped, then — no little to my surprise — broke forth into my own National Anthem, whilst I, of course, stood at Attention. Strange indeed that she, a pure Tahitian, in an American entourage, and in a French Colony, should be at home with a British Anthem and even stranger that she was there, all ready for the occasion. But gossip travels fast in so small a community and doubtless an Englishman aboard the Bretagne was known by everyone. It was very pleasing. I found out later in the day that she is but one of four young organ players of Takaroa, and all day long that harmonium was busy; those girls were indefatigable. The building is no flimsy structure. It has withstood the two cyclones of 1903 and 1906, when all else in the village went down

---

<sup>28</sup> The [Community of Christ](#) was known as the Reorganized Church of Jesus Christ of Latter Day Saints (RLDS) from 1872 to 2001.

before the wind and sea. Its tower holds a bell: one could wish of better tone than it gave forth when pulled for my benefit by a mischievous boy. The main feature of their worship being Preaching, the Pulpit is a most elaborate affair, a sort of old time "Three decker", with a back rising halfway to the roof.

The Social Hall, with its wall and ceiling stencilled in blue, has drop curtains at one end, but no stage. The two young Mormons who were to be seen about the place evidently believe in keeping their flock cheerful, and this indeed would seem to be their Creed's special forte and use in French Oceania, where they have been at work since the late '40s. These two were as dapper as those on Hao. So is it in Papeete; one would take them for twins, often the same height, the same build, certainly the same clothing, perhaps white, perhaps khaki; the same ties, hats and ribbons; never seen apart, they attend even the barber together. Every other young man — and they are all in their twenties except their Superintendent in Papeete, always a married man with family; these also changed periodically — has his sweetheart, but never so with them; they are worthy of praise even if their creed is weird.

The village cemetery adjoins. One dated headstone carries memory back to the days of these Atolls' almost first contact with white man. It was a Chief who was buried here in 1839. He could well have heard of, even seen, Wallis and Cook, de Bougainville and Bellinghausen. Another tells a different story. He was but thirty years of age. The proud word "Poilu"<sup>29</sup> is cut into the headstone. He came back from the Great War, a wreck, to die on his Atoll home.

There was evidence on every hand that the pearling season was on, not only the many crafts but the many buyers waiting for their prey, whilst great quantities of "Tahiti black shell" were being constantly unloaded. Takaroans have the reputation of being the best divers of all the Tuamotus; their services are sought far beyond their own lagoon. But it is a hard life. Diving suits have been introduced, but they do not at all appeal to the natives. The object, of course, for their use is to reach a greater depth and to gather at each hand a greater supply of shell than suspended breathing will permit.

Pearls are not the main object, though usually thought to be. It is the shell that is sought, and that is plentiful enough. Pearls are the extra, and fine pearls the exception. Though tropic heat seemingly would assure warm waters, it is not so; the wind has to be remembered. Some divers complain that April is too early to commence operations; they get chilled to the bone. The season runs on till October, which is warmer, but by then stormy weather is a drawback. The work is done from schooner or canoe, the hours from 8 a.m. to sunset. The depth reached is, for the stronger men, 20 fathoms (120 feet), and they remain under within a few seconds of two minutes. They dive with one hand upon a line to which a net and a weight are attached. Arriving below, they gather all shell above a certain size within reach, then rise, attendants hauling in the line. The diver usually lights a cigarette and rests, the others open the shells and with a sharp eye for possible value within, cast back the living organism into the sea. Men past fifty years of age are not usually seen amongst the divers, nor do these attempt the lowest depth.

But now I had to leave the pearlers, for the launch awaited me, and, soon after, the Bretagne pointed south. My last memory of Takaroa is a 3000 tons steel-masted brig lying sheer on the reef a couple of miles from the village, her masts still bidding defiance to the elements. The 1906 cyclone cast her there. The next may lift her, carry her bodily across the reef and drop her in the lagoon.

---

<sup>29</sup> The French word for *hairy*.

As the sun rose, I awoke upon my hatchway to find us close to Faka-rava, first seen of white men by Bellinghausen in 1814. In shape it is another erratic parallelogram, its circumference a little over 100 miles, its inland waters 12 miles across, the second largest Atoll of the group. It has two Entrances, the main one being on the northwestern side, for which we were making. A lighthouse gives the site of the main village, which lies entirely out of sight on the inner side of the reef, at this spot a quarter of a mile wide. But we had a long way to go to reach it. We ran miles past the hidden village in a perfectly calm ocean, the breakers scarcely visible, a mere lapping against the edge of the reef wall, till a break appeared, a wide space, making it the finest pass in the Tuamotus. We headed in. Far as the eye could see, this great Atoll covered itself with a mass of foliage.

An hour's steaming brought us back to where the lighthouse stood and we dropped anchor a few hundred yards offshore, opposite where a Flag post flew the Tricolor. Here lies Roto-ava, the recognized seat of Government, under Tahiti's Governor, for over 50 of the 80 Atolls, the balance being under Mangareva. But the Administrator, a civilian, has, for personal reasons, been allowed to reside on Apa-taki, not far away, and his comfortable quarters on Fakarava are in use for another purpose.

The Tahiti Governor, a few years back, thought to take selected boys from the Tuamotus and bearing them off to Papeete, pass them through its schools, returning them as Teachers to their Atoll homes. But it was found that the attractions of the little capital were too great. The pupils refused to return; all the labour was in vain. In '27, therefore, he turned Fakarava's Government House into a Boarding School, with a Technical School attached, and we found 17 boys from 9 to 13 years of age under training. We added three more whom we had picked up at Fakahina. They have all been carefully chosen and this time the object may be obtained. Papeete's lure will be unfelt. The 20 are a bright looking lot, were carefully groomed, and full of life both at work and play. They were being taught by a half-caste woman, their Manual Instructor a Frenchman who expects to turn out both carpenters, architects and mechanics. Taking a look at the dormitories, they were both airy and models of neatness.

On that 100 mile circuit, there are but 200 folk in two villages separated by the full length of the lagoon. R. L. Stevenson <sup>30</sup> noted in his account of Fakarava the poverty of the soil. There must have been a great change since his day. There is plenty of "miki", useless brush, still, but huge stately trees abound besides the coconut wherever you cast your eyes, and Rotoava itself lies in a veritable bower. It has but one avenue running parallel with the lagoon, no homes of any pretensions for the natives, but withal quite a few well-built bungalows for higher grade Fakaravans. The Catholic Church was

---

<sup>30</sup> [Robert Louis Balfour Stevenson \(1850–1894\)](#) arrived at Fakarava on the *Casco* on 9 September 1888.

open, but the peripatetic pastor was absent. The village has a Protestant Preaching House for variety, also a couple of Chinese stores.<sup>31</sup>

I made my way to the Lighthouse, which I found to be of quite recent date, 1922. It is three-tiered, its front base curved neatly into a broad lounge where Rotoavans can sit at Eventide and gaze out to sea. The summit is reached by a ladder and is railed in — hardly for safety, for natives think nothing of the danger of Height — probably to have it *à la mode*.<sup>32</sup>

The crew were busy for hours, carrying freshwater aboard from a huge cistern ashore, others wood hunting, for our supply of both had run extremely low. One, the most willing of the lot the whole trip through, who carried those great sacks as if they were a joke, as I had so often watched him, had collapsed some few days before. He had overtaxed even his great strength; hemorrhages laid him low and he was dying. He preferred shore to further travel, and having friends on Fakarava, he was given to their care. The ladies on their part were not idlers; they gave a Party to their future teachers, who came with their Mistress for cake and candy and the run of the ship.

They gone, we upped anchor and made for the Pass, which with the tide running out, we fairly hurtled through, in the pitchy dark, for the open sea. Our cruise amid those “Atolls of the Sun” was over.

<sup>31</sup> The photographs below of the Catholic church on Fakarava and the lighthouses were taken in November 2014.

<sup>32</sup> The lighthouse in the photograph on the left — called *l'ancien phare* by the locals — is located behind Rotoava, while the other — the Topaka Lighthouse — is located further away, in the direction of the northwest pass.

Papeete's mountainous background looked very good to me when, a few days later, we tied up at the Wharf.

---

My young friend's wounds were healing, but his mental condition was worse. He had become possessed with the idea that he was responsible to his Firm for the success or otherwise of the Bretagne's cruise, and financially, it was probably not much of the former, for competition had been too active; too many cupboards — I ween<sup>33</sup> — found bare which we had sought to open.

The Firm's Manager was due by the next mail boat from San Francisco to discuss the run and future plans. He and my young friend were to return on the up mail boat three days later. He told me that he dreaded the meeting with the Manager, that he had done his best, but that everything had been against him. This hallucination I combated with all my power, but he remained unconvinced.

On arriving back, he took a cottage by himself a little out of town, coming to restaurants for his meals. A little later he took a room in town in a half-caste woman's home, and I kept in closer touch with him.

One evening I called and we went off for a stroll in the moonlight. Again he spoke of his dread and the displeasure of his Firm for his lack of real success. Once again I pointed out that he and I were alike but passengers aboard. On parting, he promised me that he would not leave Papeete, now only five days off, without a Farewell. That was Thursday and the Manager was to land on Saturday. The mail boat would head for Frisco on the Tuesday's dawn.

On Friday, he left his room, saying that he would take a walk through the lovely back avenues of Papeete. As he walked, the brainstorm must have gathered darkly. He carried with him the only means of escape; he had lost hope, so drew the weapon and aiming at his heart, just missed it. Folk hurried to him and rushed him to the hospital. At sunset, he died.

On Saturday, we buried his body at Pa-Uranie, God's Acre at Papeete.<sup>34</sup>

---

<sup>33</sup> Archaic: to think; suppose.

<sup>34</sup> A photograph of the grave of Wesley S. Gardiner can be seen in a footnote to *Pauranie*, in Part XIV, *Tahitian Vignettes*.

## SOUTH SEA CURIOS

### Gathered from many quarters

#### 1. Tin-Can Island <sup>35</sup>

Niūa-fooū lies on the monthly mail steamer route between Fiji and Samoa. Landing is a difficult matter at all times, oft impossible. When only in-and-out Mail has to be considered, a unique method is employed. One or more natives swim out to the ship, with the mail either wrapped in oil paper or within a sealed kerosene tin, the former tied to the end of a stick some three feet in length so as to keep it so far as possible above the waves. The inward mail is enclosed in a similar fashion and lowered to the postman below, who takes chances on the sharks hanging about. Hence the name, though not appearing on Admiralty Charts.

#### 2. How a Doorstopper Led to a Fortune <sup>36</sup>

In 1900, phosphate was scarce in the Western Pacific. Island after island had been worked out. Those engaged in the trade were greatly worried. The Pacific Phosphate Company of Sydney, while not losing hope of finding other islands with their valuable guano deposit, took to trading in copra to tide over the lean years. They had a station on the then German-owned island of Naūrū in the Marshall Group. <sup>37</sup> From thence, just prior to 1900, the Supercargo of one of the Company's schooners was attracted by a rather strange looking piece of rock on the island, picked it up and brought it to Sydney with him. It was considered there to be a lump of petrified wood, of no use save to keep open the door of the Company's analytical laboratory.

The manager of one of the Company's far off islands was just then transferred to the main office — his name Albert F. Ellis. <sup>38</sup> He noticed the doorstopper and thought it much resembled a small deposit of phosphate which had been found some years back on one of the islets of the Phoenix Group. Mentioning the fact to the Company's Manager, he was told that geologists had looked at it and pronounced it to be wood. For some weeks he let the matter rest, but he was never at work in the

<sup>35</sup> See also Tale #31, *Of South Sea Curios* (2), in Part IV, *Tales of a Roaming Grandfather*.

<sup>36</sup> See also Tale #31, *Of South Sea Curios* (2), in Part IV, *Tales of a Roaming Grandfather*.

<sup>37</sup> [Nauru](#) was annexed by Germany in 1888 and incorporated into Germany's Marshall Islands Protectorate.

<sup>38</sup> [Albert Fuller Ellis \(1869–1951\)](#). The piece of rock that led to the discovery of phosphate on Nauru and Ocean Island:

laboratory without being attracted to the lump. Finally, he decided to test it on his own account. Knocking off a chip, he ground it and found it to be phosphate of the highest grade.

That doorstopper brought £3,500,000 to the Company, leading as it did to deposits calculated at a minimum of 100 million tons, now owned in a combine by the British, the Australian and the New Zealand Governments, and laid bare not only the treasure stored on Naūrū, but upon Ocean Island, 160 miles away in a direct line, also included in the Agreement.<sup>39</sup>

### 3. Filipino Theologians

There are some 8 million adherents of the Roman Catholic Creed in the Philippines. The priesthood has been at work there since 1570. But a change has come over the scene since the opening of this century. Education and Travel seem to have caused the natives to think for themselves and refuse to take so much with a blind faith. The Independent Church<sup>40</sup> proclaims that Modern Science is superior to Tradition, denies the possibility of miracles, conceives the Supreme Being as an Essence and a single Personality, not a Trinity, and has the modest number of 4 million adherents. That seems fast going.

### 4. Nomenclature<sup>41</sup>

All likely have heard of Christmas and of Easter Islands, but not all perhaps of the Third Person of the Christian's Trinity. It is smothered under a Spanish form and gave name to the northernmost island of the New Hebrides, "Espiritu Santo". What seemed wholly incongruous and unseemly to me was to be dwelling for a season thereon at a lovely spot called "Hog Harbor".<sup>42</sup>

The days of the week have not entirely escaped. There is Sunday Island in the Kermadecs, 600 miles east of New Zealand, not inviting to me as a residence, though several attempts have been made.<sup>43</sup> And clear across the South Sea, one finds in Torres Straits, which separates New Guinea from Australia, a bunch of islands — Tuesday, Wednesday, Thursday and Friday — all within a day's sail of one another, and doubtless, as with Sunday, named from the day when first seen by white men. Thursday, which most appealed to me, takes rightly precedence of the rest, being a pearling station of renown, a cosmopolitan place, with a Cathedral, a hospital, a garrison, and electric light. It is but 800 acres in size.

---

<sup>39</sup> A detailed account of this story can be found [here](#). The rock was brought back from Nauru in 1896 and tested for phosphate in Sydney in 1899.

<sup>40</sup> The [Philippine Independent Church](#) is an independent Christian denomination in the form of a national church in the Philippines. Its schism from the Catholic Church was proclaimed in 1902 due to the alleged mistreatment of Filipinos by Spanish priests.

<sup>41</sup> See also Tale #7, *Of Nomenclature (I)*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>42</sup> See also *Of Hogs* in Part XI, *Roaming the Pacific Waters*.

<sup>43</sup> See also *The Lonely Isles : the Kermadecs* in Part XI, *Roaming the Pacific Waters*.

## 5. Ci Gît <sup>44</sup>

Monuments to noted men — I know of none to women, though many richly deserve it — lie scattered over the islands of the South Sea. The latest known to me has been raised upon the tiny sickle-shaped island of Haapai (Lifuka), which lies between Nuku-alofa and beautiful Vavau in the Tongan Group. The isle can be crossed in a ten minute walk, though its length runs to three miles and more. Here a man, a Londoner by birth, who had played an extraordinary part in Tongan life, breathed his last after long exile, discredited but still defiant. A towering statue in Victorian garb, rising eight feet above its base, will keep alive to Tongans the memory of the one time missionary, Founder of a schismatic Church, Politician, Financier, Statesman, and Prime Minister to King George Tūboū I.

The Rev. Shirley Baker <sup>45</sup> was a Wesleyan sent out in 1860 to help Christianize Tonga, but he could not keep his hands off temporal affairs. He was able, aggressive, of rugged strength, dogged determination and of forceful personality. His Monument <sup>46</sup> stands as a witness to the undying love of a daughter, who not only wrote a defence of her father for publication <sup>47</sup> and through it helped to raise the necessary funds, but as a girl, threw herself between a would-be assassin and her parent, herself receiving the shot.

<sup>44</sup> French: *here lies*, used preceding a name on a tombstone.

<sup>45</sup> [Shirley Waldemar Baker \(1836–1903\)](#). See also *The Coming of Xianity* and *Haapai* in Part XI, *Roaming the Pacific Waters*.

<sup>46</sup> Reverend Shirley Baker Monument, Pangai Cemetery, Lifuka, Ha'apai, Kingdom of Tonga:

<sup>47</sup> See [Memoirs of the Rev. Dr. Shirley Waldemar Baker, D.M., LL.D., Missionary and Prime Minister](#), by Beatrice Shirley Baker (1927).

## 6. The Duk-Duks

Nothing at all to do with ornithology. It is a leading and most pernicious secret society among the amiable natives who inhabit New Guinea. <sup>48</sup> Being secret, it is not easy to report on, but its power was so great that even the Prussians could not tame it, and only so far succeeded as to prevent meetings save at stated times in the year. It has now gone largely underground, but still retains an influence among the uncivilized and hold terror over the uninitiated. It has a fine field where spirits are believed in, where wells and trails, rivers and trees have each their demon and all must be placated.

## 7. An Erratic Isle <sup>49</sup>

It would not do to homestead on Falcon Island. <sup>50</sup> It has a nasty habit of disappearing. The Spaniard Mañuella and the Frenchman Laperouse, in the 1780s, noted then a mere reef. In 1865, H.M.S. Falcon saw it as such and named it. That same year, however, smoke was seen issuing from it. In 1885, it was an island over a mile long and 150 feet high. Gradually it subsided, and by 1894, it was but a reef again. In 1896, up it came again, an island of pumice stone, 100 feet high. By 1900, it had again disappeared. In 1927, it appeared once more, a little longer than before and 350 feet high. The Tongan Government had already once annexed it, but proceeded to do so again and, landing, planted their Flag. Up to present writing, the island still remains, but the western end is clearly disappearing, whilst new land some four miles in length is rising at the eastern end. A submarine volcano would seem to be the cause, for in those same waters, but leagues away, we steamed through acres of pumice stone, and dropping a bucket into the sea, brought up water well fit for a comfortable shave.

## 8. Marriage Settlements <sup>51</sup>

The Trobriand Group, off Papua, are of coral formation, yet boast of vegetable gardens second to none. Girls here are in luck from birth, their quick demise not sought as in other wild spots. The reason for their luck is the Yam. Every girl infant has a garden area from her birth, tended assiduously by her father and brothers who manage to produce yams of the finest quality from pockets formed by nature in the coral bed and filled by man with soil. A girl, therefore, on reaching a marriageable age, finds herself endowed with valuable garden lands. Upon her marriage, her people still continue to work the ground for her, keeping her food house full to overflowing. Happy husband with such a marriage settlement! True only in part, for he is forever busy elsewhere; he has sisters of his own and must needs attend to their acres of garden. Anyway, all the men are kept busy and the young ladies of the land have ample time to put on airs as heiresses, full worthy to be won.

## 9. Deer Hunting

Deer are not among the indigenous Fauna of the South Sea. In but a few islands could they exist. Yet in New Caledonia, they overrun the land, a pest brought thither by the white man. Innumerable herds roam wild over the island, descending from the mountains to the arable lands and playing havoc with men's labour. Had I had the heart, I could have taken advantage of a kindly French Government, which stands ready to supply ammunition free to those who will be good enough to go deer hunting. But my days of taking life of bird or beast are over. My own hourglass is fast running too low. The deer are of the Sumatra kind, the heads not remarkable, the best not running beyond six points. Their flesh is good and palatable. I saw one large cannery wholly employed with deer meat. The residents organize deer Drives, as Australians with their rabbit pest, but here they use machine guns at the end. It is man's own fault. <sup>52</sup>

## 10. A One-Man Island <sup>53</sup>

But not a Robinson Crusoe kind at all. In the Cook Group, but far away from the main islands, lies Palmerston, its extent one square mile. The Atoll was uninhabited when in 1862, William Marsters, a ship's cooper, appeared on the scene with three native wives and bairns. These bairns, growing up, took to themselves wives or husbands, as the case might be, from other islands handy, and as native men have no surname, they all came under the one name of the Autocrat Marsters. There are now about one hundred descendants, but not another name is found, their language a weird English.

And nigh the same is Yorke Island, lying in the Torres Straits. Here "Yankee Ned", an American sailor and a negro, deserting his man-of-war, settled down, amassed a fortune in pearls, had eight native wives, lived to nearly ninety years of age and left a huge progeny of descendants, the majority of the present day inhabitants, but without surname to distinguish them from the rest. They are simply "Yankee Neds".

## 11. The Last of the South Sea Sovereigns

Queen Makea of the Cook Islands, Cakobau of Fiji, Kamehameha of Hawaii have passed away, their Sovereignty absorbed by the Great Powers, so also with Queen Pomare of Tahiti, but Salote still remains, Queen of Tonga, the descendant of Royalty traced back one thousand years, and a Queen she is. Born in 1900, the only child of King George Tubou II, and educated at a noted Girls' School in Auckland, New Zealand, she ascended her Throne when but eighteen years of age, having the previous year married her cousin and the next in line of succession — an act of sound diplomacy, apart from love — and the Prince Consort Tugi became also her Prime Minister a few years later. Of commanding height and robust build, with a will of her own and yet a gracious personality, she rules today over a united people, safe from all aggression under a British Protectorate. Her capital is Nukualofa, where her Palace and Private Chapel stand, close to the beach, but ensconced in noble shady trees. To her, all Tongans pay high tribute and we outsiders who know her worth join heartily therein, nor hesitate to unite in loyal and dutiful acclaim, “Long live Salote, Queen of Tonga.”<sup>54</sup>

## 12. The Curfew Bell<sup>55</sup>

There are islands in the South Sea too numerous to mention where late hours are taboo. The warning is usually the native drum, a hollowed half trunk, the sound from which carries an extraordinary distance, but a conch shell serves as well. Starting the Curfew warning in the main village, the next village, miles away, picks up the sound and passes it on to its neighbour. Astonishingly quickly the word rings round the island, “Lights out and everybody to his mat.” Then quiet reigns till sunrise. I found myself ever ready to obey.

## 13. True to Type

I knew him not, but heard much of him. He died in 1913. In the little cemetery at Kavieng, a port of New Ireland, lies Bulowinski, the German Administrator before the Great War and the Mandate System. He is still vividly remembered by the older natives, who speak of him with awe as “Big, strong feller Bulowinski”. Although a typical Prussian Junker, hard, arrogant, fierce and even cruel, he was yet one of the finest colonizers Imperial Germany ever sent into the South Sea. He had vision, tremendous energy and a ruthless determination to get things done. The magnificent road he built along the coast of New Ireland — Neu Mecklenburg in his day — 150 miles long, with forced labour, is still the finest engineering feat in New Guinea Territory. In his Prussian way, he was a just man and though the natives feared him, he also held their profound respect.

His magnificent house, overlooking the roadstead at Kavieng, is another monument of his reign. The spreading grounds, planted with beautiful shrubs and shade trees, are counterparts of his home. A good half-mile of the residential hill was his garden, and about the house stand like sentinels on duty the towering, stately King Palms. He was thrown from his horse early in 1913 and died from

<sup>54</sup> [Makea Takau Ariki \(1839–1911\)](#). [Ratu Seru Epenisa Cakobau \(1815–1883\)](#). [Kamehameha V \(1830–1872\)](#). [Pōmare IV \(1813–1877\)](#). [Sālote Mafīle‘o Pilolevu Tupou III \(1900–1965\)](#). [George Tupou II \(1874–1918\)](#).

<sup>55</sup> See also Tale #26, *Of South Sea Curios (I)*, in Part IV, *Tales of a Roaming Grandfather*.

concussion in April of that year. His body lies under a huge Cross of concrete, his name sunk in molten brass.

## 14. Of Birds

On Niūafoou, “Tin Can Island”, there dwells the “Malau” bird, a pigeon of good size, but surely unique amongst its species. It is remarkable for two things, the abnormal size of its egg — by actual measurement, three inches in length — and its total indifference to motherhood. The hen burrows a hole in the side of the cliff wherein it deposits, day by day, an egg for an octave, scratching away the covering it made the previous day, and having finally well covered the lot, it departs nor dreams of “setting”, leaving the sun’s heat to do her work. The Incubator faithfully doing its part, the squabs, from the moment of breaking their shells, have to fend for themselves, with the aid of the male bird, the mother is off on her own pleasure, her ‘chicks’ no concern of hers.<sup>56</sup>

On Naūrū and Ocean Islands, of phosphate renown, the Frigate Bird, that highway robber of the sea, has been tamed for the use of man as a plaything. As he is inveterately lazy, it suits him admirably not to have to hold up his fellows on the wing, but instead to have nice portions of raw fish brought to him by Man as he sits on his perch on the beach. He is perfectly free and occasionally takes a little exercise, but leave? Not he. His native master and he are real good friends.<sup>57</sup>

## 15. Stone Masonry

Clear across the South Sea — in a slanting direction, from Easter Island 2000 miles off the coast of Chile to the Ladrões<sup>58</sup> 1500 miles off China, steadily working northwest — are remains imperishable in stone of a past and vanished Race. They crop up at intervals, huge gaps between. To read of them is to wonder, and to see them is to be amazed.

On Easter Island are stone Terraces, great slabs, fitted together without mortar, rising as high as fourteen feet. Upon these Terraces stood giant stone Statues representing the upper half of the human body, many of which are now in the Museums of the white folk, the rest have fallen and lie scattered. There is one, still, in the quarry whence all came. It is 68 feet high, in pattern like all the rest, weird, exaggerated and grotesque. Here seemingly was a Valhalla of the Illustrious Dead of a long past Day.

Now we skip to Malden, where lie the ruins of the stone temples with squared slabs of coral as altars, now fallen, in their midst. These temples were raised on platforms, bounded by other like slabs and filled in with crushed coral and stones.<sup>59</sup>

Next to Tonga, where, near Kologa on Nukualofa, there is to be seen that huge Trilithon, the Haamunga, two enormous upright blocks of stone set like the jambs of a doorway, with another huge

<sup>56</sup> See also Tale #26, *Of South Sea Curios (1)*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>57</sup> See also Tale #31, *Of South Sea Curios (2)*, in Part IV, *Tales of a Roaming Grandfather*.

<sup>58</sup> *The Islands of Thieves*, now Guam and the Northern Mariana Islands.

<sup>59</sup> In 1924, the prehistoric ruins on [Malden Island](#), in the Line Islands of Kiribati, were examined by an archaeologist from the Bishop Museum in Honolulu, [Kenneth Emory](#), who concluded that they were the creation of a small Polynesian population which had resided there for perhaps several generations some centuries earlier.

block laid across the top, carefully morticed into the uprights, the whole forming an arch 17 feet high. No such stone is to be found on Tonga; the nearest is on an island 100 miles away. No canoe ever made could carry such titanic load as one of these huge stones.<sup>60</sup>

Now a long skip to above the Line and we are in the Carolines, upon Ponape and Lelu, the latter a tiny isle of Kusaie.<sup>61</sup> Here are the remains of stonemasonry, enormous in quantity, walls, roads, terraces, canals all of solid blocks or slabs of stone.

Not far off on Ti-ni-an in the Ladrões are other lost signs of a race of mighty builders, with similar work on the neighbouring islands of Rota, Saipan and well-known Guam. Here are seen a double row of squared pillars, 12 in all, spaced carefully 12 feet from centre to centre, each 5 feet wide at the base and 15 feet high, with squared tops upon which stand hemispheres of stone 6 feet in diameter, with the flat side, not the conical, uppermost.<sup>62</sup>

Experts differ, so humble folk may have their modest say. To me, it seems inevitable that these great works once were worked and stood upon a low lying, now sunken, Continent. Low lying, for surely no sane men would raise these things on the tops of mountains. The Continent around them sank, they alone escaping for later ages to look upon and marvel. They form the supreme Mystery of the Pacific Ocean.

---

<sup>61</sup> Now [Kosrae](#), in the Federated States of Micronesia.

<sup>62</sup> [House of Taga](#) is located near San Jose Village, on the island of Tinian, United States Commonwealth of the Northern Mariana Islands.

**PITCAIRN'S ISLAND, 1767–1863 : A SKETCH****Chronology**

1767	The Island first seen.	
1790	The Mutineers land.	28 in number
1800	Adams alone.	33 in number
1808	The <i>Topaz</i> called.	35 inhabitants
1814	The <i>Briton</i> and the <i>Tagus</i> called.	40 inhabitants
1823	Buffet and Evans join the Community.	
1825	The <i>Blossom</i> called.	61 inhabitants
1828	Nobbs joins the Community.	
1829	Adams died.	
1830	The <i>Seringapatane</i> called.	81 inhabitants
1831	Removal to Tahiti.	87 inhabitants
"	Return from Tahiti.	65 inhabitants
1832	“Lord” Hill joins the Community.	
1837	“Lord” Hill removed by HMS Imogene.	
1838	Pitcairn becomes a British Dependency.	102 inhabitants
1851	Pitcairn Island Fund raised at Home.	
1852	Nobbs goes Home for Ordination.	
1853	Nobbs returns.	
1855	Vote to remove to Norfolk Island.	187 inhabitants
1856	The <i>Morayshire</i> removes the islanders.	194 inhabitants
1858	Return to Pitcairn of first contingent.	16 inhabitants
1863	Return of 27 as second contingent.	43 inhabitants
1932	Present day population:	174.

**Pitcairn — haven of the mutineers, home of their descendants. This island, two miles long and a mile wide, juts out of the South Seas, luring the few ships along its path with its murderous past and its mild present. This picture was taken by a sailor on Andrew Mellon's *Vagabondia* when the capitalist visited Pitcairn in March, 1935.**

## I

The Discovery — The Mutiny — The Nine — The Refuge —  
The Slaughter — Isolation ends

Rising ruggedly above the Pacific waters, a mere speck of land mid a long stretch of lonely sea, lies Pitcairn's Island, a mile and a half in width by two and a quarter miles long, after Sydney and Norfolk Island, the oldest Settlement in the Southern Hemisphere. It was Captain Carteret <sup>63</sup> in H.M.S. *Swallow* who, on July 2, 1767, first of white men mapped it on the chart. Magellan <sup>64</sup> had passed far to the north two centuries before, so later had Mendana <sup>65</sup> and Quiros. <sup>66</sup> The midshipman Pitcairn was the one aboard to first sight it and to him, son of Major Pitcairn of the Marines, lost at sea in the *Aurora*, was given the lasting credit by his Commmander. <sup>67</sup> It was not easy of approach. They saw a coastline precipitous, lined with high points — the highest, 1,109 feet, as later found — abundant vegetation, with no sign of life thereon. It may well have been left alone, but for an happening a thousand miles away, a mutiny on the High Seas.

---

In 1789, twenty-two years later, there headed for the isle another armed vessel, the *Bounty* of 215 tons, without Commander and but the skeleton of a crew. No flag flying proclaiming boldly its nationality, but the rather a fugitive from all its kind, seeking to hide from a Justice that its crew knew full well would reach out after it, nor rest till it found its quarry. Lieutenant Bligh <sup>68</sup> had been commissioned to sail to Tahiti, there to secure plants of Breadfruit, which Captain Cook, with Bligh aboard, had reported upon after his voyages in the South Sea, and bear them off to the West Indies as food for those natives. He left England Dec<sup>r</sup> 29, 1787. The stay upon Tahiti, which was reached in October 1788, had been a pleasant one for the crew, who left it, with regret, the first week in April 1789.

<sup>66</sup> [Pedro Fernandes de Queirós \(1565–1614\)](#)

<sup>67</sup> Robert Pitcairn (1752–1770) was a son of British Marine Major [John Pitcairn \(1722–1775\)](#). Two and a half years after sighting Pitcairn, Robert was lost at sea on the *Aurora*, at the age of seventeen; his father was killed at the Battle of Bunker Hill in the American Revolution.

<sup>68</sup> [William Bligh \(1754–1817\)](#)

Full three weeks later, heading west, returning on the course they had come — not round the tempestuous Cape Horn — 25 of the crew, with the 24 years old Acting Lieutenant Fletcher Christian at their head — broke out in mutiny. They not only had had enough of their martinet and tyrannical Commander, but, to some at least, as the sequel shows, the life on Tahiti was overmastering. Putting Bligh and 18 others — all it could carry — into the launch, a boat 23 feet 9 inches in length, 6 feet 9 inches in beam and 2 feet 9 inches in depth, together with a sparse supply of water and rations, allowing no arms, they set the lot adrift in the Tongan Group to find their way Home as best they could — or perish.

Bligh was not in touching land, but that landing on Tofua cost him the life of his Quartermaster, John Norton, and drawing off, he vowed that he would make no further landing till he had reached a land of civilized folk. He did not of a certainty of the settlement just made at Port Jackson — the Sydney of today — so headed west, passing group after group of savage lands, till passing through the Torres Straits, he reached Timor, 3, 618 miles away, a mighty feat of seamanship as well as of endurance, nor lost he any of his men.

His Log Book is to be seen today in the Mitchell Library at Sydney. I had the pleasure to handle it, with its water stained pages and its neatly written entries day by day.

Mutiny is ever an evil deed and yet those mutineers may have endured too much for human patience to stand more. That same Commander was sent by the Home Authorities a while later as Governor of the new settlement at Sydney, Australia. Not long after, the settlers rose in revolt at his imperiousness and imprisoned Bligh in his official residence. They could stand him no more; his rule they declared to be impossible for free men. Both sides appealed to Home. Bligh was recalled, promoted to Vice-Admiral, but no further employment was given to him.

The mutineers who seemingly had compelled three midshipment — in those days a naval rating, not an officer — and others to remain with them, turned and made back towards Tahiti. They were conscious of their peril, for before returning to that island, they made effort to seek safety on other. They went south to the Australs. Reaching the island of Tupuai, the natives resisted their landing, but some cannon shot driving the inhabitants back from the shore, the Bo'sun's mate and his men gained the land. Their stay was short, as the natives continued very hostile, and the Bounty was headed for Tahiti. But not to stay, despite some aboard. As a blind, the natives were informed that the Bounty had fallen in with Captain Cook — already a hero in the eyes of Tahitians — and by his orders, Bligh had been left on Ai-tu-taki to await their return with supplies and such natives as might wish to remove to New Holland. Thus ruse secured for them not only ample provisions, but nine men, eight boys, ten women and a child. After sailing, stowaways were found aboard. Making for Tupuai again, thus reinforced, they landed and built a Fort on the south coast of the island. It was an earthwork affair, 88 yards square, and had a moat 18 feet broad and 20 feet deep. To me, long years after, no sign remained save the barest outline.<sup>69</sup>

But the Tupuaians were as determined as before to repel them. The clash this time came over the mutineers' needs, and the chief contentions over the white man's support. A miniature battle raged, over sixty natives fell — cannon and musquet against spears and stones — but the band had had enough. Once again they set sail for Tahiti, there to take their chance. But not all were so minded, their Leader amongst the few. It was well for these.

---

<sup>69</sup> This is the only reference that WWB makes to his visit to Tupua'i.

Justice, though necessarily slow, reached out from Home and laid hands upon fourteen — all those who had remained upon Tahiti, save two, one having shot the other, mainly out of jealousy, and the natives, in revenge for their sailor friend, stoning the murderer to death. They were placed in irons, confined in a cage on the deck of the H.M.S. Pandora, and carried off for trial. The ship was wrecked on the Great Barrier Reef off Australia, and four of the fourteen were drowned, two with their shakles on; the rest escaped.

Four were acquitted, proving to the Court Martial their desire to leave with Bligh, but that there was no room in the boat for more, and that they had built a craft on Tahiti to leave the rest, but it was hopelessly unseaworthy. The last of the midshipmen was sentenced to death, despite his protest, together with two others, but these three were granted freedom, two by a King's Pardon, the other by a legal technicality, the midshipman, Peter Heywood, dying as a Captain R.N. Three were hanged.

Meanwhile, on September 20, 1789, those who refused to remain on Tahiti had set sail to find better security elsewhere. These were nine in number, their names being Christian, Adams, Young, McCoy, Quintal, Mills, Williams, Martin and Brown.

They took with them three Tupuaians, their names being Oohu, Tita-haita and Taroa Meina (a young Chief). From Tahiti, four men went, their names being Talolo, Niau, Manali and Timna. Eleven Tahitian women, one a girl of fifteen accompanied the Band, their names being Mana tūa, Mata oha, Vahi netūa, Te Valua, Opuli, Fahutu Te Lahu, Tohi mata, Tohaiti, Maleva, Toha-lo-mate and Te'o, the young girl, later called Sarah and Susannah. The *Bounty* therefore set out on its last voyage with 29 souls aboard.

Of the Nine, it was Christian who was the Leader and who till his death (or disappearance) commanded the Band. He had a tall, well built figure and was of unusual strength. Born in Cumberland, he was an adept at all manly exercises, a true son of his County. He affirmed from the first to last that he alone was responsible and that none should be condemned for it but he. His brother, a Professor at Cambridge and a legal writer of eminence at the time, stood up to the last for Fletcher Christian's action, pointing out the tyranny and constant abuse of power of Bligh.

Adams,<sup>70</sup> whose name on the books was Alexander Smith (but who for some unknown reason chose in 1814 to change his name) was the son of a Thames lighterman, and in a measure had taught himself to read and write before joining the Navy. On the *Bounty*, he was one of the seamen.

Young, as a midshipman, was far above the rest, save Christian, in education, but of a retiring nature, ranked amongst the combined mutineers after the above two forceful characters. He was a devoted admirer of Christian from the *Bounty's* first setting out, and threw in his lot with the eight fugitives, not being willing to part company with the Leader.

McCoy, Quintal, Martin and Williams were seamen; Mills was gunner's mate; Brown was to assistant expert gardener, who was to tend the breadfruit trees to be carried from Tahiti, but which were set out and grew on Pitcairn instead of the West Indies.

<sup>70</sup> [John Adams \(1767–1829\)](#)

Christian knew of the volume “Hawksworth’s Voyages” being onboard, wherein the *Swallow*’s voyage in the South Sea in 1767 was described, and noted Pitcairn’s isolation. He steered for it, 1200 miles away, but failed to locate it for several days, owing to its longitude being incorrectly noted in the Journal. They well nigh had given it up when, at last, on January 23, 1790, that haven of refuge appeared on the horizon. Only one cove appeared possible for shelter, bristling, however, with half submerged rocks.

They were, at first, much disturbed on landing, at finding stone axes on the shoreline, evidence of prior occupation, and exhaustive search was made, discovering to them house posts and other debris of buildings. On the heights were ruins of stone maraes (places of worship, sacrifice and council), stone images ten to twelve feet high set on stone platforms, as on Easter Island, and rough artistry on rocks. Here, three degrees outside the Tropics, were banyan trees, coconuts, groves of bananas, many a breadfruit tree, the taro and the yam, the paper bearing shrub, the pandanus, dracaena, the hibiscus and the candlenut tree. These could not be indigenous. The nearest islands, today, in the Tropics where they grow are Tahiti and the Marquesas, over 1000 miles away. When the newcomers began to dig, they unearthed skeletons and stone axes. One of the skulls rested upon a pearl shell, showing that there had been touch with the Gambiers. But when?

After stripping the *Bounty*, conserving its bell, its Bible and Prayer Book, they first burned, then sank the ship, and with it the guns. Christian next divided the island into nine portions, and the native men had to work under the orders of the Nine. For two years, there seems to have been comparative peace and success.

---

The fatal quarrels began by Williams seizing a native’s woman upon the death of his own by her falling off a cliff, and the death by poison of two of the native men. Williams, Martin, Mills and Brown were killed by the five native men, leaving no issue, save Mills, who was the father of two.

Christian was the next victim, killed according to Adams while working on his plantation, but there are versions of the ringleader’s end. It was said by the first generation of their successors that, growing desperate upon fully realizing what his act had cost him and his fellows, he cast himself off the cliff. Others, that he fell in a struggle with Adams, who sought to restrain him from giving himself up to a vessel seen on the horizon in 1794, which, however, veered off and was seen no more. Further, it is stoutly affirmed that he got away from the island, unbeknown to the rest, and was seen by those who knew him well both in the south of England and in Cumberland, his home. He left three children; his eldest son, the first babe born on Pitcairn, he named “Thursday October” to keep in remembrance both day and month.

Now the women who had lost their men turned upon the natives and slew them, save one whom Quintal shot. Some of these newly made widows sought next to escape from an island running with blood. They tried to get away in a rudely constructed raft, secretly put together, but their courage failed them just when offshore. Before long, death claimed Quintal’s woman by a fall from the cliff.

McCoy, who had been employed in a distillery at Home, made a concoction from the Ti plant, as he had seen done on Tahiti, and with it, both he and Quintal ran amuck, McCoy in his delirium casting himself, like others before him, off the cliff. Quintal, after losing his woman, became morose and, with the liquor, so dangerous to the other two left, and the women and bairns, that Adams slew him. In 1800, Young died of asthma, which left Adams alone — with 9 women and 23 children. These children had the following surnames: Christian (3), Adams (4), Young (6), McCoy (3), Quintal (5) and Mills (2).

But eleven years since the Mutiny, ten since landing, and but One Mutineer remained.

---

It was in 1790 that the *Bounty* dropped anchor off Pitcairn. For over a year after landing, a sentry was set day and night on the loftiest height, through fear that the island was not altogether abandoned by natives, or that some ship might take a fancy to call in passing to the whaling ground to the south.

Besides the ship which approached in 1794, but fell off greatly to their relief — save Christian's seemingly — some years later another came and sent a boat towards shore, but at sight of the foaming breakers, the crew turned back, the ship sailed on nor ever reported the happening, as no vestige of humanity was seen. The seclusion therefore so diligently sought was absolute till 1808, when the American whaler, the *Topaz*, Captain Folger<sup>71</sup> its master, called to explore and look for water. To his surprise, he saw smoke issuing from amongst the trees and, alter, habitations. Putting off with a couple of boats, a canoe came out and its occupants hailed the boats in English, of a kind, offering coconuts and urging the Captain to land, as a white man lived ashore. He found a community now grown to 35. Adams was keen to hear the news of the outside world, and in return he made presents to the Master not only of hogs, bananas and coconuts, but also of both the chronometer and the azimuth compass of the *Bounty*. The former had been used by Cook in two of his Voyages and had been handed by him to Bligh — once a midshipman and later a higher officer under Cook — for use on his own sloop of war.

Captain Folger had it taken forcibly from him at Valparaiso by the Spanish Chilean Governor, who confiscated his vessel, but it was recovered eventually by the British Naval Authorities and now rests in the United Services Museum in London.

The *Topaz*'s discovery was reported to Admiral Hotham,<sup>72</sup> then on the South American coast, who transmitted Folger's letter, together with the azimuth compass (used to find the exact variation of the magnetic needle), but the war with Napoleon occupied the main attention of all, though the strange news spread over England through the newspapers and periodicals of that day.<sup>73</sup>

II <sup>74</sup>

Callers — Parson Nobbs — The Removal — “Lord” Hill

**John Adams (Alexander Smith),  
the Last of the Mutineers**

It was in 1814 that the next visit was paid, though passing vessels had been seen, and one boat party, at least, must have landed unperceived, for a clasp knife was found lying on the beach beside some coconut shells broken open. Now two British frigates anchored, the *Briton* and the *Tagus*, which were in search of a ship which had been holding up English whalers in the South Sea. Both Captains, Sir Thomas Staines and Pipon, <sup>75</sup> went ashore and were greatly interested, as their Report to Home evidences, in all they saw. The Community had grown to forty. They called on Adams in his home, where he spoke respectfully to them, cap in hand and the while smoothing his scanty locks, the old training at once asserting itself, and he expressed a willingness to return to England and take his chance.

He had reformed himself wholly since those tragic days now passed. The *Bounty*'s Bible and Prayer Book, which Christian had salvaged, were his Rules of Conduct. His people were perfectly in hand, he the Autocrat. His word was Law. He had broken his Country's laws and stood prepared to suffer if it had to be. Despite the fact that both Captains pledged their honour for his perfect safety, the entire Community raised such a frenzied weeping and wailing that he had to fall in with their wishes and remain.

Everything in and around the various homes was shipshape, neat and spotlessly clean. The clothing of all was made from the bark of the mulberry tree. Their cooking was done by heated stones in a

<sup>74</sup> See also *A Link With the Bounty* in the April 1945 edition of the *Pacific Islands Monthly* in Part VII, and *The Island of Despair (III) : The Coming of the Pitcairners* in Part XI, *Roaming the Pacific Waters*.

<sup>75</sup> [Thomas Staines \(1776–1830\)](#). Captain Philip Pipon.

hole in the ground. Fire was produced by friction. Whilst men and women ate apart — the South Sea custom of old — the latter had a vote on all community matters alike with the men.

The Report of these Captains reaching England, a great interest, this time, was taken in the island both by individuals and the two great Church Societies for the Propagation of the Gospel and for Promoting Christian Knowledge, who by whalers and trading schooners managed to send both books and clothing. The London Missionary Society was not behind the rest. In its Directors Report (see Quarterly Chronicles Vol. 2), they say “In the year 1817, Bibles, Testaments, Prayer Books and Spelling Books were sent out, which have been received and an acknowledgement, signed by John Adams, the Father of the little colony, transmitted to the Treasurer.” But the Home Authorities left their health and possible other needs still severely alone.

In 1819, the East Indiaman *Hercules* called and its kindly Captain <sup>76</sup> left many much needed carpenter’s tools. In 1823, the whaling ship *Cyprus* of London called in for water, and one of its seamen was allowed to remain by Captain Hall <sup>77</sup> at the urgent request of all; another was a runaway. Their names: Buffett and Evans. The former was fairly well educated and the Pitcairners, with Adams at their head, being keen to have their children taught beyond Adams’ ability, now that Young had died, begged him to become Teacher. These two then were received into the little Community and reckoned as one with them. Buffett married a Young; Evans, an Adams.

In 1825, H.M. Sloop *Blossom*, Captain Beechey R.N., <sup>78</sup> fitted out for a voyage of discovery, stayed at Pitcairn for three weeks and reported favorably, as had those before him, but touches upon the question of removal. His letter follows:

Pitcairn Island  
October 21, 1825.

We found all well: the Patriarch still alive and in good health. Their numbers are fast increasing and the earth does not yield as it used, and Adams very reasonably apprehends that a distress and famine will visit the rising generation if they are not removed. He has begged me to solicit the attention of the Government to this point, praying that they will send some ship to transport them all to some place where they can all settle together. They are still very much in want of clothing, their only covering consisting of the wrappers made from the cloth plant, which are no better than their paper and in a shower of rain fall to pieces. Adams has also begged to have a clergyman from the Missionary Society.

In 1828, there came unexpectedly upon the scene, in a launch, one who was to play a prominent and important part in the life ashore. The story of his life up to then is a strange one.

Born in Ireland, not without some mystery as to high parentage, George Hunn Nobbs <sup>79</sup> was educated at his home town, then entered as a boy on the books of H.M.S. *Roebuck*. Transferred to the *Indefatigable*, he visited, by way of Cape Horn, New South Wales, Tasmania, the Cape of Good Hope

and St Helena. Having circumnavigated the World, he left the navy, still a young man, and was offered a berth on a ship of 18 guns, which went from England to assist the Patriots in their struggle for Liberty on South America's western coast. Arriving at Valparaiso, he found exciting times. He received a Commission as a Sub-lieutenant under Lord Cochrane <sup>80</sup> in the Chilean service. A full Lieutenancy followed, for gallantry in cutting out a Spanish ship of war from under the batteries of Callao. In a severe fight with another Spanish ship, in which he lost 48 out of 64 men, he and the rest were made prisoners. All but four of these prisoners of war were shot, Nobbs and three others being fortunately exchanged for four Spanish officers. Leaving the Chilean service, he reached Naples on his way Home. Making for Messina, his ship foundered, but he was among the saved in one of its boats. Reaching England, he sailed as Chief Mate on a voyage to Sierra Leone, where fever claimed all but the Captain, himself and two negroes. Working their passage back thus badly crippled, he, now in Command, took the same ship back to the fever coast, this time to be himself stricken down and for many weeks hovering between life and death. Having heard much talk of Pitcairn from one of those he had served under, he became attracted to it, and during his convalescence resolved to make his way thither to render a helping hand, if wanted.

Returning to England, he sailed to the Cape in hopes of catching some whaler which might call in at the island during its cruise in Southern waters. Failing this, he made his way to Calcutta, thence across the Pacific to his old haunt of Valparaiso, and thence to Callao, where he chanced to meet one Bunker, <sup>81</sup> formerly master of a merchantman, but who had fallen upon evil times and was endeavouring to fit out an 18 ton launch to make for other parts. Nobbs agreed to finance the needful with all his remaining cash, provided that he became co-proprietor and that the two sail for Pitcairn. This being agreed to, the two set out and in six weeks' time reached the island. But the exposure and lack of sleep, together with a rebuff in a love affair, seems to have told heavily on the older man, for after an attempt at suicide, Bunker died on the island a few weeks later. Nobbs used the launch's timbers to erect a modest home for himself, and thus commenced a connection with the islanders that lasted till 1884, a period of 55 years and a few months.

In Adams he found a true friend for the short time before the last of the Mutineers died, and was a faithful friend himself to that strange Community till his own end came on Norfolk Island, where his body lies. He was born in 1799 and died aged 85. His various duties and advancement will appear as the chronicle of the Pitcairners unfolds. His first was that of School Master. He had had a far superior education to that of Buffett, who somewhat unwillingly retired in his favour. He added to this, that of physician and surgeon, together with a lay Chaplaincy. He married a granddaughter of Christian.

There were things needing a little straightening out, ecclesiastically for one. Adams and Young, in their Day of Reform, had made sad muddle of the Prayer Book. Desiring to follow the Book's orders to the very letter, they held that as Ash Wednesday and Good Friday were laid down as Fasting Days, it followed that every Wednesday and Friday were the same, for its says too that they are Days of Abstinence. The difference between Fasting and Abstinence was quite beyond them. Buffett had been intelligent enough to show Adams his error. He remitted the Wednesdays, but held on to the Fridays till his death, which took place in 1829, in appearance aged far beyond his years, which were but 65. This order was a real hardship, but borne without a murmur through devotion to their Autocrat.

With Adams' death and Nobbs' arrival, the list of true "Pitcairners" ends. Their offspring alone today have right thereto in the succession. He or she must be either of the following: a Christian, Adams, Young, McCoy, Quintal, Mills, Buffett, Evans or Nobbs.

---

<sup>80</sup> [Thomas Cochrane \(1775–1860\)](#)

<sup>81</sup> Noah Bunker

In 1829, a Pearl Merchant and Trader in Papeete, Tahiti — Moerenhout<sup>82</sup> by name — paid a visit to Pitcairn, engaging a dozen of the young men as divers in the Gambiers. Returning them when the season was closed, he found fever ravaging the island, brought by a whaler whose sick crew the Pitcairners had housed and nursed back to health. Whaler and men had gone, but the 'flu remained. It was that which finished Adams, the last of the Band of 1790.

In 1830, H.M.S. *Seringapatam* reached the island and Captain Waldegrave<sup>83</sup> brought the first direct gifts from the Home Government to its smallest Colony. Those gifts of agricultural tools were very welcome. The inhabitants now numbered 81.

---

To few of these visitors, apart from Captain Beechey, had the islanders expressed any real wish to move. They were content. Though they came of stock who had defied and broken the Law, they were one and all enthusiastic Britishers, devoted subjects of their King and profoundly conscious of their duty to obey Authority. Adams had seen to that. It was this latter feeling that brought about two strange episodes in their history — the Removal to Tahiti and “Lord” Hill’s Governorship.

In 1827, Mr Canning<sup>84</sup> of the Foreign Office took action on Beechey’s report and wrote through the missionary Nott,<sup>85</sup> then Home on leave, to Tahiti as follows (extract):

To King Pomare III

Foreign Office, London. March 3, 1827.

It has become desirable that certain individuals who have been living for many years past on Pitcairn’s Island should be removed from thence to some other settlement in the Pacific. His Majesty has therefore given orders that a ship shall be employed, conveying them and their families to Tahiti, provided you may be willing to receive them into your dominions. The British Government persuades itself that you will not refuse your consent and will be pleased to extend your protection to them. His Majesty trusts that their peaceable and industrious conduct will be found to justify the hospitality and kindness which you may be pleased to show them.

In February of the year 1831, H.M.S. *Comet* arrived at the island and its Captain Sandilands<sup>86</sup> dropped a bombshell upon the contented Community with the news that he had orders to carry the whole lot off to Tahiti. The British Government had provided for a six months’ supply of food. Following closely upon the warship, there came the *Lucy Ann*, from Sydney, to receive them and their belongings. This schooner had been called into service from Norfolk Island, and doubtless the Pitcairners first heard from its crew news of a spot which in the future was to be their Home — at least for some.

<sup>86</sup> Alexander A. Sandilands

The unhappy people, whose numbers now had increased by births to 87, were faced with a dilemma. They had no real wish to go, specially now their Leader was dead, but it was an Order from Home. They could not rebel against the Mother Country and, therefore, without any heart in the matter, obeyed.

Pitcairn was deserted, save for some animals which had run wild. Tahiti was reached in March. Before one month was up, they had had enough. The morals of the Tahitians were not to the taste of the strict Pitcairners. The elders saw their younger ones sore tempted and getting out of hand. The change, too, took a heavy toll; 12 died in quick succession of a malignant type of fever wholly unknown to them. Buffett and nine others hired a small schooner and fled before April was out, but four died on the way back and yet another on arrival. The British Consul took pity on the rest, 65, and chartering an American brig, the *Charles Dogett*, Captain William Driver,<sup>87</sup> sent the rest back in September. Five died upon arrival.

That little trip arranged by intermeddlers cost 22 lives. Those who had first fled did not arrive much sooner than their fellows, for the wind was contrary and they were blown to the Western Pacific isles, where a French brig came to their rescue and carried them back to their homes.

---

There was one man upon Tahiti who had watched all these proceedings and saw his opportunity. Joshua Hill<sup>88</sup> was a man of close on seventy years when he followed up the Return of the Exiles by landing, himself, on Pitcairn. Then things happened. He gave himself out to be a nobleman from Home, sent by the Government to take over the "Governorship" of the island, and that the men of war on the Pacific Station had been placed under his orders. The simple islanders were overawed by these high claims, but Nobbs, Buffett and Evans, who knew the outside world, made light of his pretensions. Then "Lord" Hill declared war to the death against the three 'foreigners' as he termed them.

Despite the warnings of the three as to the imposture being practised, the fear that in opposing "Lord" Hill they might be defying the Mother Land forced them to submit, and, though most reluctantly, they obeyed his orders. In one matter, and one only, did the elders have cause for gratitude to the grey-haired 'nobleman'. Some of the younger men, through the looseness of life they had seen on Tahiti, determined to follow McCoy's example, and the Ti root was ground once more. This action was stoutly opposed by Nobbs, but he was told to mind his own business. The noble "Lord", upon arrival, quickly settled the matter. He smashed their stills and everything connected with the business, and threatened heavy penalties if the craze for strong drink did not at once abate. He formed the whole island into a Temperance Society and coconut milk and water were once again the drink of all.

Nobbs was dismissed as Schoolmaster and Hill took his place. In the heyday of his power, he sought to win the people from the Church of England to Methodism, but in this they stood firm. But in all else for five years they blindly followed him because to them he represented Authority.

No vessel that could contradict his claims called to relieve the situation, so Hill had full swing. He gave out that he had written to the British Consul at Valparaiso to get the Admiral on the Pacific Station to call and remove the three foreigners. If he did, along with it went some other letters. Nobbs wrote that the man had ordered 'the three foreigners' and their families to be turned out of their homes. Their muskets were taken from them by order of "The Governor of the Commonwealth", and, loaded by him, were kept in his own bedroom for the use of the "magistracy" of the island. Every Sunday he

---

<sup>87</sup> [William Driver \(1803–1886\)](#)

<sup>88</sup> [Joshua Hill \(1773–1844?\)](#)

had a loaded musket placed near him in Church to awe the congregation. He threatened, when protests were humbly raised on any matter, to have a Military Assistant Governor with a squad of soldiers sent to him, to put them in subjection. In every possible way, he made the place too hot for the three foreigners and they were glad to escape to Tahiti on a passing vessel. From thence, Buffett wrote to the Admiral, giving further information.

Hill had appointed two “Privy Councillors”, had made laws of his own, built a prison, proposed to send to England for wives for the young men, and had a Riot Act in readiness. Buffett, before his escape, had a taste of the real thing. He had decided to take away his wife and children with him. This reached Hill’s ears. He was brought to trial, the “Lord” being the Judge, the Jury and the Executioner. He was flogged, beaten over the head, a finger broken, and was suspended from a rafter in the Meeting House by his other hand. When the assembled women cried Shame, “Lord” Hill read out his Riot Act and said that he would be justified in shooting them.

Buffett’s sentence by this imposter, as taken from the Island Register kept since Adams’ day, reads as follows:

Pitcairn Island, 5<sup>th</sup> August 1833.

... It only remains with us to declare the sentence of the Law, which is, and the Court doth accordingly adjudge, that you receive forthwith three dozen lashes with a cat upon the bare back and breech, together with a Fine of three barrels of yam or potatoes to be paid within one month, or, in default, an extra barrel will be required for this reiterated Contempt of Court.

Hill had also enacted a law of High Treason, and when Evans humbly requested a copy as a guide to his future conduct, he was ordered to be brought to Court, where Hill tried the case and administered the lash.

Those were high times for His Lordship, and the islanders were submissive as sheep, for had not the Home Authorities sent him? But the end was now not far off. The unhappy Nobbs, with Evans, sought distraction in their exile as Missionaries to the Gambier Islands, but Buffett kept close at Tahiti. He kept also after the Admiral. In 1836, H.M.S. *Actaeon* called at Pitcairn, with Lord Edward Russell<sup>89</sup> in command. Hill had unfortunately given out that he was a near relative to the Duke of Bedford,<sup>90</sup> the father of his Commander. The Imposter was unmasked. Russell reported to his Admiral, who promptly, at last, sent H.M.S. *Imogene*, secured the Fraud and carried him off to Valparaiso. Neither his past nor his future were ever known. The three foreigners returned by the schooners *Olivia* and *Olive Branch*. Peace ruled once more. Obedience to Authority had cost them dear. In a letter written a while later by the Community to friends outside, Hill is let down gently. Their patient souls describe him as “a partially deranged imposter”.

“Bad weather” — The Laws of Pitcairn — Nobbs’ luck —  
Norfolk a possibility — Home action — The Removal — The  
Arrival — The Homesick

The rudder of H.M.S. *Bounty*, fished from the sea in 1933, is now on display before the Magistrate’s House on Pitcairn Island. The magistrate, Parkin Christian, stands behind the relic.

In 1838, H.M.S. *Fly* (Captain Elliot) <sup>92</sup> looked in. It was then that the Island was taken formal possession of for Great Britain. None previously had thought action necessary, but the islanders complained to Elliot that lawless whalers had called and had said that they would do as they liked with people and possessions, for the Community could show neither Flag nor written Authority for their claim as a British Dependency. Forthwith the Union Jack was formally hoisted and saluted, and Pitcairn became part of the growing Empire. Its numbers had reached 102, an exact proportion of the sexes, 51 of each.

Now, however, one begins to hear of the health of the islanders giving way, and rumours as to their need of change. In 1841, influenza was very prevalent. Deaths were still rare, though it claimed Christian’s native wife, dubbed by him facetiously *Mainmast* in place of her Tahitian proper name and called by all *Mai’mas’*. She was of great age, the last but one of the original party. But one and all became too weak to work in the plantations, and weeds overran the land. It was this same year that Captain Jones <sup>93</sup> of H.M.S. *Curaçao* raised the charred hull of the old *Bounty* to find its heart of oak still sound.

<sup>91</sup> See also *The Island of Despair (III) : The Coming of the Pitcairners* and *The Island of Despair (IV)* in Part XI, *Roaming the Pacific Waters*.

<sup>92</sup> Russell Elliot

<sup>93</sup> Jenkin Jones (ca. 1793 – 1843)

In 1843, Elizabeth Island, one hundred and twenty miles off, was visited by some of the Islanders, but they brought back a wholly unfavorable report as to change. In 1844, H.M.S. *Basilisk* called and left a sonorous bell for the islanders for calling worshippers to Church. For years, a horn had been used, and, when worn out, a musket shot took its place.

In 1845, half of the population, which had now reached 122, were down with new sicknesses, rheumatism, skin diseases, consumption and asthma, whilst a cyclone had destroyed their boats; two hundred coconut trees had been swept into the sea; a plantation holding a thousand yams had been washed out; and plantains without number destroyed. That year saw the recovery of two of the *Bounty*'s guns after a 55 years' burial in the deep. One was found spiked; the other was mounted for use on festal occasions, which even the cyclone could not banish from their minds. That unspiked gun, eight years later, was to claim the life of the island's then Chief Magistrate McCoy, who inadvertently using a ramrod made of a house rafter with a nail at the end, the friction of the latter caused a premature explosion. He wished to fire a parting Salute to the good ship H.M.S. *Virago*. The Captain and the Surgeon hastened ashore on hearing the cries of the people. To make sure of no such further tragedy, the Captain spiked that gun also. One of those two guns I saw when staying for awhile on Norfolk Island.

The same year, 1845, Buffett was in Honolulu and saw the British Consul General Miller.<sup>94</sup> On his return, the following letter was sent to him:

February 12, 1846

Hon. Sir

Mr John Buffett has told of your kind offer to the inhabitants of this island; we decline accepting it at present, but we will take the matter into consideration, and if after this we approve of it, we will write and inform you of it; at the same time, dear Sir, we thank you most kindly for your offer.

Arthur Quintal  
Chief Magistrate

In 1849, the record is again of much sickness. Two men of war called. The *Daphne* brought a bull and cow — to the dismay of the islanders, their lives were short — as also rabbits. The Home Government was evidently not again contemplating a removal. But the *Pandora*'s Captain reported Home that the small area of the island was calling the attention of the islanders to the need of change, but they wanted an unoccupied island where there would be none to interfere with them.

In September 1850, Susannah (or Sarah), the last survivor of those who reached the island sixty years before, she being at the time fifteen years of age, passed off the scene.

Mr Brodie,<sup>95</sup> a roamer, and four others, one being Carleton,<sup>96</sup> the Supercargo, were this year suddenly marooned upon Pitcairn, their ship being blown out to sea. He spent a fortnight there, before another passing vessel was signalled and their journey continued. There was room for but two. Carleton and

<sup>94</sup> [William Miller \(1795–1861\)](#). See Part IX, *Old Time Tahiti*, Chapter 10, Note #3.

<sup>95</sup> [Walter Brodie \(1811–1884\)](#)

<sup>96</sup> [Hugh Francis Carleton \(1810–1890\)](#)

Brodie sailed, but the other three — amongst whom was the notorious Baron de Thierry,<sup>97</sup> “King” of the Marquesan islands and other wild ventures — had longer to wait before escaping. Carleton, possessed of much musical talent, used his enforced leisure in forming a singing class and bringing order out of chaos both as to time and tune, so that his memory abides to this day.<sup>98</sup>

Brodie took letters Home from both Nobbs and Buffett to the Government admitting the need of removal, though the islanders dreaded the change. If an uninhabited island could be found, they would bow to the inevitable, all but a few who would never leave. Though eventually all did move, we shall see that these latter kept their word by returning, and their descendants are the Pitcairners of today.

Brodie, on reaching England in 1851, started a Pitcairn Island Fund to purchase necessities for the people, and published a book<sup>99</sup> in which is the first public mention of Norfolk as a possible home. He wrote “Should the Home Authorities finally decide upon abandoning Norfolk Island as a penal settlement, which report says there is a chance of, then a more beautiful or suitable location could scarcely be found.”

---

It is through this visit of Brodie that we have on record “The Laws of Pitcairn”. The quaintness of some of them merit a note.

A Public Journal shall be kept by the Magistrate and shall, from time to time, be read out, so that none shall make excuse through ignorance.

If a dog kill a goat, the owner of the dog must pay the damage, but should suspicion rest on no particular dog, the owners of dogs generally must pay the damage.

If a fowl be trespassing in a garden, the proprietor of the garden is allowed to shoot and keep it, while the owner of the fowl be obliged to return the charge of powder and shot expended in killing the bird.

If any person under the age of ten shall kill a cat, he or she shall receive corporal punishment; if anyone between the ages of ten and fifteen shall kill a cat, he or she shall pay a fine of twenty-five dollars; any master of a family killing a cat shall be fined forty dollars.

Carving upon trees is forbidden.

No females are allowed to go onboard a vessel without permission of the Magistrate. If he does not go onboard the boat himself, he is to appoint four men to look after them.

Perhaps, as to this last Law, they had learned a lesson from two maidens, who, alone in all the years, out of their small community, had been won “for keeps” by rollicking Jack Tars.<sup>100</sup> Back in 1817, Jenny had been won by an American onboard the *Sultan*, and in 1826, Jane had gone off in the *Lovely* for London. They never returned.

---

<sup>97</sup> [Charles Philippe Hippolyte de Thierry \(1793–1864\)](#)

<sup>98</sup> Regarding Carleton’s music class, see Chapter VI of [The Island, the People, and the Pastor](#) by Rev Thomas Boyles Murray (London, 1853).

<sup>99</sup> [Pitcairn’s Island and the Islanders in 1850](#) by Walter Brodie (London, 1851).

<sup>100</sup> [Jack Tar](#) was a common English term originally used to refer to seamen of the Merchant or Royal Navy, particularly during the period of the British Empire.

The year 1852 was an eventful one for Nobbs. Rear Admiral Moresby <sup>101</sup> called in his Flagship, the *Portland*. He was a man of deeply religious fervor and at once became most anxious that the islanders should have the full privileges of Mother Church, which they could not do, since Nobbs, their nominal chaplain, was but a layman. The Admiral offered not only to pay Nobbs' passage home for ordination, with £100 to help him upon arrival, but to carry his daughter to Valparaiso, there to be taught sewing and other domestic duties at his expense. Nobbs' son Reuben was also to be taken there for his health, he having accidentally shot himself through the groin whilst out hunting goats run wild.

This generous offer of the old sailor was accepted with unbounded joy by the whole Community. That they should not suffer during Nobbs' absence, the Admiral left his own Chaplain, Mr. Holman, <sup>102</sup> on the island. Father, son and daughter therefore went off, Nobbs himself amazed at his good fortune. Poor Lay Chaplain! His Sunday Bests had long felt the effect of constant service since landing in 1828. Years before this offer came, he had written "My one remaining black coat has to be reserved for marriages and burials." Even that had gone, and now he was to be a real Parson.

He reached Home; was ordained readily by the Bishop of London; made much of; presented to Queen Victoria; preached from many pulpits; through his presence, much money was raised. Brodie's Pitcairn Island Fund was placed under a controlling Committee, the most pressing needs of the Pitcairners were purchased and £500 reserved.

Nobbs, the Parson now, set out on his return to be picked up with son and daughter at Valparaiso by the Admiral, and the Bishop of London had added Pitcairn Island to his Diocesan duties, for all Colonies without Bishops were his charge. He had placed Nobbs on the S.P.G. <sup>103</sup> list of Missionaries and, as "Chaplain of Pitcairn Island", was assigned the princely salary of £50 a year.

---

The year 1853 saw much of moment to the island. In January, Mr Nicolas, <sup>104</sup> the British Consul on Tahiti, visited Pitcairn in H.M.S. *Virago*, the first ship to be seen by the islanders propelled by steam, and Chief Magistrate McCoy (to meet his death as the ship left) told him that the distinct wish of the people was for removal to Norfolk Island. He took action thereon, as will be seen, and things were moving at Home. As the full-fledged Chaplain left England for his flock, a despatch went at the same time from the Secretary of State for the Colonies to Governor Denison <sup>105</sup> of New South Wales referring to that Governor's proposal to evacuate Norfolk Island. "This place has been suggested as fit for the reception of the small body of settlers now existing on Pitcairn's Island," and asks (a) How soon Norfolk Island would be empty? (b) What buildings and land would be available? (c) What arrangements were possible at his end for transfer, if such was approved?

Captain Prevost <sup>106</sup> had brought gifts with him on the *Virago*. He had with him cages containing songsters to make up for lack of them on the island, and Lord Palmerston had been thinking of the islanders for he had sent along roses, myrtle and some fig trees. The Captain added to all these as much varied provisions as he could spare, but they were sparse.

<sup>105</sup> [William Thomas Denison \(1804–1871\)](#)

<sup>106</sup> [James Charles Prevost \(1810–1891\)](#)

Late in the same year, Admiral Moresby reappeared, bringing back the Reverend George Hunn Nobbs, his daughter, who had greatly profited by her opportunities, and the son, whose health was waning fast. The new arrivals found things in a very bad way since the *Virago* left. For months past, the islanders had been living on berries, pumpkins, coconuts and beans. Their Pastor records that “hunger had nearly worn them to the bone.” To the good Admiral they handed a Statement (agreed to by all this time) as follows: “As regards the necessity of removing to some other island or place, it is very evident that the time is not far distant when Pitcairn Island will be altogether inadequate to the rapidly increasing population, and the inhabitants do unanimously agree in soliciting the aid of the British Government in transferring them to Norfolk Island or some other appropriate place.”

With the Admiral went his own Chaplain once more, and the Reverend Nobbs now took up his old duties, with additional spiritual powers. He and his flock had to wait with what patience they could, and on terribly “short commons” for what next might happen.

---

The decision to accede to their wishes and remove them was sent to Pitcairn from the Society Islands by Mr Nicolas, the British Consul for that Group, in the following letter:

To the Pitcairn Islanders.

Raiatea, July 5<sup>th</sup>, 1854.

My dear Friends,

In accordance with your wishes conveyed to me through your late lamented Chief Magistrate McCoy, I addressed the Earl of Malmesbury <sup>107</sup> on the subject of your removal, either wholly or in part, to Norfolk Island, provided the Government would consent to cede it to you... Norfolk Island will be available for settlement of the Pitcairn Islanders, or as many as will remove thither, by the end of the year 1854. Her Majesty's Government will also take measures to provide a vessel which shall call off Pitcairn's Island towards the close of that year for the purpose of removing the people to Norfolk Island.

While communicating this intelligence to you, I am at the same time to acquaint you that you must be pleased to understand that Norfolk Island cannot be ceded to the Pitcairn Islanders, but that grants of allotments of land will be made to the different families. And I am desired to further let you know that it is not intended, at present, to allow any other class to settle or reside or occupy land upon the Island.

But 1854 passed and no ship appeared. Officialdom moved slowly in New South Wales, from whence the transfer brig would come. Governor Denison wanted to be sure of his ground.

In April 1855, Captain Fremantle <sup>108</sup> in H.M.S. *Juno* arrived, sent by Denison to find out if the islanders were really willing. Some had evidently gone back to their first resolve, for a vote being taken, 153 were for removing and 34 against. These latter wanted to know what protection and help would be given those who preferred to remain. The Captain could promise neither. They weakened and appeared to fall in with the rest. The Captain reporting back, the Governor now hired the

<sup>108</sup> [Charles Howe Fremantle \(1800–1869\)](#)

*Morayshire* at a cost of £4,500 to effect the transfer, and in it went Lieutenant Gregory of the *Juno* to supervise and warn the waverers. Denison wrote, through him, that should any refuse, they must do so in the face of a warning that such a step would isolate them more than ever.

In April 1856, the *Morayshire* (Captain Mathers) dropped anchor off Pitcairn and on the 3<sup>rd</sup> of May, all were embarked, with their possessions and livestock. The parting was a wrench. Here is what Nobbs wrote in his diary: “May 3<sup>rd</sup>. Breakfast eaten with heavy hearts. My family being amongst those appointed to embark first, Mrs Nobbs and I went previously to the graveyard where lie the remains of our first born,” (the Reuben aforementioned). And as writes another, every family had a like visit to pay as they parted from a Home where nearly all of them had been born, where many of them had been married, and where each was leaving amid the peaceful dead, a father, a mother, a brother, sister, child or sweetheart. The Community numbered that day 194, consisting of 40 adult males, 47 adult females, 54 boys and 53.

That was no pleasant voyage. There was 2,200 miles to traverse over what proved a boisterous sea. It took a full month, and despite the fact that all had lived their life in canoes and were half fish in their dexterity in the water, the women and children and most of the men were desperately seasick. There was no surgeon onboard, nor attendants for those in need, save a kindly disposed crew. Here Parson Nobbs was in his element, a host in himself, a good sailor, a bit of a doctor, and a cheerful soul.

At last, the new Home hove in sight, and with the usual big heartedness of a sailor, Captain Denham<sup>109</sup> of H.M.S. *Herald*, on hydrographic work in Norfolk waters, had delayed his departure to lend a helping hand and cheer the weary travellers with a sight of their beloved men-of-war. Captain Fremantle of H.M.S. *Juno* was also on the scene with like kindly intent.

---

There had been left on Norfolk Island, when the last convict had gone, 1855, an Assistant Commissary Storekeeper, Stewart,<sup>110</sup> With him were a few others to look after things till the Pitcairners arrived, and start things going. And did ever Colonists in the whole history of the world find such gifts awaiting them! The Home Government was not going to do things by halves. Here is the Record, and all for 194 souls: 81 Buildings, in perfect condition, including homes, chapel, schoolroom, hospital, workshops and mills; household furniture in each home; 1300 sheep, 430 cattle, 22 horses, 10 swine, fowls beyond count; 45,500 pounds of biscuit, maize, flour, rice and groceries; 16,000 pounds of hay; 5000 pounds of straw; with six months’ supply of potatoes and peas coming fast from Sydney. Besides all these, there were sheds full of ploughs, harrows, carts and garden tools. They found the land tilled, roads made, rivulets bridged. None of the pioneer’s hardships for this Community. It surely stands alone, in our history, as a monument of the Old Mother’s love for her far off children.

They landed on the 8<sup>th</sup> of June 1856, a Day of Remembrance for “Norfolkers” for all time. They were amazed. “Everything astonished us,” writes one. “The size of the houses, the great height of the rooms, the number of cattle, the oxen yoked to the carts.” Many of the younger had never seen horses before, and the implements and carpenters’ tools were a nine days wonder.<sup>111</sup>

<sup>109</sup> [Henry Mangles Denham \(1800–1887\)](#)

<sup>110</sup> Thomas Samuel Stewart

<sup>111</sup> Nine days wonder: a novelty that loses its appeal after a few days.

The Orders were for each family to be provided with a house and to get a share of all the supplies, the overplus to be stored as common property, to be shared out later or sold outside for the benefit of all.

A few days passed; things were set running, then the *Herald*, the *Juno* and the *Morayshire* up anchor and away. The former Pitcairners were left alone, except for a Corporal's Guard of Assistants, in their new possessions. "We are very busy. Some of us are having lessons, from those left to help us, in ploughing, milking, sheep shearing and grinding corn." They soon learned how to ride those horses. The furniture was a puzzle to arrange; it was so overpowering that the youngsters stole off with many a piece to enjoy a roaring bonfire. One of their first acts, however, was to plant their much loved Kumera or sweet potato; nothing was quite so good as that.

Those grim walls and gaols could not fail to awe and impress those simple souls. Another writes, "Think of us in the Church which had formerly been occupied with the Outcasts of Society, then imagine us in the graveyard filled with mounds that contained hundreds of their bodies. I went through the prisons; no sound was there. It was harrowing to be continually stepping on bolts and shackles, and requiring much strength to swing on their hinges the ponderous doors of cells and dungeons. It seemed to me that here, even the very air was forbidden to enter." To the Chaplain those gruesome sights must have recalled his own working in the chained gang on the batteries of Callao, and his own near call to stand before a firing party, as many a fellow white man had done within Kingston's walls.

Of those who landed on the eventful day — at present 76 years gone by <sup>112</sup> — four still survive, so far as is known to the writer, one of them a boy, Cornish Quintal, who was then 16, the other three but children. <sup>113</sup>

But the first flush of the new conditions over, those nigh two score who had held out against removal began to look over the sea to the island of their birth. They seemed wholly unable to forget; nothing compensated for what they had left behind. They were Homesick. In December 1858, a little over two years since the change, the first lot went, sixteen in number, three adults and thirteen children, who hired a schooner, the *Mary Ann*, and despite the wrench of parting with the rest, sailed back. They were the Youngs and the McCoys.

The return of those sixteen kept Pitcairn Island as a British possession. Captain Proby Doughty R.N., calling later, learned from the islanders that a Frenchman's schooner, *La Josephine*, arrived the day after their landing, whose Captain was greatly surprised to find Pitcairn reoccupied. The French were out for all the isles they could secure in the South Sea. They held Tahiti, the Marquesas, the Australs, the Tuamotus, the Gambiers and Rapa. Now was the chance of Pitcairn. They failed, but only by one day, even as they failed similarly for the South Sea island of New Zealand.

The new arrivals found clear evidence that the island had been occupied since their departure and a slate was soon lighted upon on which was scratched the information that part of the crew of the American ship *Wildwave*, wrecked on Oeno Island, an Atoll some eighty miles distant, had reached Pitcairn, where they built a sturdy boat which carried them away. As a fact, these men reached Tahiti, whence the U.S. sloop of war *Vandalia* made for Oeno and rescued the rest of the *Wildwave*'s crew.

---

<sup>112</sup> WWB visited Norfolk Island in 1925, but wrote this text in 1932.

<sup>113</sup> WWB subsequently added the following in his notebook, on the blank page opposite: "*Aunt Rachel*" died August 1933, aged 84. "*Uncle Cornish*" died February 1934, aged 92. *Parkin Christian* died August 1940, aged 86. "*Aunt Selina*" died March 1943, aged 87.

In October 1860, H.M.S. *Calypso* paid a flying visit. Two years passed before another caller came, when in October 1862, H.M.S. *Charybdis* stayed for a day.

They came near to a tragedy just prior to the return of the second contingent, when a Peruvian slave ship called and endeavoured to secure the attendance aboard of the families ashore on the pretense of hospitality. Growing suspicious at his eagerness, two went off alone, got aboard and saw the truth for themselves.

In December 1863 — five years later — there was another stirring in the hive and 27 went, 10 adults and 17 children, in the schooner *St Kilda*. They were Christians, Youngs, Mills and Buffets. Together they number today 174. There are no other names of original Pitcairners upon the island; the rest are outsiders intermarried or wholly outsiders.

On Norfolk Island, the term “Pitcairners” is used only for those who landed in 1856. They dead, the name will cease to be used — an honored Name of the Past. All others call themselves “Norfolkers” and that name will remain.

With the resettlement of Pitcairn, this historical sketch finds a fitting conclusion.

#### Note.

The Pitcairners of today are Seventh Day Adventists. They have discarded the Church of their forefathers. When they returned from Norfolk Island, they were wholly without spiritual ministration. Parson Nobbs remained on Norfolk. The Home Authorities and the Missionary Societies had either grown cold over Pitcairn or were ignorant of the situation.

Young men were needed for white men’s plantations on Raiatea in the Society Group. They heard that those of Pitcairn were possibly available. They sent. Some came. The Adventists of Raiatea, ever on the lookout for fresh fields, heard of the vacant ground. They saw their opportunity and seized it, sending in October 1886 their missionary, John I. Tay, an American, and Pitcairn changed its religious opinion of the Sabbath, together with acceptance of the other peculiar tenets of the new Faith — none dissenting.<sup>114</sup>

---

<sup>114</sup> An account of the conversion of Pitcairn can be found on the website of the Pitcairn Islands Study Center of Pacific Union College [here](#). John I. Tay:

ACROSS TAHITI AFOOT <sup>115</sup>

## I

It simply had to be done, that crossing over and through the mountains from West to East. That it had seldom been done by white men in all the past years, and is rarely done today, only added zest to the undertaking. The start was made from Mateia, <sup>116</sup> 27 miles from Papeete, the Course from that village on the one coast to Papenoo on the other, the Way lying up the Vaihira River to the Lake of that name — the only one on Tahiti — which has to be swam; thence a climb over the Col d'Orufaaa, <sup>117</sup> a sharp descent into the valleys through which the Papenoo River winds, and a following of that stream down to its mouth, where the village lies. The experience taught me two things which I would fain pass on to others; first, that the course should be reversed, i.e., it should be from Papenoo to Mateia; and, second, to wait in Papeete till Papenoo's Chief sends word in assuring of fine weather. He knows. One lives to learn.

I had as my companion McComish, <sup>118</sup> a New Zealander who had long wanted to make the crossing, but could find no one ready to adventure. We were both in good training, long tramps and careful living had put us in fine fettle, <sup>119</sup> hard as nails. It was stamina and our native assistants alone that pulled us through. It is no trip for weaklings at the best of times. Consulting Papeete's residents as to the best month, and August being given me, I waited patiently towards its close. <sup>120</sup> Reaching Mateia, where we housed at a friend's country home, we secured three guides with the euphonious names of Tehea, Tainoa and Te: the two first named, pure Tahitians, the last, a native of Rarotonga, who, unlike the others, had not yet made the trip, but greatly wished to. With my companion in his 40's and they in their 30's, myself with the two ages added together, <sup>121</sup> we were a diversified party as to ages, but happily not in endurance. The men proved themselves indomitable, very goats for surefootedness and great of strength.

We had laid in supplies for a four days' trip at the outside, none supposing that it could last longer. We carried no luxuries, tinned meat, cheese, biscuit, tea and sugar sufficing, neither dishes, pot nor pan. Assured by our men that we must pack nothing but ourselves, they took the lot, ourselves with but light knapsacks of added clothing. Tahitians do not sling their burden on their backs, but attach the goods — here packed close in a kerosene can — to the ends of a seven foot pole, binding all firmly on with strips of bark, and balancing the pole on the shoulder, move swiftly on flat, on up or down grade, the balance always perfect. Ours were not light loads, yet the men never hesitated to add to them when they came across aught which might prove useful later on. It was worth the trip if only to see such feats of strength as those men showed, when — fording four and forty times, by my careful

<sup>115</sup> A somewhat different version of this chapter was published in the bulletin of the University School, [The Black and Red, Number 56, June 1929, page 53.](#)

<sup>116</sup> The current spelling is *Mataiea*.

<sup>117</sup> See *Lake Vaihira* in Part IX, *Old Time Tahiti*, which has a photo of the lake, and *Lake Vaihira* in Part XIV, *Tahitian Vignettes*. Instead of the *Col d'Orufaaa*, in the former WWB has the "hog's back" of a spur of *Orafara*, while in the latter he has the "hog's back" of a spur of *Orofena*.

<sup>118</sup> Captain J.D. McComish; see his letter, which he sent from his home in Sydney, in the 19 August 1936 edition of the *Pacific Islands Monthly*, pages 23–24, *Work of Mr. Bolton*, in Part VII.

<sup>119</sup> *Fettle*: condition.

<sup>120</sup> Given that WWB moved from Victoria to Tahiti in 1928 and that this story was published in the June 1929 edition of the bulletin of the University School (see the footnote above), this adventure probably took place at the close of August 1928.

<sup>121</sup> WWB turned 70 on 3 July 1928.

count, the Papenoo stream in flood, its bed nothing but a mass of smooth, slippery, uneven boulders — the rushing waters reaching their chests, they raised the weighty poles with two, sometimes only one hand above their heads, and though time and again swept off their feet and wholly disappearing, pack first, then man rose again to the surface and fought on till the farther shore was gained.

The weather had been fine the whole month so far, but Mateia, “The Pathway of the Rain”, was waiting for us. Sunday night, a three-quarters’ moon had an ominous ring around it, and before daylight came, rain began to fall. The clouds lay low and heavy in the mountains, but it was not in us to cry halt. We two were game; the men smiled grimly, nor showed desire to quit. Let it rain! And Nature took us at our word and showed what it could do. We saw no glimpse of sun for four days; it poured ceaselessly day and night. On Friday, fitful glimpses were granted us in the afternoon, and as Saturday wore on, and Nature saw us undefeated, it gave up the fight and five bedraggled, soaked and ragged-footed men walked into Papenoo under the first real warmth of the week. We completed what we had begun. But why begin such foolish thing, when grey hairs call for Resting! Because some there are who refuse to grow old. The Spirit of Enterprise is the Spirit of Youth, that ceased to be called upon, Age soon enfeebles. Youth and manhood dares; why not full Age?

In this fine tramp, brimful of interest, it was not the raging waters nor wet clothes for a week, with bed of sopping ground or bracken, blanketless, where lay the real danger, but in injury to ankle or limb through needless haste, or scratch of the poison lantana as one heedlessly forced one’s way through the undergrowth. I made it plain — as in all adventures of late years — that my strength must be the common denominator all the way, my pace the rate of progress. We came through entirely unharmed, a bit footsore that was all, for river beds, mile upon mile, of boulders are not cement paved roads — and boots were out of the question. We, in tennis shoes; the natives, shoeless, their calloused feet seemingly impervious to feeling. Yet at the last, they produced from those kerosene cans sandals of rags, which they strapped on with bark. I gathered that it was to give them surer footing in the riverbed, but for all that they went right under like ourselves.

The Vaihiria River at our start — with its 69 crossings, none above the waistline — was a bagatelle, the trail clear and largely free of obstruction, though we were in the woods from the very first. A gradual ascent of 1,400 feet brought us to the Lake, a fairly circular half-mile sheet of water in length and a third of a mile in breadth, lying amid entrancing mountains, from the heights of which half a hundred waterfalls were cascading. There is no visible outlet to this lake, the water escaping underground for some distance, whence issuing it forms the river. There is also no defined shoreline, a long waist-high grass grows right to the water’s edge, and the only shelter we could find for a snack was a rock formation which one might, with a stretch of imagination, call a Cave.

Our immediate business was the construction of rafts, not for ourselves, but for our goods. Four of these were made by cutting down the trunks of the wild banana, known as Fei. (The fruit is a vegetable, never eaten raw, but baked.) Eight-foot lengths were joined, four together, by means of pegs, easily driven through the soft pulp by aid of a stone. Two uprights with forks were driven into the top of each raft, with a cross beam in the forks to which our packs were firmly bound, and such clothing as we chose to discard. Three of these rafts having pushed off, the swimmers took their position behind them, holding and pushing the raft before them with their hands, the means of propulsion their feet. The fourth raft, we noticed, held nothing, and I found it was to be mine. Those men would not allow me to go alone for the water is always deadly cold and, as they said, Age is liable to cramp, so myself at one side and Tainoa at the other, each holding on to a peg by one hand, we used the other and our feet as oars. McComish spurned a raft, game to the core and, alone, he swam the chilly waters. The journey was naturally slow, but the strange fleet made shore at last. Beating warmth into our bodies, we headed towards the Divide, following up a strongly rushing stream coming from that direction, and eight hours from the start, made Camp for the fast approaching

night. A limited space a few feet above a miniature cataract was cleared of small growth and a lean-to hastily constructed of such timber as could be found, the leaves of handy Fei — no coconut to be seen — laid on as roofing, and beneath this shelter we got a small fire going, boiled our water in one of the kerosene cans, had supper and lay down on ground and leaves soaking wet, our heads and trunks protected, but our legs in the deluge for our only timber was short of length.

We had hoped to have seen the strange fish of the lake, but to do so we should have had to camp and await their pleasure. It is an eel and nature has provided its food in the shape of shrimps. From the peculiar formation of its fins, which, as broad as a man's hands, lie close to its mouth, it is known as the Ear Eel. It is a sluggish creature. Natives secure it not with hook and line, but walking round the edge, the eel is to be seen lying lazily in the grass, its head out of water. It is easily secured with a hooked stick. With a measurement of four feet and a girth of nigh a foot, it is a toothsome dainty to natives. It has never been known to attack the pedal extremities of a swimmer, of which we two white men were glad to hear.

## II

Breakfast over, we made for the Divide, a sort of shoulder 2,800 feet above sea level between two towering peaks. It was a stiff climb in spots, the so-called 'trail' being little else than a mud slide. By noon we had made it, for the huge knives of the natives had often to slowly cut a path so rapidly does the undergrowth spring up, and we stood looking down upon the headwaters of the Papenoo, with the mighty Orohena mountain to our left, its towering summit hidden in the rain clouds. We found the descent a tricky proposition in places, and reaching one of the huge swamps which are designated as the Central Plateau, we wallowed in mud up to our knees. Owing to the numerous wild cattle trails, our men here got off the line and we spent till late in the afternoon endeavouring to find the way to a further and still more precipitous drop to the right fork of the river. There was nothing for it but to make camp in the swamp, and this we did, finding a slight elevation with an adorable orange tree laden with fruit. No Fei, no Palm. Again a lean-to with such cover as any old leaves afforded. We kept a fire going the whole night long.

With break of day, two of the men went off to find that trail and striking it where clear, traced it back to find that we were camped upon it. Once again we plunged into the morass, at last reached solid ground, dropped hundreds of feet in no time, struck the Fork and with it the "Upper Cave". Here the last white man this way, willfully determining to cross alone, lay injured, waiting till help might come, and foreseeing death scratched a last message to his sister in Papeete on a kerosene can lying handy. That same can we handled, the writing marks we saw, but the wording undecipherable. He was saved from Papenoo. The Cave is a dry one, of two fairly roomy departments, the haunt of wild pigs. Its shelter was inviting from the steady downpour, but we were behind time and pressed on to the "Lower Cave", less comfortable, we had been told, but nearer to our goal. Now crossings began and fifteen times we forded a steadily deepening stream before we reached our camping ground, where another fork joins, thus forming the Pua tributary, here so fierce a current and of such depth that the men declared that even did we desire to go further that day, the thing was quite impossible, for progress meant a crossing, the side we were on blocked by impassable rock. So under Mount Mauru's spur we halted for our third night.

That Lower Cave may be delightful in fine weather, but as a cave and shelter in bad weather, it is a mockery. The roof drips, not in spots, but over every foot of it, its floor soaked; there was not a dry spot therein. To keep the rain from driving in, the men built a lean-to at the entrance. For mattresses,

they found fern. A good fire was now impossible; all wood was soaked, but happily a couple of fallen orange tree trunks were hit upon, which gave a blaze, and saved us from being smoked out. We slept well, and at daybreak, stepping to the tributary's edge, the decision was "Impossible". It was not a stream; it was a cataract. We were marooned, yet this day should have seen us in Papenoo and home. We hugged the cave, ate sparingly, smoked the same, chatted in four languages, and as darkness at length fell, did our best to sleep the long night away. So went our fourth night.

Once again at the water's side, the evidence was overwhelming that none but those with wings could cross. We were most certainly not going to retrace our steps, so 'rationed' ourselves. Matches were still plentiful and dry, tobacco very low. Tehea disappeared for hours, returning with a godsend. He had found a bearing orange tree and brought a sack load home, together with three fallen coconuts. Those nuts were both old and strong of scent, but they certainly helped out. Fei does not thrive so high up the mountainsides. That afternoon we saw the sun, and the rain became a drizzle. It did not rain that fifth night, and we rose determined to fight rather than to starve, for our breakfast left our cupboard almost bare.

The sky was sullen, giving way, however, only in slight showers. The tributary had fallen, yet when having packed and bidden a glad farewell to our prison house of three nights and two days, and we reached where we must cross, those natives stood long and talked. They seemed to hesitate. We feared an order to return. It is nonsense for white men to think they know better than natives the ways and secrets of their homeland, where'er it be. But no. They turned and said, "We will put you through to Papenoo if you dare venture it or drown in the attempt." Of course, we dared. Then into the raging stream strode the powerful Tainoa and, with pack above his head, began fighting his way. Now the water was up to his shoulders, now he disappeared, but his pack was to be seen, now far below he reappeared and, gaining his feet, stood on the farther shore. Returning opposite to us, he unwound a rope, all too short, but just sufficient to stretch across the deepest part of the river's bed. Tehea now strode down the bank and into the stream and, catching the loose end of the rope, drew it taut. They hailed us to come out to them. Each of us in turn plunged in, and, reaching Tehea, grasped the rope with one hand whilst with the other we swam, passing hand over hand till we reached shore. Discarding the rope, Tehea and Te followed with their packs, each disappearing, but winning out. For one passage later in the day, that rope came into play again; that was where the tributary met the river proper and there was a very proper tumult of waters. The rest of the crossings were made by hand. Not one would they allow me to make alone. McComish made several, but only when they felt sure that it was in his power; his is a powerful and athletic frame. Having crossed themselves with their packs, two (or one for me alone) would return. Locking our left arm under their right, and fingers interlocked we fought our way across together. Time and again we were under and being swept down, but rose together, swimming, landing always far below our hoped for spot. It was a splendid tussle every time, and all that day it lasted, and all done upon a breakfast of two small biscuits, a cup of tea and oranges.

As the Papenoo broadened out, the depth slowly lessened and the last crossing was only chest deep. Twice we escaped a fording by clambering along the mountain edge which hemmed in the river. It was not easy, but here the men said the river was too much for them, too deep and swift, with a deadly undercurrent. Tired those men must have been — indeed, they owed to it when all was over — but there was no let up to them. They said they would land us in Papenoo that day and they were not going to fail. When occasionally we struck a piece of goodly trail through bamboo bottom lands as we made from ford to ford, we made fast time. A jog trot was delightful after the chill of the river. But not even chill could dampen the ardour of those men. On that gruelling day for them, towards the end, espying an eel in a back wash, they counted it as provender not to be refused. Dropping their loads, they attacked it with their great knives and nigh decapitated it. It was a huge thing and weighty, yet Tehea added it to his load with glee, to bear to his home as a Sabbath tit-bit for him and his.

The Papenoo winds about like a serpent; there seemed no end to its turns, but every turn opened out new beauty. For all the care as to foothold on the stretches of the oft low banks we walked, I missed little of the scenery, especially when the sun at last shone upon us and all was clear to the very summits of the mountains. Waterfalls everywhere, some with straight fall, others taking leap after leap. An artist or photographer would be entranced. Central Tahiti and the valley of the Papenoo are a lovely to the eye, but locked fast by Nature, to be opened only by the adventurous and the strong. Yet once, in long past time, the lower reaches of that valley must have teemed with human life, for where the Pua and the main stream meet are the remains of a marae known as Mariūti, its stones still largely in place. Here was a Chief's Council Place and where the god of those waters was pacified by human sacrifice when flood and danger threatened.

As that strenuous day wore on to a close, Tehea told us that there were but four more crossings and an hour would bring us to the sea. Here then we rested, and divided between us every atom of our remaining 'grub', together with the last pinch of my tobacco. Thus refreshed, we pushed on, and soon plunged in, now but three; close to, another, now but two; hardly our breath again, when another, now but one; that last, the 44<sup>th</sup>, we went through with a whoop. Now a fine trail, the end in sight. We clipped that last mile off in good shape, turned into Papenoo, and made straight for Chief Terii-rōō's<sup>122</sup> home. To the villagers, we looked a sorry sight. They could not believe that we had come through. The Chief — a big, cheery fellow — could not do enough for us. Into his best room we were ushered, drying towels were given us, strong drink poured down our throats, bowls of tea, fresh meat and bread placed before us. Then — myself wrapped in that Chief's great coat, a thing for Arctic weather — he put all five of us into his fine auto and, heading fast for Papeete, landed us by 7 p.m. at the Diademe<sup>123</sup> — my Home — where host and hostess overwhelmed us with attention. We had won — despite the Rain and River.

## Raiatea

There ever are surprizes in store for the visitor to the South Sea. Making Uturoa, on Raiatea, my headquarters for the Island, I rented a shack of one room with an appendix behind, with no close neighbours. It stands on piles, since swamp land surrounds it. My residence was not extensively furnished, a bed full-sized, with a feather mattress well suited for northern Europe, one chair, a round table and a wash stand. What more could one want? I had brought my own looking glass and hooks for my apparel.

I was alone, at least I thought so, but there I was wholly wrong. It was possibly a Raiatean Welcome, and if so I was most ungracious for I sat down hard upon it. Returning the first night from a stroll beneath a glorious full moon, I found five mats and five pillows upon the floor, and upon each, a Sleeping Beauty wrapped in a counterpane.<sup>124</sup> I hated to disturb them, nor did I think myself capable of withstanding the assault of five strong armed Raiatean women, with no help near. Raiatea has an ugly name for tragedies. So I let them lie. Ere I fell asleep, one broke out into a distinctly consumptive cough, whilst another snored. I longed to heave something at the latter, but forebore lest the five

<sup>124</sup> *Archaic*: a bedspread

should arise to retaliate. When I awoke, the mats and pillows were there, but my brown-skinned damsels had gone.

I was out all day. Upon my return at eventide, it was evident that the performance was to be repeated. Though late, I sought out my landlord. It was no easy matter to make him understand in a foreign tongue that his choice lay between the ladies and myself. I cared not which. I took my late night stroll. When I returned, the mats, the pillows and their owners were gone. I was left for the rest of my stay severely alone. Doubtless I lost cast and character as a real white man — a forbidding and surely Recluse, but no matter; better that than a free fight, five to one.

The main product of the Sous le Vents is copra; the coconut plantations are endless, in the main hugging the coast, but there are on Raiatea countless orange trees. Some six miles out of Uturoa, I strolled up a valley broad and long which seemed one vast orange grove, and the season was on, a wonderful sight with the golden fruit all round. The pineapples of this island are also famous, the market of Papeete glutted with them at one penny apiece and even cheaper ere they spoil. Wherever I roamed, and I covered many miles a day, there was fruit of one kind or another on every hand. Vanilla and Cotton were once to the fore, but these have fallen upon bad times. But apart from Fruit, Raiatea makes some mighty claims for itself.

Its people of old held it to be the site where the first man and woman of their known world appeared. Its Chiefs were considered the be greater than all other Chiefs, and War was their pastime. Tahaa, the island within the same reef, was ever a bone of contention between Raiatea and Pora Pora. It was as near one as the other. Across the water on the other side of Tahaa lay Huahine and the Huahines were ever fighters. The defeated parties fled from one island to another for shelter; some at last made up their minds to quit the Group altogether, and in their sea-going canoes set sail following the annual migration of birds southwards bound, not knowing nor caring much whither they were led so long as they could escape from islands which ran with blood. Thus comes about the second claim.

Raiatea holds that it was from their island that the great Migration of the Maoris — New Zealand's warrior nation — took place. Hawaii-iki — the Distant Land of Spirits — is a much disputed land. Such without doubt was the Maoris' original Home. The truth seems to be that there was more than just one Hawaii-iki, just as there were undoubtedly separate arrivals of the Maoris, years apart. Hawaii claims it; Savaii, Samoa, claims it; Raiatea also steps in, pointing out that the great settlement round Opoa — Oro's home, he the God of War for Central Polynesia — was known formerly as Hawaii, but that the facial resemblance, the rich auburn hair not infrequently to be seen, the names of folk and places, the customs and the mythology all go to prove their claim. And so with the rest of the claimants. They all have measure of Truth. Raiatea has had its day, but takes great pride in the fact that another and a greater Clan has at least in part sprung from it. The Spirit in each was the same. The Maoris long disputed Authority with our own nation, nor did the Raiateans less quietly acquiesce as to the domination of the French, and this the record thereof.

When Tahiti in 1842 yielded to the 'force majeure' — Britain proving but a broken reed in the hour of need — the Sous le Vents were excepted, after actual fighting and prolonged correspondence between London and Paris, whilst each Island's Ruler emphatically stated their rights, with Queen Pomare <sup>125</sup> to support them. <sup>126</sup> She writes to Commander Hamond, <sup>127</sup> "I now make known to you the proper boundaries of my kingdom and of my sovereignty as they descended from my ancestors. Moorea is one and Tahiti, and a small island, Tuhuaiaone (Tetiaroa) and Meetu (Mehetia) have

---

<sup>125</sup> [Pōmare IV \(1813–1877\)](#)

<sup>126</sup> See *The Independence of the Leeward Islands* in Part IX, *Old Time Tahiti*.

<sup>127</sup> [Graham Eden Hamond \(1779–1862\)](#)

descended from time immemorial down to me. But my kingdom and my sovereignty have never come to those islands. They have continued to be sovereigns over their own lands from time immemorial: Teriitaria of Huahine,<sup>128</sup> Tamatoa of Raiatea,<sup>129</sup> Teriimaevaua of Pora Pora”<sup>130</sup> — today the Sovereigns.

And Tamoa, King of Raiatea, writes to Admiral Seymour,<sup>131</sup> “My kingdom is distinct. It has been communicated to me from the days of my forefathers. My desire is that I may retain my own government as it descended to me from of Old,” whilst to the same Admiral, Tapoa, King of Pora Pora, writes, “Our governments were never included in the Tahitian. We are the hereditary sovereigns over our islands. We were never under one sovereign or formed into one government.” Teriitaria, Queen of Huahine, takes the same stand.

It was to Raiatea that Queen Pomare IV fled from the French on Tahiti in July 1844, remaining there till her sovereignty was restored in 1847, Bruat,<sup>132</sup> on her refusal to return, proclaiming a Blockade of the island, which was carried out effectively, whilst the question of the independence of the Group was being discussed between Paris and London.

Tahitoe<sup>133</sup> of Raiatea, later on, lost his ‘throne’ because of his readiness to accede to the further French demands of 1880, his position being given to his more loyal daughter, Hauroaarii;<sup>134</sup> and Huahine showed so stout a front for independence from the first that Britain, confirmed of the justness of their plea, did at last insist that France should keep its hands off. In 1847, a Declaration was signed at London between the two European governments, both acknowledging the entire independence of the Leeward Isles or Sous le Vent Group. They engaged reciprocally ‘never’ to take possession of any of them, either absolutely or by way of a Protectorate or in any other form. This Declaration remained, for forty years, a constant source of offence to France. Britain steadily refused to abrogate it.

In 1858, the United States Consul at Tahiti<sup>135</sup> took steps on his own responsibility to gain control, but his action was disallowed by his superiors at Washington.

In 1870, Germany tried its hand, but this also failed. Copy of proposed Treaty made by the Captain (Reinshards) of the *Bismarck* <sup>136</sup> during the month of April 1879; Tahitian text sent by J. L. Green <sup>137</sup> of Raiatea to the British Consul on Tahiti:

1. The peace between the Government of Germany and the Government of Raiatea and Tahaa be maintained forever.
2. That German ships of war be allowed to anchor at any port or other place at Raiatea or Tahaa, to take in water, to purchase food, or to repair ship if damaged, in accordance with the law of the land. That German merchant ships be permitted to enter any port opened by the law of the land and that they be allowed to transact business alike with foreigners and with natives without restriction, but no spirits shall be sold.
3. That no new additional charges be laid upon ships which may call at the ports, but the charges now in existence shall be respected.
4. That German subjects shall not be maltreated, but they shall enjoy the privileges accorded to subjects of every other nation.
5. That if any German sailor shall abscond from the ship, such sailor shall be sought for and his captain pay the expenses.
6. That no German subject shall be banished for any crime until the German Consul or his representative shall have heard the charge brought against him in the Court, and then the Consul or his representative shall, with the Judge, decide the case.

Note. The Treaty with Huahine was exactly similar, but Article 6 concluded with:

This Treaty is in force from this date  
Huahine, the 28<sup>th</sup> of April of the year 1879

Signed

In 1880, with Tahiti, at long last, itself a read French Colony through Pomare V <sup>139</sup> handing over Sovereignty, some of the Chiefs on Raiatea, Tahitoe leading, weakened and asked for a Protectorate. Britain at once protested and the Raiatean Flag still flew at Uturoa, with a change from King to Queen as noted above. But the French would not let the matter rest. They had from the first grounded their claim that with Tahiti went the Sous le Vents on a misunderstanding. On a visit paid by Pomare II, <sup>140</sup> the first king of Tahiti to Raiatea, after formal presentation of food, Tamatoa, the king, through his speaker, addressed him as follows: “We present to you the island, the landed proprietors, the food, the water, the women and the children.” The sworn testimony of Matatore, a High Chief present, says “It was an old custom of ours to pay such a compliment to a great chief when he paid a visit... It was only a custom; it was not giving up the sovereignty, only a compliment to a royal visitor.” And so with the other islands of the Group, who had acted similarly to Pomare.

It was not until May 1888 that Britain weakened, the Declaration of London was abrogated and France extended her sovereignty over the Group — but not without a long, drawn out fight, and bloodshed here as well as on Huahine. It took till 1897 to see the end. The English cannot be wholly blamed for abrogating the London Treaty. When this arrangement put an end to the violent methods of obtaining the sovereignty of the Leeward Islands by the French, based on a claim which both Louis Philippe, <sup>141</sup> with his advisors, and England saw was quite untenable, it would appear that they proceeded on another tack. They infiltrated the Group with French friendship shown in various ways till they won over as friends many once their opponents, who slowly became the “French Party”. These and the Patriots naturally disagreed. The cleft between the two grew steadily wider and the French saw to it that it was not lessened. Friction increased to such an extent that the French claimed it a duty to give aid to their friends. It steadily became a complete upsetting of the Group and chaos reigned. Now was France’s opportunity. England learned that things were growing impossible and intolerable, part for the French, part violently against. To hold to the Treaty meant continued unrest. The only thing to do — unless armed intervention was undertaken to keep the Frenchmen off — was to leave the matter to France to settle as best they could. The friendship tack had succeeded; the “French Party” had proved to be the lever as intended to the securing of the Sovereignty. France’s hands were free.

And this of Raiatea. Once French hands were free, the Governor at Tahiti took action, sending three men-of-war to the islands of the group. Those who, in 1880, had expressed willingness for a French Protectorate had long had their centre at Uturoa under Queen Haū-roa-arii who had conformed and so kept her post with the Party, whilst the Patriots — or as the French called them, the “Rebels” — had long had their headquarters a short distance away, round the coast at Avera. Here they had a rival

Queen Tu-arii, under the leadership of a Chief named Te-rau-poo.<sup>142</sup> They flew the Raiatean Flag and had handy the Union Jack, just as the Uturoans had the Tricolor. It was necessary to acquaint the Patriots, Rebels (or Teraupists) of the fact that England could no longer be relied upon and the task fell by request of the French to the British Consul, and the Acting British Consul Brander<sup>143</sup> (Interpreter) on Tahiti. Carried over, he was allowed to land at Avera for a meeting. The news was a blow, but their resolution was unshaken, even to fighting — a handful of natives armed with a few ancient muskets and shotguns; powder they had, but a poor supply of bullets, so would make up the deficiency with stones and nails — they against a mighty nation; there could be no compromise. The French long held back and things dragged on under various governors till in 1896 it was decided to make an end of opposition, cost what lives it may. Once again the men-of-war were at Uturoa. Notices were broadcast that on the first day of January 1897, hostilities would commence unless submission was rendered by all malcontents of any of the islands, and non-combatants were advised to leave all rebel villages.

Though the Land they had relied upon had deserted them, Teraupoo and his adherents could not grasp that its Flag would fail to be their shield and defence, so ran up the Union Jack on Avera's wharf in defiance of the Tricolor. Round from Uturoa came the French men-of-war and the first cannon shot brought Flag and Flagstaff down. Already Queen, women and children had abandoned the village, and bombardment soon fired the native homes, the rebels retiring to the hills at the back. Forces were landed and an attempt made to sweep the Island for all malcontents, despite the forest which covers it. Trench work soon showed that Teraupoo had prepared for eventualities, and soon after, on the west coast at Tevaitoa, they were fired upon from an ambush. The aim was poor, not a Frenchman fell, whilst returning the volleys slew a dozen and wounded as many more. Teraupoo escaped.

Working round the island, it was gleaned from a native that the Chiefess of Tevaitoa, with a number of adherents, were encamped at the head of the Vaiaau Valley. Sending a large party of armed Uturoan natives up the trail from its foot, the French deployed so as to descend from its head. At break of day, they were in position to charge the group of dwellings. It had rained all night and was still falling relentlessly. With a rush, the French surrounded the native homes, thinking to catch their quarry sheltering within from the rain. They found not a soul. Nonplussed, they made down the valley to be

met by the upgoing force, who reported that they had reached the objective first, had captured the lot and had them all safely bound up in the woods nearby. Tevaitoa's Chiefess and all were indeed tied up, hands behind their backs and elbows almost touching with extra bands. Promising no escape, the woman was released from such torture with a few others.

But Teraupoo was still at large. Finally he was betrayed and secured, without a fight, at another village far from Avera; his sentence, and that of several others, Deportation to New Caledonia. Tuarii, the Queen, submitting, was pensioned till her death in 1911. So ended the unequal contest, and Raiatea became a French Colony. In 1906, Teraupoo, and the others exiled, returned to their homes.<sup>144</sup>

Taūtu's doings (a full century before) are noted under Pora Pora. He was the Kamehameha of the Sous le Vents, aiming at Paramouncy and gaining it as did his Hawaiian Compeer. He rose to power in Captain Cook's time, 1770, and founded the line of the Tamatoas. The eldest daughter of Tamatoa III,<sup>145</sup> Tetupaia-i-hauviri, married Ha'apai, the Chief of Pare, and was the mother of the first Pomare.<sup>146</sup> Terito, the second daughter of Tamatoa IV, married the second Pomare and was the mother of Aimata Queen Pomare,<sup>147</sup> whose son, Tamatoa, succeeded as Tamatoa V,<sup>148</sup> but considering himself above all law, the Raiateans had enough of him and sent him home.<sup>149</sup> Next came Tahitoe, who, as noted, lost his position, being followed by his daughter, Haū-roa-arii, who left no issue. Through marriage there was a Prince of Huahine named Ariimate<sup>150</sup> with legitimate rights on Raiatea, being the great-grandson of Tamatoa IV. He took the first Tamatoa's full name as Tamatoa Taūtū, being the last Tamatoa. In 1888, with France granted a free hand, he returned to Huahine, Queen Tuarii succeeding, but only in name, with the Patriot party behind her, Tavana of Tahaa acting as governor for the French<sup>151</sup> till 1898 — when the Patriots had been crushed and a Frenchman appointed. His death in 1906 found him as Chief of the District of Uturoa. The days of Raiatean Kings and Queens were ended.<sup>152</sup>

The once famous Taputapuatea marae of Oro, with its lesser attendant maraes, at Opoa, once Hawaii, is best reached by water. It is but a ruin of its former high estate. It is opposite the Pass used coming from Huahine to Uturoa and is on a neck of land jutting out into the lagoon. The large flat with mountains at the back is today covered with coconut trees, but there is much that remains of the most important of all maraes in Central Polynesia. It would take but little trouble to put it in large measure of repair, but seemingly it appeals to none in Authority; the approaching platforms still stand unwrecked; the "crowning" or "investiture" column, the main platform and the "seats of the mighty" around its high raised sides, the same. Approaching from the sea, one lands on a sandy, shelving beach and at once there comes a platform 104 feet long, 11 feet wide and 3 feet 6 inches high. Back of it, lying flat, is the Altar of Sacrifice, broad atop for the already slain victims, man or beast, to be laid on. A short distance along the shore, another platform 30 yards in length and 3 feet high is seen. Back of this rises, 9 feet high, a squared coral column on the summit of which sat him or her who was there installed as High Chief. Back some 30 paces, there rises the main coral parallelogram, raised 6 feet high, a platform with room for hundreds to stand upon, 140 feet by 24 feet, whilst scattered here and there a short distance from the longer sides are coral slabs sunk in the ground like

gravestone heads, against which Chiefs in squatting attitude leaned their backs whilst ceremonies were being carried through on the platform above. The end of the marae's power came with the triumph of Christianity in the 1820s, though paganism still held with a moiety and the High Priest of Oro's shrine was still looked upon with awe and reverence. The last to hold this great position was an aged man, grown up from youth in the service of the gods and, alike with his predecessors, considered invulnerable against all dangers. When in 1830, the Raiateans engaged in the battle of Hooroto with the combined warriors of Huahine, Tahaa and Pora Pora, he insisted upon his right to pass in and out among the combatants. Spears were one thing, muskets quite another. In the fight, a bullet struck and killed him. So ended the High Priesthood of Opoa.

By natives, it is still held to be sacred ground and to be sacrilege to disturb its soil. Not long after my own visit, an English Doctor stepped ashore and, hunting for relics of the victims of sacrifice, rooted up some of the platform, beneath which countless skulls are reputed still to lie, securing what he sought. He bore them off to his boat in triumph, but native eyes had seen the sacrilege. Soon after, a bunch of Raiateans gathered at Papeete to give an exhibition of Fire Walking at which they are adept and famous. Some white folk sought leave to follow suit. To all but one bystander the Leader said Go and covered each one's walk with cabalistic words, but to one he refused. It was that Doctor; he insisted; the Leader warned that he would do so at his peril. The Doctor stepped upon the red hot stones and would have fallen full length had not the natives rushed to his aid. He left Tahiti a cripple, though happily not for life. They say that Oro's curse was on him, and what shall we say in reply? <sup>153</sup>

### Huahine

Huahine is a twelve-hour run from Tahiti and is always a night journey. Papeete is left at 5 p.m. and the harbour of Faré is reached by 5 a.m. The schooner that bore me was unworthy of any name or title, save a Washout. Loaded, it had but 18 inches of freeboard, no sleeping accommodation. True, it had power, but there was no escape from the fumes; the heavens were opened wide; it rained without ceasing; and there was no awning. The passengers sat in the tiny stern on kerosene cans, drenched to the skin, with water always up to one's ankles. The cargo — and much of it had been crowded out of the hold — was tarpaulined and strapped, else we had either turned turtle or foundered since the waves swept gaily from prow to stern. Sleep was impossible and talk difficult against the wind, but everything has an end. With daylight, we stepped ashore for morning coffee at a Chinaman's Store and Eating House, feeling fit and fine, nor did ill effects ensue. I would 'rough it' once again and see if the old shell and its inwards were still capable of a jolt or two. It answered the test O.K. There have been many wrecks since then in these waters, but 'Washout' still pegs away as if its life was charmed. Its real name is the *Manaura*, of 32 tons, and is owned by a Chinese Firm in Papeete.

The Island ranks next to Raiatea in importance, both in the Past and the Present. It is in two parts, an isthmus just under water at high tide joining them as one. Faré is the chief harbour and a fine one. From the time of Captain Cook — who first made known the Group and named it (not Tahiti as is generally supposed, which in his day was named King George III Island) the 'Society Islands', after the Royal Society, which had sent him forth — it has been known and frequented by white folk. It was to its capacious harbour at Faré that the whalers came to revictual and repair. When the whales commenced their yearly northern journey from the Antarctic, the whalers followed them up from the south and the ice, and by each May or June, they reached Huahine. They left again for the south in

---

<sup>153</sup> See also Tale #4, *Of Fire Walking*, in Part IV, *Tales of a Roaming Grandfather*.

August as the whales returned. Those were busy months for the natives. It was in the exchanges that these islanders got their longed for guns and powder, which were not long after to be used against the white man. Boats from the distant Hawaiian Islands came south to join in the trading, whilst far larger craft carried off pork, sugarcane and fruit to Sydney and San Francisco.

It was to Huahine that the first missionaries fled for safety from Tahiti and later settled down when they set out to attack Oro's mighty sway, invited this time to do so by Mahine,<sup>154</sup> who then ruled the isle. He had gone to Moorea to assist Pomare II in his final fight with Papara's Chief for Supremacy and there coming in contact with Pomare's new found creed, was impressed. Returning to his island, he and a majority soon accepted Christianity without serious opposition from the remainder. With this start, the new Teaching spread gradually throughout the Group, and paganism abandoned, its maraes were ruthlessly destroyed.

The credulity of these primitive islanders, who first in the Long Ago came in contact with white men, is well evidenced by two Huahinean instances well authenticated.

When Captain Cook returned to the Group in 1774, he brought back with him the young native Teraimano,<sup>155</sup> whom he had taken Home from Pora Pora. Changes of rule (to be noted later) prevented his being placed either on his home isle or Tahaa or Raiatea, so he was put ashore on Huahine. Cook did nothing by halves. He constructed a fine house for the young man and loaded him with gifts, besides those the youth had received when in England. During the construction of the house, the natives stole many nails. These they carried off to the High Priest of the Maeva marae, who sowed them, in the expectation of seeing them grow and multiply. Here was the marae raised to Hiro, their god of Thieves, for theft was as much a part of all as War.

A century later they were as simple. In 1874, some Chinese, who were indentured as laborers on Moorea to a retired Italian officer, got away and landed on Huahine. The law of the island was that if any stranger placed himself under the protection of the island's King, none could touch him. The Captain following the runaways demanded their return. Being refused, he told the King and islanders that he would soon return with other strangers, poisonous snakes, lions, tigers and other man-killing beasts whom they were free to put also under the protection of their King. They surrendered the fugitives, but their King lost his crown.

In the '40s and the '80s, Huahineans showed fight. When, in 1842, the Queen of Tahiti gave in to the French demands of a Protectorate, the latter considered that through her close family relationships to the rulers of the Sous le Vents, that Group was of necessity included. But Teūhe I (Teriitaria),<sup>156</sup> the Queen of Huahine, thought otherwise. And so did Queen Pomare herself. In a Petition to the King of the French, which she sent to him on September 25, 1844, in the midst of her own troubles, she wrote, "I am now residing on the Island of Raiatea; it is not my land now; it never was my land from of old to the present time. Tahaa and Raiatea and Huahine and Pora Pora are different governments and they have different kings, but they are my friends."

---

<sup>154</sup> [Mahine Tamatoa \(1761–1838\)](#)

<sup>155</sup> This would appear to refer to [Mai \(c.1751–1780\)](#), a Raiatean who travelled to England, departing from Huahine on the *Adventure* in September 1773, during Cook's second voyage, and returning to Huahine on the *Resolution* in October 1777, during Cook's third voyage. According to [Ellis, Polynesian Researches, Volume II, Chapter XV \(1833\)](#), Teraimano was one of two persons to whom the land granted to Captain Cook in 1777, for Mai's residence on Huahine, belonged, by right of patrimony.

<sup>156</sup> Teriitaria was also known as Pomare Vahine and Ariipaea Vahine, but no reference to her as *Teūhe I* was found. [Teuhe \(1840–1891\)](#), who reigned from 1888 to 1890, also had the name *Teuhe II*, which suggests that Teriitaria may have been known as *Teūhe* — that is, *Teūhe I* — on Huahine.

And Teriitaria, the Queen, herself writes to Queen Victoria, “Do not allow me to be included in the Protectorate government. I will never consent to it. I had nothing to do with the French Treaty. Do not allow my islands to be given up to the French.” Hers was an independent rule and no mere vassalage of Tahiti. After things had in some measure settled down on Tahiti, the gunboats *Uranie* and *Phaeton* arrived at Faré to force the Protectorate. Both Queen and natives retired to Maeva. The French forces landed and went forward to the attack. There was a clash, victory resting on neither side, the French losing several, both killed and wounded. Before further hostilities, the *Phaeton* was hurriedly recalled to Tahiti, where more trouble had arisen, the *Uranie* under Captain Bonard<sup>157</sup> remaining to administer all the desolation he could safely attain to. Writing with like threats to the Pora Porans, he says, “February 9, 1846. I am now avenging myself on the Huahineans. I am burning their houses. I am chopping down their breadfruit and coconut trees, turning up their potatoes and plucking up their taro.” England then stepped in and the Sous le Vents were left alone, till 1888.

When the Declaration of London was at last abrogated and France given a free hand, Huahine again showed fight. Their Queen Tehaapapa II<sup>158</sup> and many of the leading Chiefs, foreseeing the inevitable, were prepared to agree to annexation, but others refused and placed her daughter Teūhe II as Queen at their head. When the French arrived at Faré, the landing party received a warm reception of powder and shot, and several fell. But the Tricolor was raised ashore, the malcontents retiring, nor were they pursued. With the natives divided in counsel, the French bided their time and matters dragged on for two more years, when the inevitable clash between them came. The supporters of the French, led by their ‘Prime Minister’ Marama,<sup>159</sup> son of the Queen, mastered the malcontents, led by their ‘Prime Minister’ Tau, and he with seven other land their Queen Teūhe II, Marama’s sister, were taken aboard the gunboat stationed in Faré’s harbour for deportation. But there was still fight left among the anti-French. Two months had barely passed when they worsted the French party and made Marama their prisoner. This was, however, the last of their efforts for freedom. The French now made a thorough clean up, securing and exiling to the Marquesas fourteen of the remaining leaders. Huahine submitted in 1890 — Raiatea took a further seven years ere succumbing.

Queen Tehaapapa II, shorn of all power, still lived in her local palace till her death in 1893, when she was succeeded by her granddaughter, one of the children of her son Marama and known as Tehaapapa III.<sup>160</sup> Tired of an empty Royalty, in 1895 the islanders found the French willing to agree to a special arrangement: under the Sovereignty of France, Huahine — and the rest of the Leeward Isles as time went on — should form a Republic. There was to be both French and Native Law established in the Sous le Vents, the former for the French and strangers, the latter for the islanders themselves. They were to be French ‘subjects’, but not French ‘citizens’ with a vote. This is known as the ‘Indigénat’ and is still in force.<sup>161</sup>

The Queen and her leading Chiefs were pensioned; later the exiles were permitted to return; and Huahine, for centuries a battleground, started on a career of Peace.

With this Past in mind, it was a pleasure to set foot upon the island. The pure native atmosphere here, as elsewhere in the Group, has naturally largely passed, but the charming scenery happily remains.

<sup>157</sup> [Louis Adolphe Bonard \(1805–1867\)](#)

<sup>158</sup> [Teha’apapa II \(1824–1893\)](#). WWB has *Tehaapapa I*.

<sup>161</sup> The *Indigénat* remained in force until 1846, when French citizenship was proclaimed for all subjects of French colonies, under the [Loi Lamine Guèye](#).

## Pora Pora

Pora Pora — one old time name of which is Fa-a-nui (great valley), another being Vavau — is by legend held to be the First born, being the first island that sprang up from the deep after the Creation by the Gods of ‘Hawaii’, present day Raiatea. It has but one good entrance through its encircling Barrier Reef, which leads into a fine and spacious harbour. Here lies Vaitape, the main village. The island’s fantastically shaped Mount Tai-manu rises nigh 2400 feet, a shattered crater, and has been the admiration of countless travellers since Cook first looked upon it. Gently sloping hills range from it to the sea.

On the Navigator’s arrival, hearing the natives calling out on every hand in their excitement, “Apooraa, Apooraa,” meaning ‘Gather, gather’, he took it instead to be the name of the island and writing it down in his Journal as near as he could to its sound, produced ‘Bola Bola’. Since in Tahitian there is neither B nor L, this, later, became more correctly ‘Pora Pora’, though still far from Fa-a-nui and its other ancient names of Vavaū and Vaūvaū. Still later, white men turned it into ‘Bora Bora’, to the disgust of all intelligent natives and white folk.

Though the island is small, Cook found two Families or Clans dividing the government — the Mai and the Puni. He became so friendly with the former that he took one of that family, a young man by name Teraimano, to England, as already noted.<sup>162</sup> Soon after he left, there was heavy trouble in the bellicose Sous le Vents.

An ambitious young native, Tautu, was living on Raiatea. He was of the Oro Family, whence came the High Priests of Opoa. He gathered his young friends together and proposed to sally forth on conquest bent. More power was his aim and that, at first, lay across the water. Too weak in numbers, he sought alliance with other Raiatean Chiefs to increase his force. For this purpose, he and his started out in a flotilla of canoes, and made a tour of Raiatea. At each place of call, he beat the War Drum, but his hopes failed, no district Chief welcomed him, none joined him. He pushed across to Tahaa, with no better success. Here, none offering him either food or shelter, he made camp on a small islet off the isle, called today by his name. He forgot no refusal.

From Tahaa, he crossed to Pora Pora, landing at the village of Anaū, where the Mai Clan dwelt; they turned a deaf ear to his war drum. At Vaitape, where other Mai dwelt opposite the Pass, it was the same. Far from discouraged, he pushed on around the coast to where the Puni clan held sway. There was ever rivalry and bad blood between the two governments and at the marae Maro-ti-teni, Tautu’s request for alliance and aid was formally sworn to. The battle was joined, the Mais defeated and driven off the island. The Victors now turned their attention upon Tahaa. Those natives called upon Raiatea for aid. It was rushed, but at Murifenūa a clear victory was gained by the young adventurer and his ally. Puni became sole King of Pora Pora, and Tautu, King of Tahaa and the island from which he started.<sup>163</sup>

Therefore, when Cook reappeared to return his native protégée, he found it impossible to land him on Pora Pora — all the Mai clan were gone — neither could he land him on Raiatea or Tahaa. He left him on Huahine, as before noted. It is to be regretted that this young man did not turn out well. Travel and the fuss made over him in England, from the King down, had turned his head. The Missionaries

---

<sup>162</sup> WWB has confused Teraimano with Mai, who departed for England from Huahine, not Bora Bora. See the footnote above under *Huahine*.

<sup>163</sup> For Puni, see [here](#). These kingships precede those presented on Wikipedia [here](#), which, for Raiatea and Bora Bora, commence in 1821. See also, for Raiatea, [here](#) and [here](#), and, for Bora Bora, [here](#).

found him more than a handful. It was not long before he ‘went native’ again, as might well have been expected.

This island, for a change, made no serious resistance to the demands of the French, the natives after Murifenūa had had enough of war; they left the serious protesting and the fighting to the larger islands in the Group. But they had not wholly escaped. The island was divided in counsel as to the Protectorate, the King, Tapoa,<sup>164</sup> against it. He forbade the French partizans gathering food or catching fish on that side of Pora Pora on which he lived. The French Captain Bonard came at once upon the scene and demanded a deposit of 600 Dollars as a pledge for good behaviour, which, realizing their helplessness, was handed over under protest, and Tapoa retired to Raiatea. During the respite afforded by the Declaration of London, the Queenship was held by the only daughter of Queen Pomare of Tahiti, her father<sup>165</sup> being a prince of Raiatea. She had been named Queen to be when but six years old, as the then reigning king, Tapoa, a native of the island and a former husband of Queen Pomare, had no issue of his own. The succession therefore was as follows. Puni had been succeeded by a daughter, Tehea, but in 1830, Tamatoa II, at the battle of Hooroto, despite the assistance of Huahine, gained the overlordship of Pora Pora; it was a vassal of Raiatea to be disposed of as seen fit and Tapoa had been named its king. Teriimaevaua I,<sup>166</sup> having herself no issue, adopted her niece of the same name, the daughter of her brother Tamatoa V, who, as noted, was sent home by his Raiatean subjects, and she followed as Queen Teriimaevaua II.<sup>167</sup> In 1888, upon the abrogation of the Declaration of London, she retired to Tahiti, leaving the French a free hand on the little isle.

Without doubt, Pora Pora is the gem of the Sous le Vents. The towering rugged Cone rises like a pinnacle in its midst. Artists rave over it; camera men and women never tire of snapping it from every angle. It has been and again and again will be the setting for movies of Life in the ‘South Sea’. Its natives are of necessity largely spoiled by the attention paid the island. Tourists flock there for a flying visit from Papeete on Tahiti, others for a more prolonged stay. The great shipping Lines carrying globetrotters list it in their tour of these waters as a special attraction, whilst the men-of-war of all nations never fail to make it a port of call.

Standing on the wharf at Uturoa on Raiatea, full twenty miles away, it is the climax of the panorama; Huahine to one side, Tahaa straight ahead and Pora Pora on the other hand. Given a clear sky and a blazing sun, they lie in an azure sea, each rimmed in by Barrier reefs over which the frothy combers curl and break, the mountainsides a mass of green. They are good to look upon, better still to go afoot and wander in alone. Nature is good company.

## Tahaa

Tahaa lies within the same Barrier Reef as Raiatea. It is well worth visiting, but not for any long residence as it has an unenviable reputation for elephantiasis, that ghastly affliction seen so frequently in the lone and far-flung Tropic Islands of the ‘South Sea’. Cold it cannot stand. None can, as yet, surely say how it comes upon its victim;<sup>168</sup> no sure cure, as yet, has been found for it, despite ceaseless

<sup>166</sup> [Teari'i-maeva-rua I \(1841–1873\)](#) . Wikipedia has *Teriimaevaua II*. [This source](#) supports WWB's genealogy.

<sup>167</sup> [Teari'i-maeva-rua II \(1871–1932\)](#). Wikipedia has *Teriimaevaua III*.

<sup>168</sup> [Elephantiasis](#) , known as Féfé in Polynesia, occurs in the presence of microscopic, thread-like parasitic worms, all of which are transmitted by mosquitoes.

effort. It chooses whom it will, white folk and native alike, men in the main. I have seen a thousand cases in my wandering in this Great Sea, men and women, but never a child. Women can hide the hideous deformity, but men can never do so. I stayed not overlong on Tahaa; why take chances with a healthy body?

The island is much cut up by bays which are extremely picturesque. From the village of Tiva, there is a specially striking view of Pora Pora's shapely Cone, which lies directly opposite, some dozen miles away. In this weird village, a wealthy French Count <sup>169</sup> lived spasmodically till he died, quite lately since my visit, <sup>170</sup> whose chief pastime was wild pig hunting. I saw the many trophies in his home and his kennels of dogs. They were a motley crowd.

On Tahaa, as everywhere else in the Group, the Chinese are ubiquitous; the natives seem lost among their numbers. They are, of course, the workers, the natives naturally indolent. There is a population of 8,500 in the Group, but the number of pure native is dishearteningly small.

There is no direct steamer service to Tahaa, but native sailing boats, launches and canoes make frequent passage between Uturoa and the various ports of the island.

It has been seen that Tahaa was for long years a bone of contention between Raiatea and Pora Pora. Its fate is settled now.

## The Atolls

The Atolls of the Group lie far scattered to the west by north.

## Tupai

This Atoll, handiest to Pora Pora, is leased to Papeete white folk as a coconut plantation. It was, not so long ago, the scene of a Treasure Hunt. According to rumour, Admiral Von Spee, <sup>171</sup> in 1914, after

---

<sup>169</sup> [Octave Morillot \(1878–1931\)](#). WWB does not mention that he was also an artist; see [Octave Morillot: peintre de la Polynésie](#), by Norbert Murie (2005) and below:

<sup>170</sup> Morillot died in 1931; “quite lately since my visit” suggests that WWB visited Tahaa in about that year.

<sup>171</sup> [Maximilian Reichsgraf von Spee \(1861–1914\)](#)

bombarding Papeete,<sup>172</sup> buried much gold which he had brought from Kaiou-Chou<sup>173</sup> in China, ere he sailed to Coronal,<sup>174</sup> and the Falkland Isles<sup>175</sup> to his death. From New York, the *Seneca*, a yacht well equipped, made hither to secure it. They wasted much dynamite on the ring of coral beach, and in the lagoon within, in their efforts to secure it. That is all that ever came of it, and the expedition broke up at Papeete. The wreck they left behind them is still clearly evident.

## Mopeti

(Sometimes) Maūpiti is a curiosity, its folk still so unsophisticated. It is the Mecca of those who would see an Island in an almost primitive condition; few, however, attain to it as the going is far from easy, save by special chartering. The folk are kindly, but the conditions do not invite for a residence of any length.

A well-endowed visitor from the United States sought my aid to assuage his disappointment. He had come to Tahiti to see the native as he had for years read of him and her in literature. Said he, "I find that I was born 150 years too late," yet hoped. Telling him of Mopeti, he jumped at it. He would make for Raiatea and there charter a schooner to carry him to his Isle of Dreams. I saw him off; he said that he might not return for many months, even years. I did not gainsay him. Scarce one month had passed when I saw him stepping off the Raiatean schooner. At once he made for me. "Never again. Never. Thank god I was not born 150 years ago. I landed, looked around, and promptly fled. Now I know even as do you." He returned to his sumptuous home, and, shortly after, a note reached me to say that he had died.

## Mopelia<sup>176</sup>

This Atoll, discovered by Wallis in 1767 and without resident natives, would be even less known than Mopeti but for an incident that has become a footnote in Great War history. It was on this Atoll that

---

<sup>172</sup> The [Bombardment of Papeete](#) occurred in French Polynesia when German warships attacked on 22 September 1914, during World War I.

<sup>173</sup> The [Kiautschou Bay concession](#) was a German leased territory in Imperial China which existed from 1898 to 1914; it was located around Jiaozhou Bay on the southern coast of the Shandong Peninsula, now [Qingdao](#).

<sup>174</sup> The [Battle of Coronel](#), during which the Imperial German Navy defeated a Royal Navy squadron, took place on 1 November 1914 off the coast of central Chile near the city of Coronel.

<sup>175</sup> The [Battle of the Falkland Islands](#) was a British naval victory over the Imperial German Navy on 8 December 1914, during which Spee and his two sons perished. See also the [Battle of Más a Tierra](#) of 14 March 1915.

<sup>176</sup> Mopelia has several names: Maupihaa, Mopélia, Maupélia, Mopihaa, Maupihoa, Mapetia.

in August 1917 the German raider *Seeadler*,<sup>177</sup> Count von Luckner<sup>178</sup> its Captain, came to grief. With the captains and crews of the various vessels he had sunk on the Pacific coast of America, he sought some unfrequent shore for his need of scraping ship of barnacles and weed. With anchors on the reef, he careened his ship when an unexpected towering wave lifted the *Seeadler* high upon the reef. Its career was over; its bones still lie there. Von Luckner and a few of his crew went off in the Raider's launch to capture yet another ship and return. An innocent Papeete schooner approaching shortly afterwards, all unconscious of danger, was secured by his men, who sailed homeward — but came to grief on Easter Island — leaving their captives to their fate. It was many weeks before news of their plight reached Papeete, via Samoa, whence a boatload made their way. Help was rushed and today in Papeete's museum are many relics of a Raider, whilst the Raider's main gun adorns one of Papeete's public parks.<sup>179</sup>

<sup>177</sup> [SMS Seeadler](#) (German for *Sea Eagle*) was a three-master windjammer. She was one of the last fighting steam and sail ships to be used in war, when she served as a merchant raider with Imperial Germany in World War I.

<sup>178</sup> [Felix Graf von Luckner \(1881–1966\)](#)

<sup>179</sup> Gun of the *Seeadler* in Parc Bougainville in Papeete; see also *Rambling Around* in Part XIV, *Tahitian Vignettes*.

## Scilly and Bellinghausen

Scilly, <sup>180</sup> discovered by Wallis in 1767, to the northwest, and Bellinghausen, <sup>181</sup> discovered by Kotzebue in 1824, still further northwest.

These have but a name to live; no resident natives, but each producing a measure of coconuts, also pearl shell, which are periodically gathered in by schooners.

The Sous le Vents, despite these few hard spots, are on the whole delightful for temporary residence, and full of interest to the Roamer.

## The Return

Papeete was reached once more in a schooner nearly four times the size of the 'Washout'. Its outward appearance was lordly; paint covered its true age. Not long since it broke asunder and foundered in the Tuamotus. Its name, the *France Australe*. Luck was never mine in travel.

The 'Washout' also is no more, surviving the *France Australe* but a short while. Ordered to carry goods and folk to the phosphate island, Makatea, some 120 miles from Papeete, current and wind combined to drive it upon the fringing reef as it sought an anchorage. No lives were lost, but the *Manaura* was wrecked for good.

---

<sup>180</sup> [Manua'e](#). Also *Fenua 'Ura* or *Putai*.

<sup>181</sup> [Motu One](#)

## NOTES ON FRENCH OCEANIA

French Oceania is composed of the islands Tahiti and Moorea with their adjacent islets, and the archipelagos of the Sous-le-Vent (or Society Islands as named by Cap<sup>t</sup> Cook), the Tuamotus, the Marquesas, the Gambiers and the Tupuai.

### The Tupuai Group

This archipelago contains the following islands with their adjacent islets: Raivavae, Tupuai, Rurutu, Rimatara and Rapa. An independent Group, apart from Tahiti.

Raivavae was first seen by the Spaniard Gayangos <sup>182</sup> in 1775. It lies some 100 miles East from Tupuai. It is difficult of approach owing to sunken coral banks and is reef enclosed. It came into French possession in 1880. M<sup>t</sup> Ruatara is its highest elevation. A Gendarme is in charge, assisted by a local Council of Chiefs and Councillors. French subjects, not citizens.

Tupuai was first seen by Cap<sup>t</sup> Cook in 1777. It lies some 300 miles south of Tahiti. It is reef enclosed. M<sup>t</sup> Taitoa is its highest elevation. It came into French possession in 1880. A Gendarme is in charge, as at Raivavae. Subjects not citizens.

Rurutu was first seen by Cap<sup>t</sup> Cook in 1769. It lies some 100 miles from Tupuai. It is reef enclosed, hilly and rugged in aspect. <sup>183</sup> It came under a French Protectorate in 1889 and a possession, with qualifications, in 1900. Its native population are French subjects, but not French Citizens with power to vote. A civilian is in charge.

Rimatara was first seen by Cap<sup>t</sup> Henry <sup>184</sup> in 1811. It lies some 75 miles from Rurutu. It lies low and is reef enclosed. It came under the French with the same qualifications as Rurutu. Its adjacent island Maria <sup>185</sup> was and still is the place of detention for criminals deported from the rest of the Group.

The above named islands grow pia (so called arrowroot), kumara (sweet potato), tobacco, cotton, oranges, manioc (a flour meal), coconuts and bananas, and raise much livestock.

Rapa. This island, though far distant, is included in this archipelago rather than that of the Gambiers. It lies some 700 miles from Tahiti, 300 miles from Raivavae, 170 miles from the Gambiers and 1,500 miles from Chile. It was seen by Cap<sup>t</sup> Vancouver <sup>186</sup> in 1791, though it is affirmed by some that Cap<sup>t</sup> Davis, <sup>187</sup> in his English ship, fell in with it in 1685 and gave it his name. Vancouver named it as Oparo. Cap<sup>t</sup> Powell <sup>188</sup> visited in 1814 and Ellis <sup>189</sup> in 1817, who learned and corrected Vancouver's

---

<sup>182</sup> Tomás Gayangos (d. 1796) had taken over the command of the expedition of Domingo de Bonechea of 1774 after his death in Tahiti and was returning to the Viceroyalty of Peru.

<sup>183</sup> Rurutu is a makatea-type island, with steep cliffs and a fringing reef.

<sup>184</sup> Samuel Pinder Henry (1800–1852), son of William Henry (1770–1859), an LMS missionary who sailed to Tahiti on the Duff in 1797.

<sup>185</sup> Maria is named for the whaler *Maria*, who sighted the island in 1824. It was captained by George Washington Gardner (1778–1838) of Nantucket.

<sup>186</sup> George Vancouver (1757–1798)

<sup>187</sup> Possibly Edward Davis or Davies (fl. c. 1680–1688).

<sup>188</sup> Possibly George Powell (d. 1823), British sealer.

<sup>189</sup> William Ellis (1794–1872)

title to the true native name of Rapa. The L.M.S. on Tahiti sent Davies <sup>190</sup> in 1825 to convert the natives from their idol gods. In 1867, its Chief, Parima, and the rest of the inhabitants asked French protection and a French Resident was appointed. In 1887, France took full possession. As Easter Island (Île de Pâques) was also called Rapa, this island was generally known as Rapa-iti (Little Rapa), whilst Easter Island was Rapa-nui (Great Rapa). It is of volcanic origin, as all the rest. A Gendarme, with a Council, is in charge. Its coastline is much broken, Ahurei the most important of its many bays and is the main settlement. Coral reefs abound, making approach difficult. Till the late '60s, British boats en route to or from Panama to New Zealand and Australia called in with unsatisfactory results for the native population. Its resources are very limited and its temperature forbids tropic fruits. Mountainous, its hills rise to peaks, the highest, Pukunia, 2,700 feet to its summit. Vancouver's name for the island was but the native name of the bay in which he dropped anchor.

### The Gambier Group

These lie some 900 miles from Tahiti. They were first seen by Capt Wilson of the L.M.S.' missionary ship, the *Duff*, in 1797, who gave them the name of a leading supporter of the mission in London, Admiral Lord Gambier. The claim by some that they had already been sighted both by Fernández <sup>191</sup> in 1572 and Quiros in 1606 is not tenable, their courses proving that they sailed far to the north. They are the lip of a one time volcano and consist of ten isles of which the four principal are Mangareva, Taravai, Akamaru and Aukena. These four are inhabited, Rikitea on Mangareva being the seat of the French Resident. From an administrative point of view, twenty-three of the Tuamotus are under his charge. The first occupation of this Group was in February 1844, when Commander Pénaud, <sup>192</sup> Commandant of the *La Chartre*, a frigate, declared and formally placed them under the Protectorate of France. In 1881, they were annexed to that country as a Colony.

Mangareva takes its name from its 'mountainous' sides, where the 'reva' grows and flourishes, a reed-like grass much used in plaiting hats and mats. The rest of the isles lie fairly low. They all lie within a distant barrier reef. Pearling within the lip has been very productive in the Past and pearls of great value have been secured from time to time. Tropic fruits abound. To the south and within sight of the twin peaks on Mangareva, there lies Timoe (the Crescent island of Wilson). This island is uninhabited, but visited for fishing purposes. The reefs within the lip are very numerous and navigation to any of the islands is a delicate matter. Coffee is very prolific and breadfruit trees abound.

### The Marquesas Group

These islands lie some 900 miles from Tahiti and are in two Groups, the Southern and the Northern. The Spaniard Mendana first saw the Southern in 1595, naming after the Viceroy of Peru, the Marquis

---

<sup>190</sup> [John Davies \(1772–1855\)](#)

<sup>191</sup> [Juan Fernández \(c. 1536 – c. 1604\)](#). It has also been claimed that Juan Fernández was the first European to reach New Zealand, in 1576.

<sup>192</sup> [Charles-Eugène Pénaud \(1800–1864\)](#)

Mendoça.<sup>193</sup> Ingraham,<sup>194</sup> Captain of the Boston (U.S.A.) ship, the *Hope*, first saw the Northern in 1771. The Southern Group has five islands (three of any importance); the Northern Group has six (three also of any importance).

The Southern Group was visited by Cap<sup>t</sup> Cook in 1772. The French Rear Admiral, Du Petit Thouars,<sup>195</sup> in 1842, took formal possession of this Group, and proceeding to the Northern the same year, annexed them likewise. They are mountainous and very fertile in their valleys, watered by the numerous streams. They are governed by an Administrator, who is under the orders of the Governor of the Colony, resident on Tahiti. The old time districts are largely retained, each with its Chief, subject to the Administrator.

The native (and official) name of every one of these islands has been loaded with another, the gift of its discoverer, as follows:

#### Northern Group

Nukuhiva	Baux Island by the French Captain Marchand, <sup>196</sup> who followed close after Ingraham in 1791. Called also Martin Island. Baux was a ship-owner.
Uapu	Marchand Island and Trévanion Island.
Uahuka	Du Solide, after Marchand's ship. Called also Washington by Ingraham.
Eiao	Masse Island by Cap <sup>t</sup> Marchand, the name of one of his lieutenants. <sup>197</sup>
Motu-iti, twin islets	Hergest Isles, who commanded the <i>Daedalus</i> . <sup>198</sup> Also the Two brothers. And again, Franklin and Baja.
Hatutu	Chanal Island, after another of Marchand's lieutenants. <sup>199</sup>

#### Southern Group

Hivaoa	Dominique Island
Tahuata	Santa Cristina Island
Fatuhiva	La Madeleine Island
Fatuhuku	Hood Island, after one of Cap <sup>t</sup> Cook's sailors, who first perceived it.
Motane	San Pedro Island

<sup>193</sup> [García Hurtado de Mendoza y Manrique](#), 5th Marquis of Cañete (1535 –1609) was a Spanish soldier, Governor of Chile and Viceroy of Peru (1590–1596). The island was actually named after the wife of the Viceroy.

<sup>194</sup> [Joseph Ingraham \(1762–1800\)](#) was on his way from Boston to the northwest coast of North America to participate in the sea otter fur trade.

<sup>195</sup> [Abel Aubert Du Petit Thouars \(1793–1864\)](#)

<sup>196</sup> [Étienne Marchand \(1755–1793\)](#) was also on his way to the northwest coast of North America, from Marseille, to participate in the fur trade.

<sup>197</sup> Pierre Masse. WWB has *by Cap<sup>t</sup> Hergest*.

<sup>198</sup> Richard Hergest (1754–1791). WWB has *Deodulus*. The *Daedalus* was a supply ship for the [Vancouver Expedition of 1791–1795](#).

<sup>199</sup> Prosper Chanal. WWB has *Channel Island, after another of Hergest's lieutenants*.

## The Tuamotu Group

Called also Paumotus and, by white folk, the Dangerous Archipelago and the Labyrinth. They are eighty in number. These Atolls range over an area nigh 700 miles in length and 500 miles in total width. Their only production, copras and pearl shell. They vary greatly in circuit, from one mile to over 100, and few have Passes into their lagoons. Few of them have escaped another name than their own native one. The selection is very varied as will be seen. The Pomares claimed Sovereignty over this Group.

### The Sous-le-Vent Group

An independent Group, apart from Tahiti.

Also named as the 'Society' and the 'Leeward' Islands.

Raiatea and Tahaa lie within the same Barrier reef, with some two miles of water between them. There are numerous Passes to each, the principal one is that of Uturoa, which is the seat of the Administrator, named by the Governor on Tahiti. Raiatea has two mountain ranges, their summits of commanding height. Both islands are prolific in tropical agriculture, the former famous for its oranges and pineapples. They lie 110 miles from Tahiti.

Huahine. A one time whaling station for the Antarctic whalers, possessing a commodious harbour. It lies within a Barrier reef. It has two clusters of mountains joined by an isthmus, thus forming Huahine-iti (small) to Huahine-nui (large). Its distance from Tahiti is 90 miles.

Pora-pora or Faa-nui (Great Valley) has the finest harbour in the entire Colony. Its central peak, M<sup>t</sup> Pahia, 2,380 feet high, with its shapely cone, is a most striking object from the sea. Its hills form numerous fertile valleys. Within its Barrier reef, there is an islet named Tupué. <sup>205</sup> The distance from Raiatea is about 10 miles.

Tupai or Motu-iti lies the same distance from Pora-pora. It has no native inhabitants and is one of two islands in the Colony which are the property of outsiders, Tupai's owners being an Englishman and a Frenchman who, planting it with coconuts, employ native labour, imported as required.

Maupiti lies 25 miles from Pora-pora. It is reef bound and rises well out of the sea in its centre.

Mopelia, also called Mopihae and Mopetia, is likewise reef bound. Wallis fell in with it in 1767.

Bellinghausen lies similarly encircled. There is no regular use of it by natives. Kotzebue named it in 1824.

Scilly has the native name of Manuai. First seen by Wallis in 1767. Its lagoon formerly much used in pearling, but approach dangerous thro' the barrier reef. It lies 350 miles from Tahiti.

<sup>203</sup> Maria is one of the Outer Gambier Group, which is administered as part of the commune of the Gambier Islands.

<sup>204</sup> [Marutea Sud](#) is also one of the Outer Gambier Group.

<sup>205</sup> There are several islands and islets within the barrier reef; WWB may be referring to *To'opua*.

Maiao or Tupuai Manu, though closer to Moorea than any other island, is included in the Sous le Vent Group.<sup>206</sup> It lies some 40 miles from Tahiti. It has two slight hills and no possible Pass for other than canoe, which it is often difficult to navigate. Wallis fell in with it in 1767 and named it Sir Charles Sanderson Island.

## Moorea

Another name for this island is Eimeo. Wallis named it, in 1767, Duke of York Island, and the Spanish Cap<sup>t</sup> Boenechea, in 1773, gave it the name of Santo Domingo. It lies across a 15 mile strait from Tahiti. It has both a Barrier and Fringing reefs. A chain of mountains forming a large circle cover the island, forming valleys which are dense with vegetation. The highest peak stands over 3000 feet high, the other summits are greatly broken giving a very picturesque aspect from the sea. M<sup>t</sup> Rotui is a unique and striking object. The main native settlements are at Papetoai, Haapiti, Afareaitu, Maharepa, Cook's Bay and Opunohu. The latter's bay has excellent anchorage for vessels. Vanilla flourishes, also the tobacco plant. It has its Resident, who acts with the District Chiefs.

## Tahiti

Named by Wallis, who first saw it in 1767, and by the Spaniard Boenechea, in 1772, respectively 'King George the Third Island' and 'Amat', consists, akin to Huahine, in Greater Tahiti and Lesser Tahiti, joined by the isthmus of Taravao. It is rugged and mountainous, the latter without any symmetry of chain or contour, the highest mountains being Mount Aorai, which overlooks the town of Papeete, and Mount Orohena, overlooking Mataiea, both in Greater Tahiti. In Lesser Tahiti — Taiarapu — Niu<sup>207</sup> overlooks Taūtira. The whole island has a Fringing reef and, in parts, a Barrier reef also. The Passes through the latter into the lagoon, thus formed, are frequent, the main ones being at Papeete, Taunoa and Tautira. Others available for vessels of smaller size than the steamers of today are at Point Venus, used by the earliest navigators; Mataiea; Hitiaa, used by de Bougainville; and Port Phaeton at the isthmus. Greater Tahiti possesses the only Lake, Vaihiria, lying below the outskirts of M<sup>t</sup> Orohena. There are today no native settlements up the mountainsides, as once there were, the whole population living on the seashore or the often narrow flatland at the foot of the mountains. The rivulets, brooks and streams are very numerous, compelling constant bridges on the Highway of over 100 miles, which encircles the Island. The rivers proper are few — the Fautaua at Papeete, the Papenoo in that District, and those reaching the lagoon at Papara and Tautira. The most important of the small islets which dot the coast within the various lagoons is Motu-Uta in Papeete's lagoon. It was much used by the second Pomare and his daughter, Queen Pomare IV, as a residence. Since then, it has been used by the French Authorities as a Quarantine Station.

The first of the French to see Tahiti, which is today one of its Colonies, was de Bougainville and his crew, who followed close upon Wallis, landing at Hitiaa from his vessel *La Boudeuse* in April 1768. He gave the island yet another name, 'New Cytheria'. The seat of government of the whole Colony

<sup>206</sup> Maiao is part of the commune of [Moorea-Maiao](#), which is in the administrative subdivision of the [Windward Islands](#) (and not the Leeward Islands).

<sup>207</sup> [Mount Ronui](#)

is at Papeete, where Government House is situated. There is a Mayor and Council in Papeete; the rest of the island is divided into Districts, each with its Chief appointed by the Governor.

There are two adjacent islands, viz. Mehetia and Tetiaroa. Mehetia is a sugarloaf cone rising out of the sea with a very limited shoreline for vegetation. It is uninhabited, but visited in the proper season to gather the few coconuts and convey them to Tautira, its nearest point. Tetiaroa is off Arue and formerly was the property of the Pomare family, and much used as a resort in early days by members. It was purchased some years back by Dr Williams,<sup>208</sup> now dead, from Prince Hinoi (I), the heir of the last Pomare king. It produces fine copra and excellent fishing ground. The islet of fair size consists of a series of coral banks with ample space thereon for buildings. It is the one and only isle throughout French Oceania wholly and entirely owned by one of the British race.

Tahiti and its dependencies came under a French Protectorate, with the unwilling consent of Queen Pomare IV, in 1838, and became a French Colony, with the willing consent of her son, Pomare V, in 1880.

#### Notes.

The natives (Polynesians) of French Oceania, alike with all others of that race, are in a certain sense Maoris. This word, applied only to the Polynesian natives of New Zealand, has its roots in the word Maohi, which is the native (Polynesian) word for the Race itself. As individuals, they are the coined word Maoris; as a Race they are Maohi.

When Pomare V, in 1880, ceded his sovereignty to France, there went with it the islands over which the Pomares made claim to sovereignty, viz., Tahiti, Moorea, Mehetia (not Maiao) and the Tuamotus, their natives becoming French citizens, with a vote. The rest of the Group — viz., the Society Islands,<sup>209</sup> the Australs, the Marquesas and the Gambiers — not having come under the French Protectorate of 1838, their natives were not even subjects of France till mastered or acquired. They are today French possessions, their natives subjects without a vote, citizenship not being acquired nor, in Raiatea's case, seemingly desired.<sup>210</sup>

<sup>208</sup> Dr Johnston Walter Williams was, at the time, the only dentist in Tahiti, and Consul of England from 1916 to 1935. [Marlon Brando \(1924–2004\)](#) purchased most of the atoll in 1966, and another part in 1967, from a descendant of Dr Williams.

<sup>209</sup> By which WWB means the Leeward Islands.

<sup>210</sup> French citizenship was proclaimed for all subjects of French colonies in 1946, under the [Loi Lamine Guèye](#).

## EASTER ISLAND

The writer having gained from his friend, Arthur Brander, <sup>211</sup> the facts of how this island became Chilean, passed them on to his friend Alfred Rowland, local correspondent of an Australian Magazine from whose interesting article the following excerpts are taken.

During the 7<sup>th</sup> and 8<sup>th</sup> decades of the last century, the ships of John Brander, a prominent merchant resident in Papeete, voyaged back and forth between Tahiti and Valparaiso, laying their course to raise the mountain tops of Easter Island over the horizon, as landmarks for their navigating officers.

Easter Island was then a no-man's land. It had indeed been visited by explorers from many countries; first, for Holland, by its veritable discoverer Roggeveen in 1772, then 48 years later by Spain.

At that period, the paramount aim of the Spanish Government was to exclude every foreign power from acquiring a foothold at any point in or adjacent to those widespread dominions of His Catholic Majesty collectively known as the "Indies", granted it by the Pope Alexander VI in 1493 upon the discovery of the Pacific Ocean by Magellan. It was this policy that supplied the motive for the despatch in 1770 of the ship-of-war *San Lorenzo*, commanded by Don Felix Gonzalez, and the frigate *Santa Rosalia*, commanded by Don Antonio Domonte, to search out and annex Easter Island. <sup>212</sup>

The expedition landed. No foreigners were found there. "The islanders proclaimed our Sovereign as their own. Three crosses were erected on a lofty hill... which," their report adds, "the natives were seen to pull down the very next day."

Captain Cook called there in 1774 and Lapérouse, a Frenchman, in 1786. Both, undoubtedly, claimed the island for their respective countries. These were followed by other navigators... The island was left to its own inhabitants... until about 1864, when missionaries of the Roman Catholic Church landed there.

Sometime in the 1870 decade, <sup>213</sup> John Brander of Tahiti conceived the idea of establishing a cattle and sheep ranch on Easter Island, which boasts of abundance of grass. A co-partnership was formed that included the Roman Catholic mission in Papeete, a French resident of the little town, <sup>214</sup> and John Brander. Cattle and sheep were transported to Easter Island and the Frenchman went there as resident manager. This individual soon goaded the natives to fury by his autocratic and slave-driving methods; they rose against him and slew him.

Later on, John Brander, Junior — his father having died — bought the interest of his mother and went to Easter Island as director of the enterprise. <sup>215</sup> All went smoothly between the Church interests and the Branders, but the widow of the murdered Frenchman was the fly in the ointment — a very restless

---

<sup>211</sup> WWB mentions Arthur Brander in *The Memoirs of Ariitaimai*, published in the September 1945 edition of PIM, page 59, in Part VII. Arthur Brander is also mentioned in *The Late Mr. Bolton of Tahiti* in the June 1947 edition of the Pacific Islands Monthly, in Part VII.

<sup>212</sup> See [The voyage of Captain Don Felipe González in the ship of the line San Lorenzo: with the frigate Santa Rosalia in company, to Easter Island in 1770-1 \(Hakluyt Society, 1967\).](#)

<sup>213</sup> According to various sources, the partnership was formed in 1866.

<sup>214</sup> [Jean-Baptiste Onésime Dutrou-Bornier \(1834–1876\)](#)

<sup>215</sup> John Brander, Senior, died on 15 June 1878. [Alexander Ariipaea Vehiaitipare Salmon Jr. \(1855–1914\)](#) — whose sister, Titaua Salmon (1842–1898), had married John Brander, Senior — ran the estate on Easter Island from 1878 until the island was ceded to Chile in 1888.

and contentious fly indeed. On that account it was decided to dispose of the property, and negotiations towards that end were undertaken with a Chilean firm at Valparaiso.

By happy fortune, the Chilean gunboat *Abtao* appeared at Papeete at that very time. Her Commander, Captain Toro,<sup>216</sup> courteously offered to take Arthur Brander as his guest to Easter Island, where he could consult with his brother and then proceed to Valparaiso. On the voyage it occurred to someone that, inasmuch as the property interests were about to pass into Chilean hands, it would be expedient to place the island under the sovereignty of Chile.

John Brander, Junior, being the son of a Scotsman, had kept the British flag hoisted over his station during the period of his residence, without, however, having taken formal possession in the name of Her Majesty. He could therefore offer no objection when Captain Toro landed and proclaimed the island a part of the Chilean Republic.

John and Arthur Brander were passengers on the *Abtao* to Valparaiso, where the Easter Island interests were taken over by the Chilean company, who subsequently disposed of them to Balfour Williamson & Co.,<sup>217</sup> a Scottish company at Valparaiso.

The Roman Catholic mission and the Branders were in harmonious accord in all matters concerning the liquidation of the co-partnership. The widow of the Frenchman was still the fly in the ointment. Ten years of litigation were necessary before the end of the matter was achieved.

## OPOA

Long centuries ago, Opoa, the open air Temple and Sanctuary of the Polynesian gods — now a wreck untended and unthought of — was the centre of a vast wide-spreading Confederacy of that native Race. It lies on Raiatea, in prior days known as Havai'i, one of the Society Islands Group, 100 miles west of Tahiti. Raiatea stood out pre-eminent among the Central and South Eastern isles of Polynesia; Tahiti — completely overshadowing it today — was but an appendage, carrying no special prestige. It may be interest to some to recall that Past, so little known, yet intimately connected with the natives of our day, a link in the chain of evidence — much sought by savants — from whence and how and why those we know, and many of us dwell amongst, originally came from. They were definitely not the first inhabitants on these islands; they found others already in possession, but these were weak and defenceless against the newcomers who were strong and ever ready for battle. The former were from South America; the latter sprang from Asia. East met West. Just when, no mortal now can tell, but the results from their meeting are clear. Let us dwell on the Easterners first.

Easter Island, or Rapa-Nui, the first spot of land west from Chile 2000 miles away and separated from the first present day Polynesian Group by more than 1,000 miles of open sea, plays no small part in the story. It is an island twelve miles round its coastline, triangular in shape, having at each corner of its five mile width, a volcanic peak rising from its now dead base 1,800 feet. The soil is mostly decomposed lava. Lying outside the Tropics, it had and has no coconuts, no breadfruit, no trees, but scattered bush and abundance of grass. Even today, only in sheltered hollows made by hand can the natives cultivate bananas, sugarcane and the all important kumara (sweet potato) brought thither by their ancestors.

Whether these found, or themselves sculpted and erected, the amazing stone Statues which distinguish Rapa-Nui from every other island in the world is a problem hard to solve. Opinions greatly differ. These Statues, numbering hundreds, of all sizes — their size and weight happily preventing only a trio's removal from the island to grace museums in England and the United States — were carved out of the solid rock on the slopes of the extinct volcano, Rano Raraku; the tools used, of volcanic glass, still are to be seen lying about the quarry. Two hundred giant images, their faces looking inward, once stood erect on great terraces built up of large slabs of stone mortified neatly together. The largest of these terraces is some 300 feet long and from 8 to 14 feet high, a paved slope on the land side leading up to where the Statues stood, giants 12 to 20 feet in height, some reaching over 30 feet. Today, all but a few are lying prone, it is said by hand of warring man, an internecine strife, or, more likely, by their conversion to Christianity, they hauled them to the ground. Three roads once evidently led away from the mountain quarry to the terraces of the triangle and which hug the coastline, upright Statues once dotting even the course of the roads. In the quarry, there still stand or lie many more than those used on the terraces, of all sizes great and small, in various stages of completion, one monster among them lying prone measuring 68 feet. They, one and all, represent the upper half of the human body. The completed ones were 'crowned', these crowns of stonework rising five feet above the head; the crowns of a red stone, the rest of the Statue grey. Thus seemingly would the sculptors do honour to the gods, or maybe to the spirits of their dead, who, in their hundreds, were buried in the triangle. The fact that in the Marquesan and Tupai groups alone are found scattered giant images of stone, stopping short where the Westerners ran into the Easterners, would seem to name the latter, rather than a still prior race, inhabitants on Rapa-Nui as the builders. The Easterners were clearly roamers; there seems to be no evidence to show that a prior race were likewise.

The religion of the west coast of South America — Peru and Chile — was centred in Sun worship. There seems to have come a stirring amongst the natives of those coasts; perhaps they had become overcrowded, but more likely it was a religious mania that gripped them. They would follow their

Sun god to his home where he sank to rest in the West. In their great double canoes, they voyaged out into the vast ocean, priests aboard, and not forgetting among their provisions their kumara, a vegetable of their Continent, unknown in Asia. By happy chance, they struck Easter Island, even as the Dutchman, Roggeveen, did in 1722, and made it, whether inhabited or desolate, the resting place of some amongst them, whilst others pushed on towards the West, peopling islands as they went, the far Eastern and Central islands of the Polynesia of today. Here their course was stayed, for now they ran into the Westerners, who had been pouring in from Asia. Just as they seem to have absorbed the prior natives they had met on their way, so now they in turn were absorbed by the Westerners.

But though absorbed, those Easterners left their mark upon the Westerners, who gained from them three lasting things: a new god, a new vocabulary and a new food. Prior to this meeting of the natives of two continents, the Polynesians of the West had no Sun god. Now they added the Sun god, Tane, to their pantheon of deities and Tane — not Atea, the supreme god of the common people, nor the great Oro, god of war — became the chief Deity of popular worship in Central and South Eastern Polynesia, and remained so until Christianity triumphed. And their vocabulary took on new forms. In the dialects of the above named portions of present day Polynesia, a large percentage, even up to 30 percent, is composed of words that bear no relation whatsoever to words of similar meaning in Western Polynesia, but bear striking resemblance to similar words of the South American coast. And the kumara would seem to settle the matter, for, as noted above, to the Polynesians it was wholly unknown, and today it is one of their standard foods.

The Easterners, alike with the Westerners, were filled with ambition. The ancient designation of Rapa-Nui was Te Pito, i.e., the naval or centre of their would-be island world. Seeing that, geographically, it was the very opposite, nor could ever be otherwise, it was evidently so called as being the motherland whence other lands would be peopled by them, the centre of a Commonwealth, which in truth it became, and endured until the Polynesians engulfed them. They had reached well out westward before the collapse came.

Let us now follow their masters in their forward course and note how their vast wide-spreading Confederacy arose, to become likewise but a memory. They had spread far and wide over the South Sea, entering upon it through the Line (Equator) islands, thus missing the New Caledonia of today and Fiji with their Melanesian immigrants, when a High Chief named Te Fatu set out from the island of Rotuma, lying over 200 miles to the north of the Fiji Group, having upon it a very sacred marae or Temple and Sanctuary of the gods, with the intention of conquering and peopling with his Race such islands as he and his followers might hap upon, if not already peopled by them, as actually many were. He roamed far. He reached Pora Pora of the Society Group and its nearby companion isles, thence to the Marquesas, the Tuamotu Atolls, the Gambiers and the Australs, then on to Rarotonga — the Cook Group — and southward to land upon New Zealand, whither large migrations had already gone from Raiatea. Where're he went, he with his son, Maro-Te-Tini, sought to set up cordial relations, the one Group with the others, uniting them in a Confederacy, and as a central site for conventions of warriors, priests, scholars and Chiefs, fixed upon Raiatea. Here the marae at Opoa was set up, on the site of an earlier marae of good renown, a corner stone of its great platform a sacred one brought along by Te Fatu from his marae on Rotuma, thus constituting Opoa as a Tapu-Tapu-Atea, a transcendently holy spot.<sup>218</sup>

---

<sup>218</sup> The source of WWB's account of Te Fatu, here and below, was almost certainly Teuira Henry; see, for example, [The Tahitian version of the names Ra'iatea and Taputapu-atea, The Journal of the Polynesian Society, Volume 21 \(1912\), No. 2: 77-78.](#)

Here then this widespread Confederation of Polynesians from Southern and Central and far Eastern Polynesia met periodically during centuries for deliberation, helpful counsel and religious observances. Both history and legend are clear as to this happening. Even the ceremonies of that far away time have come down to us. Their religious observances were a very serious matter to them. There was a stateliness about them that bespoke profound reverence for their gods. There was a Sacred Pass with its own special name that led through the Barrier reef to Opoa. All was order at the gathering, the canoes entering Te-Ava-Moa in procession, in double line, each canoe representing a different section of the Confederacy, drums beating loudly the while, and native-made trumpets pealing forth. Then came the landing on the Fringing reef, the presentation of gifts to the gods — which the priests took all good care of themselves — and the solemn procession into the Sanctuary open to the sky. There was an inner sanctuary, also roofless, which the presiding high priest and others of his rank alone might enter. While the mystic rites were performed, all fasted; no fire was lit for cooking at Opoa. For any of the common people to approach whilst the religious part of the Convention was carried through meant instant death by club or spear.

The priests of Opoa were not at all modest in their claims. In the course of time, they gave out that the great god Oro was born in that sacred area and that the High Chiefs of Raiatea were the direct descendants of that god. Great therefore would be the honour for the High Chiefs of other islands in the Confederacy to gain the hand of such exalted maidens as were Raiatea's. And all was accepted as truth. Opoa was in the limelight for many a century, the Holy of Holies in this vast Union of peoples. But disunion came and decay set in, and the end of this great Confederacy appears to have come about somewhere in the middle of the 14<sup>th</sup> century or about A.D. 1350 — 600 years ago, when England was still forming.

But though the Confederacy fell to pieces, Opoa held its own in South Eastern Polynesia; other maraes lost their standing as the years rolled on; its death toll was sounded by the advent of Christianity and ere long its triumph. Polynesians outside of Raiatea have little or no memory of it today, but the white man who wrecked it recalls its heyday with interest and steps within its fallen walls and treads its broken pavement with deep respect for a vanished Past.

Opoa, as has been noted, stands on Havai'i, which may confuse the reader who thinks only of that northern group of islands called Hawaii. That name is, correctly speaking, a loose term used by earlier Polynesians for their island homeland. The Samoans have their Savai'i; the Rarotongans, their Avaiki; the Maoris of New Zealand, their Havaiki; the Hawaiians use it not only for their group, but apply it specially to their largest island. Raiatea so used the name, but had yet another name for itself not generally known.

In primitive fashion, those living on its East coast were looked down upon by those of the West coast, since all wisdom came from the west; the former was Dark Land Uri, theirs was Light Land Tea. In course of time, this divergence was dropped by common consent and the two names were blended into one, Uri-e-tea — Dark and Light — and this was the name given to Captain Cook when he landed from the *Endeavour* and was recorded by him as Uliateah.

Opoa is today in the possession of the French; Rapa Nui is in the possession of Chile. Great has been the change since the days long centuries past when they met in the person of their respective natives, roamers from West and East. Both were out for wider growth and settlement. It was inevitable that they would meet and either merge by intermarriage or be exterminated, the one by the other. They merged; the greater absorbed the less. The maternal religious belief would as inevitably be impressed upon the new generation, and Sun worship, the cult of the East, became increasingly the cult of the West; their languages were each enriched; and the lowly kumara became the welcome heritage of both.

## A PACIFIC CRUISE IN 1838

From The Times <sup>219</sup> of February 1938

**Well worth saving from a newspaper's files.**

A hundred years ago, the frigate *Imogene*, <sup>220</sup> commanded by Captain Henry Bruce, <sup>221</sup> anchored in Valparaiso after a five months' cruise in the South Sea. Unpublished letters written by the Captain to his brother-in-law, Sir Thomas Troubridge, <sup>222</sup> a Lord of the Admiralty, have come by way of a descendant of the latter to the present writer. <sup>223</sup> Apart from anecdotal value, they shed direct light on the obscure period in the history of the Pacific development which lies between discovery and the beachcomber era.

If many naval commanders were then like Henry Bruce, the conception of British duty to alien and subject races as one of trusteeship must have been in the air 80 years before the phrase 'mandated territory' was known. From the evidence of the letters, however, one would guess him to have been more humane than most. Down to the south west in Melanesia, there was wholesale murder and the sandalwood trade. Bruce's policy in the Central Pacific was to imbue good principles, rebuke the heathen, and discourage rogues as far as he was able within the limits of his commission.

The *Imogene* left Valparaiso on August 8, 1837, according to her log in the Record Office. The first letter, written at sea in October, describes a call on September 8 at Santa Christina <sup>224</sup> in the Marquesas, where Bruce found two missionaries, <sup>225</sup> residents for three years past, but no other Christians:

The Queen having come onboard to visit me with her husband, King Totiti, <sup>226</sup> I placed on her shoulders a Tartan shawl, with which she was delighted, and I presented her husband with an old Coat, Epauettes and Cocked Hat, which he had done me the honour to ask me for. Totiti was in raptures with me — principally on account of my height, for these People invariably consider that none except the largest ought to be Chiefs — and finding him in so civilized a humour, I advised him to attend to the missionaries' instructions, but I could only get from him that he would not prevent the Pickaninnies (the women and children) but that for himself he was immovable.

Moralizing on the inscrutability of the Deity, who had given such heathens a mild climate and a soil that yields abundance without cultivation, the pious captain sail'd on to anchor (September 29) at "a village of huts called Honolulu," where he stayed for a fortnight. His attempts to outline a proper British policy towards the whole Sandwich Group occupy the end of the first letter, as well as most of the second letter written on November 29 after leaving Tahiti. The state of religion pleased him;

---

<sup>219</sup> [The Times](#) is a British daily national newspaper, first published in London in 1785 under the title *The Daily Universal Register*; it became The Times on 1 January 1788.

<sup>220</sup> [HMS Imogene](#) was a Conway-class sixth rate of the Royal Navy, launched on 24 June 1831. She served in the East Indies, China and South America, but was accidentally burnt while out of commission on 27 September 1840.

<sup>221</sup> [Henry William Bruce \(1792–1863\)](#)

<sup>222</sup> Possibly [Edward Thomas Troubridge \(c. 1787 – 1852\)](#).

<sup>223</sup> The present writer is currently unknown, although a subscriber could check the [archives of The Times](#).

<sup>224</sup> [Tahuata](#)

<sup>225</sup> George Stallworthy and John Rodgerson of the London Missionary Society were on Tahuata in 1837; see [this source](#).

<sup>226</sup> Usually *Totete* in the literature.

there were 140 American missionaries in the group, and the principal church of Honolulu had a congregation of 3,000 natives, the services being performed in the native tongue, after the Presbyterian manner, and the Queen,<sup>227</sup> who is a professing Christian, always attends it. There was a Bethel Chapel for English and American residents and two missionary schools where the children learn the multiplication table and repeat it to the tune of ‘Yankee Doodle’, their instructors all being Americans. King Tamihuncher III,<sup>228</sup> a young man of idle habits, heard divine service onboard the *Imogene*, was deeply affected and when he heard one pray for himself, he said to Mr Chandler, “That is me,” and shutting his book, covered his face with his hands.

The prospects were even more promising on Hawaii (spelt Awyhee), which was visited after leaving Honolulu. The Chief of the district was a woman, a zealous Christian called Kaperlone,<sup>229</sup> and a hymn was sung in the missionary school to the tune of “Scots wha’ hae wi’ Wallace bled”.<sup>230</sup> She and Bruce had a conversation which appears genuinely to have moved him, and even more the lady, who, with her interpreter, burst into tears, explaining that he was the first foreigner to put a Bible in her hands.

She gave me a spear — a long wooden instrument quite plain, 22 feet in length — which had pierced Captain Cook’s body at the time of his death, and had been kept concealed ever since by her husband, and since his death by her. In the evening I landed and took my farewell; she is half black and a stout comely woman about 40 years of age. I stood on the spot where Captain Cook fell, and I conversed with a man who was near the scene of action at the time. As there was nothing to mark the spot, I obtained from the Chief a Cocoa Nut tree near to it, having a shot hole through it, made on that fatal day, 14<sup>th</sup> February 1779. Lord Byron in 1825 had caused a small tablet to be erected at the place to which Captain Cook was carried, but that being a mile distant was likely in course of time to be confused with the other. I thought it well to mark the identical spot. The spear I hope to present to the King.

Two years ago, a careful search was made for the spear at Windsor, but no trace of the weapon or of its receipt could be found; nevertheless, it is quite possible that the spear may still be in the Castle.

This Eden had only two serpents, idleness and Roman Catholicism.

It must be regretted that the ignorant people were not impressed with the importance, or rather, the necessity, of industry, which must go hand in hand with the Gospel of Christ, as the ground yields so much spontaneously that they found no inducement to go to work.

The religious problem was approached by Bruce and King Tamihuncher in a spirit of bigotry.

He is most desirous to prevent Roman Catholics from coming and teaching their doctrines on his Dominions and I think it much to be wished that he should be encouraged, but they manage to land. His government then sends them away by force, and he is embroiled with the nations for breach of their treaties.

Bruce gave moderating advice for emergencies which was poorly received.

<sup>230</sup> [Scots Wha Hae](#) by [Robert Burns \(1759–1796\)](#).

The Queen slapped her thigh at me when I told her that if a Roman Catholic Bishop, who was coming gainst my advice on his way to the island of Ascension, required for the good of his health to land, she must not, in common humanity, refuse permission.

The long screed which Bruce sent to Troubridge on the political situation in the Sandwich Islands is interesting in its revelation of the unsatisfactory way in which the Pacific Spheres of Influence drifted into the Colonies. The Kings and Chiefs were by this time fairly used to foreigners and had learned to make a distinction between those who brought the Gospel and advice and those who brought disease and rum. But when it came to making friendly Treaties with the Powers, they were as much at a loss as an orphan child might be in conducting negotiations for a 'modus vivendi' with his aunts and uncles. The grown-ups, they thought, ought to know better than themselves. But what was likely to happen should the grown-ups fall out with one another? Bruce wrote Home with urgency and an unconcealed desire to be possibly the first governor in the Sandwich Islands. He also had the acumen to prophesy that unless something was done, other than to send casual emissaries, the influence of the American missionaries would inevitably pull down the scales.

Having left Hawaii on October 17, the *Imogene* reached Tahiti on November 13, meeting adverse winds which reduced her progress. Here again the discrepancies of unofficial envoys made diplomacy difficult. H.M.S. *Conway* arrived shortly after the *Imogene* and Bruce explained the situation with philosophical humour:

The *Conway* brought presents for Queen Pomare from our Government, so that while I was lecturing her Majesty and her Authorities for breaking into the houses of British subjects and otherwise ill-treating them, and vice versa, the *Conway* was presenting her with two soiled gowns, a handsome pink bonnet, an ugly soiled cap and some ribbands cut into five fathom length. Pomare is an interesting woman; she is a decided Christian and very well conducted; is married and has had three children, who all died young; she is warmly attached to the English, who I am sorry to say behave very ill and give her the greatest trouble in her own country; ships ought to be sent more frequently to protect her from British insult, as well as to look after British interests; she dined onboard with me, and wrote me a letter, beside giving me one in charge for our King.

But Tahiti did not interest Bruce deeply, and after marking with a black blob in the Log, the date November 16, when the *Conway* told him of King William IV's death, he sailed to Valparaiso by way of Pitcairn. Of Pitcairn and the Christian descendants of the Bounty mutineers, he wrote that if that island were a 'three-decker', he would be glad to be its Commander.

## THE CONDOMINIUM OF THE NEW HEBRIDES

Compiled from various sources and articles and on the spot.

The establishing of a Condominium was a new and unique experiment in government, in that it had to do with a people who had no institutions of government of their own, nor the slightest semblance of organization among them, scattered natives on separate islands who had come under the hands of two European nations greatly differing in their aims and methods. But something had to be done as will be shown, and the Condominium came into actual fact on October 20, **1906**,<sup>231</sup> and was set going officially at Via, on E-fa-te, the main island of the group on December 2.

The New Hebrides Group was discovered to white men by the Spaniard, Quiros, in **1606**, who dropped anchor in the large bay named by him St Philip and St James, lying in the northernmost island, which is 75 miles in length and 45 miles across. Full of enthusiasm that he had struck the great Southern Continent, the dream of all the early adventurers, he called it 'La Austrialia del Espiritu Santo' — the present day Santo Island.<sup>232</sup> He passed on, and for over a century the Group was unheard of. In **1767**, the Frenchman de Bougainville<sup>233</sup> reached it, who found that Quiros' report of the lost continent was but a group of islands great and small. He sailed through the Strait between Santo and Malekula which bears his name today, landing on the island of Aoba, which he named Lepers' Island, mistaking a skin affection, from which the natives were just then suffering, for that dreaded disease. Next came the Englishman Captain Cook<sup>234</sup> in **1774**, who, with his usual thoroughness, explored the entire Group to which he gave it its present name, charting and naming most of the islands, their headlands and straits. In **1788**, the French sent Lapérouse<sup>235</sup> thither, but he disappeared, nor was his end or that of his crew and ship discovered for many years. In **1789**, Bligh, on his famous boat voyage from Tonga to Timor, after having been cast adrift from the *Bounty* by its mutineers, sighted, but dared not venture to land on the Banks Group, about 100 miles to the northward of the New Hebrides. The Spaniards had already seen and named the small Torres Group lying between Santo and Santa Cruz. The French sent out D'Entrecasteaux<sup>236</sup> in **1793** to search for Lapérouse and he visited the Santa Cruz Group, where later on it was found his fellow adventurer into those far scattered groups had been shipwrecked and both he and his men came to their journey's end.<sup>237</sup>

The Banks and the Torres Groups are included in the Condominium under the dual control of England and France; the Santa Cruz Group is lined up with the Solomons under England alone. As is seen above, Spaniards led the way. By right of discovery, all but the Banks Group were theirs to command and settle, but their day was done. Discovery alone gives legally no right to possession. Settlement must follow or any right lapses. This is clearly to be seen in the case of New Caledonia. Cook found it, landed, raised the Flag and named it, but no settlement followed. Long years later, the French founded a settlement thereon and that island with its valuable mineral contents is theirs today.

<sup>231</sup> WWB has written the year a second time in the margin; they will be written in bold here and below.

<sup>237</sup> See *Headstone* in Part I, *Notes On the Life of William Washington Bolton*.

For nigh half a century, the Groups here dealt with lay dormant, save for an occasional white caller on his ship, amongst them D'Urville <sup>238</sup> and Belcher, <sup>239</sup> Erskine <sup>240</sup> and Markham, <sup>241</sup> whose logs and reports make interesting reading. The first white folk to land and to remain were British: missionaries.

John Williams <sup>242</sup> of the London Missionary Society led the way in **1839**, though he paid for it with his life on Erromanga even as he set foot thereon. But though repulsed, his fellows were not defeated and from Aneiteum, the southernmost island, they steadily advanced northward. The name of Paton <sup>243</sup> must ever be linked with the fight and victory over paganism. He and his descendants for over a century now have left their mark upon the Group. As the years passed, the London Missionary Society withdrew in favour of the Presbyterian missionary societies in Scotland, Canada, New Zealand and Australia, with the view of giving those countries a definite interest in the work. The Anglicans were allotted the spiritual charge of three islands under the Melanesian Mission, whose starting took place in New Zealand. The Roman Catholics made a start in 1848, but retired, only, however, to return in 1887 in greater force and spread themselves over most of the archipelago.

Here, then, for Christianity's work among the New Hebrides, both English and French were engaged, a spiritual dual control, but, as yet, none political. The Anglicans were the first (and quite innocently) to raise the question of the latter and we must go back to **1841** when the See of New Zealand was established by those in the Homeland, with that great spiritual leader, Bishop Selwyn, <sup>244</sup> in charge. To him, the New Hebrides were part of his See, his care and supervision, grounding his position, as he did, on the Letters Patent of the Colony when founded and issued as the New Zealand Charter of 1840. Therein its boundaries covered a vast area of sea and islands, nigh 5000 square miles, but very indifferently and indefinitely named.

Selwyn had much on his hands, but in **1848** he started what he called the Melanesian Mission, not on the New Hebrides but on the Isle of Pines on the coast of New Caledonia, then unsettled, with the intention of working there upon both New Hebrides and New Caledonia — all within his See. When he revisited the Isle in **1851**, he found that his teachers had been more or less compelled to leave for other islands, such as the Loyalty, and that the French Roman Catholics had established themselves in their place. His jurisdiction was denied and though upon his return to New Zealand he urged the Home Authorities to annex not only his station but New Caledonia as well, and orders were issued from London to the British Admiral on the Australian station to hoist the Flag, time was lost, the facts became known and a French Admiral, on the plea of an outrage upon French sailormen, hoisted another nation's Flag in September **1853**. Selwyn's supposed See's boundaries were still further curtailed — not for him, but his successors — for when the Premier of New Zealand, Sir George Grey, <sup>245</sup> made claim in **1878** that the New Hebrides were within the original boundaries of that Colony, the Imperial Government informed him once and for all that such was not the case. Politically, the Group was No Man's Land. This clear declaration by Lord Derby, <sup>246</sup> known as the '1878 Understanding', come to between the governments of England and France at that time after much interchange of views, was in complete harmony with the Imperial Government's Order in

Council of 1877 dealing with the jurisdiction of the newly appointed High Commissioner of the Western Pacific, who was to be stationed at Suva, Fiji. All islands under him were specifically mentioned, but the New Hebrides found no place on the list.

The ‘Understanding’ had to come, for not only New Zealand, but Australia, were demanding annexation, and that publicly. The French Government drew London’s Colonial Office’s attention to very aggressive articles and protested. They received the reply “Her Majesty’s Government have no intention of changing the conditions of independence which the New Hebrides now enjoy.”

But the matter would not rest. By this date, other than missionaries had settled in the Group as planters and traders, far more numerous by the British than by the French, though only 200 miles from New Caledonia. Most of the trade, however, passed through Noumea, the chief town of New Caledonia. In **1883**, a Company was formed there to colonize the New Hebrides and large tracts of land were purchased by Frenchmen, both from the natives and the resident British. These new settlers had the benefit of what was practically Free Trade with France, as the rest had not, and their numbers multiplied rapidly, soon surpassing the British, even as they do today. Feeling in Australia ran high and the Colonial Office at Home was besieged with petitions to set things on some definite basis.

The agitation was greatly strengthened by the announcement of the French Government to make fuller use of the penal settlement in New Caledonia. This was inferred as aimed by the French to later on make the same use of the New Hebrides. Be it noted that the first batch of French convicts were landed in New Caledonia in 1864, when 200 arrived; in 1870, 2,000 were transported; by 1883, the total had reached over 17,000. The French at the same time determined that ‘time expired’ convicts were to be free as settlers within the bounds of that Colony — they were to be life settlers; no returning Home for them.

There was ground for complaint; there had been constant escapes of both these semi-free and confined convicts to the coast towns of Australia, giving the police serious trouble and the public much anxiety. To the remonstrances addressed Home, Lord Derby replied that the independence of the New Hebrides having been recognized by both governments, that matter must rest. As to the convicts, he quoted the French Government’s reply to him upon his drawing their attention to the danger to Australia — they could not admit, whilst desirous to show every consideration to others, that any foreign country had the right to prevent France from sending her convicts to one of her colonies.

But things within the New Hebrides were at work to the end Australia sought, something definite. With the steadily growing increase of settlers and traders, disputes naturally arose among them, as also with the natives, and there was no court or authority to settle matters. Things would have become chaotic but for the occasional visits of a British or French warship, before whose commanders quarrels were brought and adjusted. Australia looked on with amazement at such a farce and again got busy.

At the close of 1883, a Conference of the Premiers of the Australian Colonies was held at Sydney, and the New Hebrides was one of the leading subjects dealt with. Stuart,<sup>247</sup> the Premier of New South Wales, stated that he felt, after the repeated assurances of both France and England, the rights of each must be recognized and as the most practical solution of the difficulty, he suggested a Joint Protectorate. Annexation by either Power was out of the question. Not so, thought others present. The leading New Hebridean missionary of that day, the Rev J. G. Paton, had sent a letter to the Conference, pleading for nothing short of annexation by England. He affirmed that no other nation had spent a farthing on the Group for its good, whereas all the two million pounds sterling spent in

---

<sup>247</sup> [Alexander Stuart \(1824–1886\)](#)

missionary efforts in the New Hebrides and throughout the other groups in the South Sea was British Money. The Premier of Victoria <sup>248</sup> — where the missionary's headquarters were — strongly supported Paton's plea. But the '1878 Understanding' blocked the way — an unpassable barrier and the Conference so realized. It had to content itself with an appeal Home that the 'Understanding' should be made to give way to something more definite. Nothing came of it. Time went on; petitions continued to pour in to the Colonial Office from various sources other than government. Nigh three years passed and British, French and natives in the Group were constantly at loggerheads. Then something happened that forced action.

In **1886**, without either notice or warning, France set up military posts in the Group. She claimed that her hands were forced by the occurrence of outrages upon her subjects and that she would be glad to withdraw them as soon as satisfactory arrangements were come to for peace and security for her people in the Group. Things at last got going. The Foreign Office opened negotiations. The French suggested that the question should be discussed along with the question of the Suez Canal, a sore point with France. They wanted full control of the latter, even more than the New Hebrides. This double question was firmly refused. Then came delay. France's politics were in a mix up; parties were at variance. Quiet restored, another *Quid pro Quo* was proposed by France. She had long wanted the Leeward Islands of present day French Oceania. The declaration of London of 1847 blocked the way. Those natives had for all those intermediate years depended on Great Britain as their shield from French domination. England astonishingly let them down in consideration of a plan being agreed upon for a Joint Commission — no more — in the New Hebrides. France secured with guns the Leeward Islands, but the natives have not forgotten, yet, as astonishingly, have forgiven.

In **1887**, a Joint Naval Commission came into being. It consisted of two Officers from a British and two from a French warship, presided over by the British and French Commandants alternately. The duty of the Commission was to maintain order and protect the persons and goods of the subjects of the two nations in the various islands. It was laid down that no naval officers of either nation was to take independent or isolated action. When trouble arose, the Joint Commission was to assemble and take necessary action. The Commission worked satisfactorily as far as its powers ran, but there was still no Civil Law and matters lying under that head were outside of their orders. No contracts could be enforced; no one could proceed against another for a non-criminal offence; marriages between the settler families had no legal standing and outside of the Group were legally invalid. There was no tribunal to settle disputes arising among the British, or among the French, or among the natives. This latter matter was met in **1902** by the Powers sanctioning a Court, presided over by a Judge of their own nation, but nothing for the natives. It was but a makeshift, two parallel jurisdictions as separate as the languages there spoken, and the natives gave constant trouble to the settlers over the rights they claimed. To meet the latter, a Declaration in **1904** was signed at London between the Powers which aimed at ending the difficulty with the natives regarding land. It was but talk; it did not become fact. In the New Hebrides there was discontent; in Australia and New Zealand, patience was well nigh exhausted. Action was urged, final action at that, with, however, the proviso that before any final settlement was signed by the Powers, it should be submitted to the Colonies.

In February **1906**, the long drawn out difficulty was met squarely face to face. Delegates from France and Great Britain met and finally agreed upon — not another Declaration, but — a Convention to form a Condominium which should include the Banks and Torres Groups with that of the New Hebrides. These three Groups to form a region of joint influence. Each of the two Powers to retain jurisdiction over its subjects. No native to be allowed to acquire the status of a subject of either Power. Resident subjects of other Powers to chose which Law, British or French, they would come under.

---

<sup>248</sup> [James Service \(1823–1899\)](#)

Each Power to appoint a High Commissioner who should have control of bodies of police of the same strength. A Joint Court to be set up to consist of three neutral magistrates acting as President, Public Prosecutor and Registrar of the Court, and two Judges, one of each Power. An Official Interpreter to be appointed to be the translator for record of all proceedings of the Court in both languages. The two High Commissioners to name a neutral as Advocate for the natives in every case brought before the Court. In civil actions brought, the Court to decide definitely, without appeal, all landed property litigation and all suits between natives and non-natives. Separate British and French Courts to have jurisdiction, each over their own nationals in all criminal matters other than native, and all civil matters other than land. Imported labour had severe restrictions. The two Resident Commissioners to reside at Vila on Efate Island and to administer together the following services: Posts and Telegraphs, Public Works, Ports, Harbours, Lighthouses, Public Health, and Finance. The sale of arms and alcoholic liquors to natives to be totally prohibited. No fortifications to be erected, nor penal settlements established. The Draft of the Convention contained no less than 68 articles.

These, as agreed upon, had to be submitted to Australia and New Zealand. Each found fault and suggested amendments. By the time their despatches reached England, Lord Elgin,<sup>249</sup> then at the Foreign Office, felt that there was grave danger of the whole matter failing unless prompt action was taken, France showing restiveness and a disinclination to mend or amend. He considered it absolutely necessary to ratify the Draft as it stood, despite the objections of the Colonies, and this was done October 20, **1906**, when the Condominium came into effect for good or otherwise as Time went on. How long it will last none can foretell.<sup>250</sup>

**THE YSABEL OF UNSAVORY MEMORY, 1921–1924** <sup>251</sup>

As the *Southern Cross* number 3 of the missionary vessels of that name, it was built at Auckland in 1874 and was a barquentine fitted with engines. She proved an exceptionally fast boat and had many smart passages on behalf of the Melanesian Mission to her credit. After 19 years service with that mission, she became too small for the work and was sold in 1893 to a Captain Ross <sup>252</sup> of Auckland, who removed the engines and used her for many years in his trading between Niue and Auckland having changed her name to Ysabel <sup>253</sup> after one of the islands of the Solomon Group, discovered in February 1568 by Mendana, the Spaniard, and so named in honour of his wife, who was aboard with him along with her three brothers. In 1914, she was sold to a N.Z. Firm, who continued to use her in the islands trade till 1925, when condemned as unseaworthy by the N.Z. Authorities, she was sold to outside buyers. Her end came in 1927, when she was destroyed by fire at sea after a useful career of over 50 years.

Note. She leaked abominably; the pumps were ever going, the water reaching to the level of the lower bunks in heavy weather. She was infested with rats and cockroaches, who contested the possession of your bunk. The one and only boat was a fit companion without provision of water or tinned food. But the crew were fine.

<sup>253</sup> The barquentine *Ysabel*, on which William Ross traded between Auckland and Niue for 25 years, without mishap:

## NIUEAN FISHERMEN

A note by a witness — Judge McCarthy of New Zealand — of these Supermen

As all fishing at Niue is done on the open sea, unprotected by any outer (barrier) reef, the island canoes are well and strongly made. Single canoes are from 15 feet to 20 feet long, with a beam of not more than 20 inches, while the three-man canoes range from 24 feet to 30 feet in length and have an inch to three inches more beam. The single canoe is light enough to be picked up by one man with ease and three men can carry the three-man canoes, which are hollowed out to a thickness varying from one-quarter to three-eighths of an inch. They are mere shells.

In these low, narrow catamarans, the natives go great distances out to sea at times, but the main fishing grounds lie within a mile of the shore. The ocean bed goes down to great depths and it is nothing for a native to have out 100 to 300 fathoms (six feet to a fathom) of line with a fish anywhere from 100 lb to 400 lb on his hook. The record is said to be a 900 lb fish.

The Zane Greys <sup>254</sup> of the world catch their swordfish, marlin and tuna on the best of gear and from the finest of launches and the world hears of it as an outstanding event in prose and picture. The humble Niuean catches his game fish, swordfish, shark, vahakula, <sup>255</sup> paala <sup>256</sup> and many others just as big and plays them on an ordinary fishing line with a piece of steel trace about 6 feet long (a strand of wire hawser) from his modest little canoe.

He is not acclaimed as a superman, which of truth he is.

## THE EXIT OF THE TAHITIAN FLAG

### Preamble

The genesis of the Tahitian Flag is as follows:

The original from the days of Pomare II was wholly of red fustian with a five-pointed star in white in the upper corner nigh the staff.

In 1828, an appeal was made to England by the Queen and Council for permission to fly the British Flag over her domains.

In March 1829, H.M.S. *Satellite* arrived with the reply that this was impossible as the ‘Georgian Islands’ formed a sovereign State. It was thereupon resolved that there should be a new Flag of three horizontal bars — Red – White – Red — in equal breadths.

In September 1842, the French Flag was introduced into the upper canton of the Tahitian colours and this amalgamation was called the ‘Protectorate Flag’.

In February 1843, upon the arrival of H.M.S. *Vindictive*, the former pure Tahitian Flag, which was also the Queen’s personal Flag, was added to, at the suggestion of Capt Nicolas, by a Crown in the upper canton so as to note both her Sovereignty and Presence. This Flag was hauled down from the flagpole in front of the Palace by the orders of Admiral Du Petit Thouars on November 7, 1843, and replaced by the Protectorate Flag, which continued to fly under the Queen and Pomare V. Upon the Protectorate ceasing and the sovereignty surrendered, Pomare V retained the right to fly this Flag before his Palace. Its Exit is here recorded.

In a letter dated May 9, 1893, written by M. Poroi,<sup>257</sup> a Privy Counsellor and a resident of Papeete, addressed to M. Chessé<sup>258</sup> — one time the Governor (1879–1880) and who brought about the enrollment of Tahiti as a French Colony, but was, in 1893, Tahiti’s delegate at the Chamber of Deputies in the Homeland — the following interesting remarks are met with. They refer to the handing over of the Tahitian Flag to the Governor after the death of Pomare V.

### Excerpts

(A Translation)

Pomare V having died the 12<sup>th</sup> of June 1891, his obsequies took place on the 16<sup>th</sup>. The Flag which he had the right to fly was hung at half mast at his death and remained in that position to the day of the internment.

On the 17<sup>th</sup>, on leaving Government House, I heard, when upon the Rue du Rivoli in front of the Palace, a group of natives from the District of Teaharoa say one to another, “What should now be done with the Flag at half mast? It ought to be hauled to the masthead.” I went on my way, but those words caused me to think deeply. I thought of the fault that had been committed on the day of his internment in not lowering the Flag with which to

---

<sup>257</sup> Adolphe Marouo Theophile Poroi (1844–1918)

<sup>258</sup> [Henri Isidore Chessé \(1839–1912\)](#)

envelope the coffin, but that mistake having been made, it could not be remedied. I asked myself, Who should now lower the Flag? It shall not be the flame to light up a civil war.

He had met that day some Chiefs both of Tahiti, Moorea and the Tuamotus, who talked wildly of demanding that Prince Hinoi, the adopted son of the childless King, should be made the 'Head of Tahiti' in place of the King, who, upon his abdication in 1880, the French government had consented should bear the courtesy title of 'King' till his death, together with the right to continue to fly the Flag of the Protectorate at a flagpole before his home.

I kept silent till the next day, when I sought Hinoi in his house on the Rue des Beaux-Arts, where I found him in conference with Aitoa,<sup>259</sup> the Chief of Paea. I laid before them the necessity of lowering the Flag ourselves and by such action doing homage to the government of the Republic through means of the Governor.<sup>260</sup> The two having approved my suggestion, I charged Aitoa to gather the Chiefs together at two p.m. and accompanied by Hinoi, I repaired to Government House.

I there expressed the desire that we should ourselves lower the Flag and that there be given to the ceremony a character of solemnity, and be made an official ceremony by the presence of troops and officials.

The Governor having agreed, the ceremony was fixed for three o'clock that afternoon. I had still some struggle to bring over the Chiefs to this action; he who made the most opposition was the Chief of Mahaena, but I overcame his resistance.

At the hour stated, the troops and the officials being present, the Chiefs gathered together at the foot of the flagpole. Prince Hinoi took hold of the cord and lowered the flag. Chief Teriinohorai could not restrain his emotion, embracing this emblem of disappearing Royalty. Then, rolling the Flag and tying it, he gave it to Prince Hinoi to hand to the Governor.

In a few words I recalled to the assembly that this Flag had floated upon our islands since 1842, that it was not possible that we should behold without emotion the disappearance of this witness to our history of the past fifty years, but we remitted it with confidence to the Representative of the Government to be conveyed to the Mother Country as a symbol of our feelings of devotion and respect.

Prince Hinoi, having taken it from my hands, handed it to the Governor, who gave thanks in a few words and charged M. Dupré, Commandant of the *Vire*, to convey it to the President of the Republic.<sup>261</sup>

## CLOTH MAKING (TAPA) AND MATS

Native cloth was made from the paper mulberry tree. Some twelve or fifteen months after planting, the tree is cut down, the bark peeled off and soaked for a couple of days in water. The outer or brown bark is then separated from the inner or white and the woody parts of the latter removed by scraping with a special kind of shell. While yet damp, this clean white bark is beaten out and reduced to a very soft texture. The bark is detached from the tree in strips of from three to five inches wide, but by scraping and beating it is spread out to some ten inches and so thin it as to be transparent. Several pieces are then put together, over each other, according to the thickness required, arrowroot being used to cause them to stick together. These strips are then placed together in the width that may be required and again beaten to form but one. The whole is then dried in the sun.

The printing of the patterns is done by stretching the cloth over a large board on which are previously fastened the ribs of the coconut leaf and while thus spread out is rubbed over with a reddish brown juice obtained from the candlenut tree. This juice marks the cloth only where the ribs of the coconut raise it. To make the larger patterns and figures, the cloth is stretched on a grass plot and painted with a brush made from the stem of the coconut leaf, the same juice being used. If various colours are required, various ingredients are mixed with the juice.

The beating is done by placing a strip of the inner bark on a log of wood and thrashing it with a small piece of ironwood some three inches square and a foot long, water being constantly applied.

This was work allotted almost wholly to women.<sup>262</sup>

### Mats (Ordinary)

These were made, and still are, from the leaves of the pandanus tree, dried and cut into strips of various widths, according as required, which are scraped to the thinness required and then plaited together, the ends neatly woven into further strips till the needed length is obtained.

## THE PALOLO

This strange edible sea-worm haunts coral-reefed South Sea islands alone, nor is it everywhere amongst these. I heard of it when at Pago Pago (American Samoa) and at the New Hebrides. Unfortunately, I was not at either Group at the season of the Palolo's rising. This is one of the most remarkable occurrences in nature. Once a year and only once, this elongated worm, running from two to three feet, thin and centipede-like legs, makes its appearance and is always exactly on time. The natives, who consider it one of their greatest delicacy with its flavour of crab, look eagerly forward to the day. They have never yet been disappointed. They calculate the Rising as follows. When a small edible nut breaks into flower in October, then three days after the next full moon, a small red sea-anemone puts in an appearance, together with a small fish resembling a lizard. The next day, the small-sized Palolo appear and forthwith all disappear. Six nights after the next full moon in November comes the climax. The huge worm rises to the surface of the coral in their untold millions, just for twenty-four hours, then disappear, nor is one to be ever seen until another year to the day has come. Such is the happening as I learned at Pago Pago; there are probably differences in details elsewhere.

## THE *BOUNTY*'S BIBLE

Long but fruitless has been the search by individuals, libraries, museums for that volume which was the one supposedly that brought about so remarkable a change in the rough mutineer, John Adams, and the consequent establishment of a model community, which amazed Pitcairn's first outside visitors and largely wiped off the record the violence which brought it about.

But was there a special *Bounty*'s Bible and, if so, did Adams have the care of it? The following facts may be of interest. His (or Her) Majesty's men-of-war were undoubtedly, as to this day, supplied with a hefty volume of the Scriptures. Those that the writer has seen bore the name stamped on it of the vessel. Chaplain aboard had the care of it for use at the Sunday morning Divine Worship. But the *Bounty* was not a man-of-war; it was H. M. Armed Vessel *Bounty*, nor had it a Chaplain. There was undoubtedly a Bible aboard for Bligh's use and that it was used perhaps with other copies is evident from the mutineers' record shortly to be quoted. What its character was as to size and binding none can now say, nor if it bore stamp upon it.

Bligh, cast adrift off Nomuka in the Tongas, bore off only his Diary, his Commission, a Sextant, a 'Daily Assistant' and the clothes he stood in. His official copy of the Scriptures remained onboard. Christian, the leader, carried it back to Tahiti. On arrival, the party of twenty-five broke up amicably — nine elected to seek safety in flight; sixteen decided to remain and take their chance. There was a division of goods and supplies. The nine took the ship; the sixteen got all from it that they required. Did they get, or did Christian, the master's mate, get Bligh's copy of the Scriptures? There were evidently other copies onboard, for Morrison's Diary of the life and doings of the sixteen on Tahiti is very clear that the old naval custom of Divine Worship on Sunday mornings was a habit that they refused to cast aside and Divine Worship required of necessity the reading of the 'Lessons' from a Bible, even if they had failed to secure a proper Prayer Book. Here is his witness as to the Headquarters at Matavai (Point Venus):

On a square piece of ground raised above the level, we fixed a Flagstaff to hoist the Colours on Sundays and having appointed Divine Service to be read on Sundays, everything seemed right.

And again:

We kept the holidays in the best manner we could, killing a hog for Christmas dinner and reading Prayers which we never omitted on Sundays.

It would appear that besides a Bible, they had actually a 'Book of Common Prayer' amongst them. If they, not Christian, possessed Bligh's copy of the Scriptures, two possibilities arise. When the *Pandora* arrived and gathered them in, all but two who were dead, they could not possibly have carried off the Book or Books they had with them for they were ironed hand and foot, cast into that appalling contraption called 'Pandora's Box' — fourteen men in a space 18 feet by 11 feet, with a scuttle hole atop 20 inches square to lower them through — their possessions left ashore. If, however, Captain Edwards, prompted by the *Bounty*'s former midshipman, Hayward, who was his third Lieutenant, gathered in their Bible (or Bibles) used by his former Chief aboard, as he certainly gathered in Morrison's Diary notes, the crash on the Great Barrier Reef may have seen its (or their) end when the *Pandora* was hopelessly wrecked, lives lost and but scant preserved, most fortunately amongst it, Morrison's notes.

If on the other hand, Bligh's copy (and others) were left behind, they were held sacred by those native women who were mated with the captured and for all time lost to view, for that was in 1791 and in 1797, the missionaries arrived and took up their residence at Matavai, but not a word is recorded by them of the Sacred Scriptures as left behind, which would have been a delightful subject to oft times dwell upon in their Journal by those ardent men of God.

So we must turn to Adams and his copy, whose so ever it was that he read, learned from, changed his life's lines and ruled by, along with a copy of the 'Book of Common Prayer', which his record shows he had and used with his Bible on Sundays. Let us presume that the long sought for Bounty's Bible was on Pitcairn. If Christian had held fast to it when the parting with the sixteen occurred, his death by violence gave Adams, the last of the white men, the rights to it. In 1856, the whole community (194 souls) were conveyed in a brig to Norfolk Island with all their possessions; Pitcairn was denuded. Among these folk was their Chaplain, Parson Nobbs, who, if anyone, would be most likely to have the precious volume in his baggage. There was just a chance that Adams' children may have held fast to it. So far well. But in 1858, some were homesick and the Young and McCoy families returned to Pitcairn. Again, in 1863, members of the Christian family, along with Mills and Buffets, sailed for Pitcairn. Did the volume sought for go back with these? Hardly likely, as no Adams returned who might have held the copy, if not Parson Nobbs. Here then was a clue which should be followed up.

The writer's roamings landed him at length on Norfolk Island, where forthwith he took up the hunt. The then leader of the islanders gave him hearty welcome and gave him likewise the glad news, "We have it." Where kept? "In the Post Office Safe." Can it be handled? "Most certainly. Come." The safe was opened, the Sacred Scriptures lay in my hands. But alas! Bad news should be ever given courteously and not abruptly so as to shock. I turned the cover for the flyleaf if perchance an inscription was penned thereon. There was. Its owner had been neither Government nor Bligh, nor Christian nor Adams nor Nobbs, but Adams' son, evidently a gift from his old father, the date when the lad was young.

This is easily accounted for. When Pitcairn's inhabitants were first made known to the outside world, great interest was aroused in the Homeland, especially by religious folk as to that model settlement, and Queen Victoria, when she reached the Throne, gave orders, to show her warm appreciation, that the next British man-of-war headed thither must convey from Her rich quantity of books of religious character, together with Bibles enough for all. These Bibles were exactly similar to those of the writer's young days — too far back to dare mention — published by the 'Society for Promoting Christian Knowledge', their price One Shilling. I broke the news gently, whether the islanders believed it or not is their concern, not mine. Ought we for very soreness to blame Parson Nobbs for carelessness? Norfolk Island was a failure anyway; one hope yet remained and had to be followed up: that great emporium of Polynesian literature, the Mitchell Library in Sydney, N.S.W. That was now my mecca. I duly made it. The Head Librarian was kindness itself as he gently broke the news to me. "The *Bounty's* Bible? Alas! We have sought for it high and low for untold years and continue so to do. Your information is most interesting and valuable, but persevere, a lone man may accomplish what Institutions fail at." I have; I shall, but so things stand today. And I have my doubts if there ever was of a truth, an Official *Bounty's* Bible.<sup>264</sup>

## PART XIV

### TAHITIAN VIGNETTES

BY

REV. WILLIAM WASHINGTON BOLTON, M.A.

### PREFACE

The original text of *Tahitian Vignettes* is stored in the Mitchell Library, State Library of New South Wales, Sydney, Australia, as Volumes 3 and 4 (Call numbers A3359 and A3360) of the Bolton Papers (Collection 1–7A).

Three of the contents of this volume also appear elsewhere and so have not been transcribed here: *The Mystery Stone of Tahiti*, *The Bounty's Lost Anchor*, and *A Tahitian Garden*.

These volumes are available on microfilm (CY Reel 4992). The text was transcribed from scans taken from the microfilm and provided in a PDF file.

## MY CANARY BIRD

We called him that, but he had no song in him. The little town of Papeete was crowded with tourists; every hotel and boarding house was overflowing with them. A stranger to me, he craved hospitality and in a moment of weakness, I invited him to share my home, i.e., its upper flat, from which no finer view of lagoon, of sea, of mountains, together with the steady breeze of the Trade wind, is to be had on the waterfront of Papeete.<sup>2</sup>

He assured me that he loved Quiet, that he carried no gramophone in his baggage, but only a mouth-organ, or harmonica, as he called it, which he would never exercise upon save when I was out. He most kindly named his tunes ‘Abide With Me’ and ‘Way Down Upon the Swanee River’.<sup>3</sup> I had my doubts with so weird a mixture.

But what most distinguished him was his love of birds. He had come from China by way of Australia and had brought with him no less than 8 and 40 canaries. They would give me, he said, sweetest song throughout the day, but from sunset I would never be disturbed. Three ample cages held them, and a large wicker basket, at first a mystery to me, together with many sacks of seed, completed the outfit. So Man, Birds and Trunks galore invaded my ever quiet quarters.

As to the man himself, he was of fair height, rotund, bald headed and of genial mien, in his early 60s as to age. A lover of the sea, bathing therein was, next to canaries, his hobby. He was in it an hour after he landed on me with his goods, and morning, noon and eventide, he was swimming close of my foreshore. The sea was in his blood, for I learned that he had served from his early years in the U.S. Merchant Service, and had been drafted into the U.S. Navy in the stress of the Great War. He had now retired and had accumulated ample means to go a-wandering.

But hunting the dollar was still an aim with him, and Books and Birds were the means. Those canaries, I found, were not only his Joy, but he was out to sell them and that huge wicker basket held two score wicker cages to be put together as occasion required.

For a sailor, he was far from handy. Upon me fell the task of arranging the cages to be best advantage of those canaries upon the balustrade of my verandah. What Papeete folk thought of the reserved Englishman, whose Home was his Castle, suddenly turning into a bird fancier, I cannot say, but it was a nine days wonder till the facts were out. Though many stayed to gaze aloft, none approached to purchase. Of song, I was disappointed. Of all the crowd, there was but one who let himself go and he but intermittently.

Things went smoothly for a while. Weeks passed. Then came a day when he did not go a-bathing, but kept close to the verandah, poring over literature and two handsomely black covered books. I am not at all of an inquisitive turn of mind — in time I might perhaps gauge his mental grade; if not, no matter.

He missed his meals outside at the hotel not far away, taking only his Petit Déjeuner of a morning when my own was brought me. Naturally, I asked him if he felt unwell; if I could do aught for him;

<sup>3</sup> [Abide With Me](#) is a Christian hymn. [Old Folks at Home](#) (also known as ‘Way Down Upon the Swanee River’) is a [minstrel song](#) written in 1851.

if I should even call a doctor. He was not ill; there was naught to do, nor would he hear of medicine, hospital or doctor.

Then he took to his bed and many days passed whilst he kept to it. Upon me, therefore, fell the task of looking after his canaries, feeding, bathing, cleaning and keeping my verandah free of feathers and wasted feed. Never had I dreamed that birds could be so wasteful, seeds covered the floor, and, wafted by the breeze, feathers and husks gave me an endless task. The broom was ever in my hands, for I was born tidy.

In addition, I was nurse now, and all the many duties attached thereto, of which I was a perfect novice, fell to me. I could see that he was in pain, but when I spoke of it sympathetically, he emphatically denied it. I was non-plussed. Here lay a really suffering man and he disclaimed it, and a doctor he refused to see. So I resorted to subterfuge.

A well tried friend, whilst not a professional man, had a great and well deserved reputation among the Tahitians and many white folk for his remarkable healing skill. An American, he was the man for me and my canary bird in his cage. We laid the plot. He was to call upon me and I was to bring the two Americans together on the ground of common citizenship. They met, the one prostrate abed, the other to attempt a diagnosis.

The preliminaries went off well, then came the subject of health and regret at a stranger sick in our midst. But Canary Bird was not to be caught. He scented danger and well nigh demanded to know if his visitor was a doctor. With truth, he could say he was not. But our bird was not singing anymore, he was perfectly well and had no pain whatsoever. My friend was at a loss, but on parting with me, suggested that possibly he was having trouble with his liver.

Then next I turned to his Consul. He came right willingly and did his best to get the man to tell him of his trouble, but he was Mum. The Consul could make nothing of him, but, good fellow that he was, insisted upon sending, daily, tempting food from his own table. I laid the bounteous repasts within his reach and from time to time he cleared the platter. But not always. He had his good spells, but more often, they were very, very bad.

It was now that he asked me to wire Sydney for him. I sent several short messages day after day. They astonished me. They were addressed to an Army Colonel and I was forced to read them. "Great pain." "Pain severe." "Pray for me." It surely will be forgiven me if, in my simple ignorance of facts, I mentally placed my sick man as a liar, but he got no inkling of my estimate.

It came now that I had to arrange, not only his bed, but his books and papers so as to be within his reach, since he could scarcely turn himself. The truth was out, though not even by a flicker of the eyelid did I show surprise. His two black books were the Bible and M<sup>rs</sup> Eddy's <sup>4</sup> ditto for her followers; his prayers were bundles of the Christian Science Monitor. So my Canary Bird was a Christian Scientist <sup>5</sup> and hence, though he was often in torture, he had no Pain and a doctor to him was, of course, the Evil One himself.

So I was in for it and perhaps have a dead man on my hands. It was some comfort to learn from the police whom I consulted that I should not be held responsible. It was strenuous work now; day and night I was at his beck and call. My friends grew indignant at what they called the gross imposition, with a hospital round the corner, but I was out to see the matter through. Beside, it was what I

---

<sup>4</sup> [Mary Baker Eddy \(1821–1910\)](#)

<sup>5</sup> See [Christian Science](#).

delighted in, a new Experience. I fancy that I made a fairly good job of it, all the easier since I had no medicines to hand out.

It was getting on for many weeks now and what with the canaries and the chief one, Himself, I could not quite see how all would end, when one night at 2 a.m. I was awakened by his call. He could faintly gasp, "Get a doctor." He had my ready promise. I went out into a pitch dark night in quest. There are doctors and doctors. I must speak the truth. I made straight for the best. The old rascal was out — at a dance! Could I wait? No thanks. I made across the town for the next best. With much hammering, I awoke the household. He came. I told him of the need. "I will *certainement* not come at this hour. Take this. Thirty francs. Thirty francs." I asked him what to do with some capsules. All I got was, "I won't come. Thirty francs. Thirty francs." I well nigh flung the paper money in his face, not in wrath, but in disgust, and went home.

Ignorant of medicines, as was also my sick man, we hesitated at his swallowing the unknown things, so I went forth again. This time I got the old rascal; he came willingly, hot from a bed he had just fallen asleep upon. I mentioned M<sup>rs</sup> Eddy's book. Said he, "I know that crowd, my dear friend. Leave him to me." He beat me to it, for he went on bike whilst I was afoot. I found him at the bedside as he was making his diagnosis. "Let me feel you here." A groan. "Now here." A groan. "Now here." Another groan. "My good Sir, you are suffering from a very severe attack of acute Sciatica." <sup>6</sup> Then a syringe got to work, whereby he got relief, and I also, to both of us most welcome.

But now that he had 'tasted blood', he was avid for more and still more. No words of sound warning from the downright doctor availed to stay his appeal, and to me, to prove his right to it, he produced his 2<sup>nd</sup> Bible and bade me read the truly astonishing statement that though there is no such thing as Pain, yet when it becomes excessive, beyond all human power to bear, it is justifiable to call in that accursed one, a doctor, and take Morphine.

My Canary Bird was singing very low to himself those long, to him, wearisome days which followed. There was happily a steamer heading for San Francisco due in a week's time. He had thought to stay for many months yet on Tahiti, but he had had enough. He would fain go Home. The genial old doctor pledged me that he would get the man off, even if he had to be carried aboard on a stretcher, and he kept his word. He plugged the Canary till he dared plug him no more.

The mail boat at long last was alongside the quay. The canaries had gone, purchased *en bloc* by a friendly merchant made in happier, healthier days. I had packed his trunks; an auto waited below. True to the minute, the doctor appeared; one more 'shot', full measure, as he nodded to me, and perhaps running over. "How feel you now, good Sir?" "Fine," was the answer. "I can stand again." Downstairs he went, my arms supporting him, into the auto and so to the quay, nor did I leave him till I had him safe in his cabin well below deck, then stood upon the wharf till that boat cast off and headed out to sea with my Canary Bird aboard.

No word has ever reached me from him since that day. <sup>7</sup>

---

<sup>6</sup> [Sciatica](#) is a set of symptoms including pain caused by general compression or irritation of one of five spinal nerve roots of each sciatic nerve. Symptoms include lower back pain, buttock pain, and numbness, pain or weakness in various parts of the leg and foot.

<sup>7</sup> See Tale #90, *Of My Canary Bird*, in Part IV, *Tales of a Roaming Grandfather*, for a somewhat shorter version of this story.

## THE STORY OF PAPEETE'S NAME

Matavai, with its bay, was of ancient lineage; the Papeete of today, with its harbour, is of modern parentage. There was a Pass for vessels into the bay, as the Barrier reef opened a way, ever dangerous as Wallis found in 1767, when he stranded for a while on the submerged 'Dolphin' rock. There was a Pass to be seen into the harbour, but too narrow for safety, so thought the captains of the earlier vessels who sailed hither, and none, even Cook, dared venture it till the ever daring whalers appeared in these waters and made it despite the risk, and showed the way to others.

Matavai and adjacent Arué were the headquarters of the High Chief of Paré, which covered the entire northern portion of Tahiti and ran for many a league southwesterly along the shore till it reached the District of Faaa. Under him were Lesser Chiefs taking charge of the various sub-districts over which he ruled.

The last such district before reaching Faaa was distinguished above all the rest for one single feature: it was the site of the Nanu, an astonishing native building as to size, capable of holding 1,000 natives; the Assembly Hall of Paré, where oratory and dancing, wild orgies and Plays by the Arioi Society of both male and female actors were held as occasion required. It was this building which gave its name to the waterfront on which it stood. That site was 'Nanu' to one and all on Tahiti.

Usually Nanu had but a handful of resident natives, whilst Matavai and all the rest of Paré were densely inhabited. But Nanu crowded when call was proclaimed for a meeting in the vast Hall; visitors poured in from all quarters, even the island of Moorea, across the fifteen mile Strait, never failed to join in the debates and festivities.

The waterfront itself consisted of seven sections of the land, which ran back to the foothills, the possessions of important native Families who lived elsewhere. One of these Sections known as Vaiété — Tahitian for 'water basket' made of coconut leaves to carry home the gourds of fresh water from a spring of luscious water on the property — belonged to the Pomare Family. And Nanu, the whole waterfront and the site of today's little town would doubtless still be called so by all but for certain events now lightly touched upon.

Christianity was gradually triumphing on the island, the Pagan forces furious. A clash was bound to come, and Paré's High Chief Pomare II, siding with the Christian party, though himself a pagan, defeated, fled for safety to Moorea. Here for some years he laid low. Shortly after the turn of the century, he astonished all by declaring that he would be a Christian and the Leader of that party on his homeland.

He returned with large force from other Christianized islands nearby and was prepared this time to fight it out to a finish. Opuhara, the High Chief of Papara, was the Pagans' leader. Pomare or Opuhara had to die. The clash came at Punaauia, south of Faaa; Opuhara lay dead on the field of battle; and Pomare was Paramount Chief — Tahitian word for 'King' — of the island.<sup>8</sup>

During his absence on Moorea, much had happened to Nanu. Whalers had found out the trick to master the entrance to the harbour and all vessels had deserted Matavai for the safety of the placid lagoon. Here they discharged their cargoes; here they repaired their ships, rested ashore and held high revelry. The homes of natives had multiplied; the incoming white traders had raised their store houses;

---

<sup>8</sup> See Chapter VII of Part IX, *Old Time Tahiti*.

Tahitians from all over the island had come to Nanu for trade with the white man, in place of Matavai as of yore.

Pomare was not going to be left out, high and dry at Matavai or Arué. Nanu was his Mecca and he was no saint, though in name, a Christian. Revelry and Rum were where he sought to be. He had property there. He built himself a house, installed his family and stayed.

With seven different names used by the white folk where stood their stores and homes on the various Family sections, confusion in business relations with those at Home was bound to follow. One gave his address as Nanu, another as Faré Uté, another as Arupa. There was but one solution, to drop the lot and give the name of their King's property as the name for the site.

But in every conversation, the 'Vai' of its name could only be used for 'water' by the Great; the common people dared not use it for such purpose, under pain of punishment, their word for 'water' being 'Papé'. So Vaiété had to become Papéété, and Nanu, once the home of but a scattered few, grew till the latest census, now some years back, gave between seven and eight thousand folk, and has become the interesting capital of Tahiti under its more modern name.<sup>9</sup>

---

<sup>9</sup> See also The Beginnings of Papeete in Part IX, *Old Time Tahiti*.

## A FALSE SCARE

Two huge stone idols are now standing in Papeete's museum grounds, but the names of the gods, no native knows. Those ancient and towering effigies had stood from time out of mind in the dense forest of the interior of the island of Rai-va-vae, one of the islands of the Austral Group, 100 miles and more south of Tahiti.

Their removal had the consent of the Governor of the Colony, without which it could not have been done, but it was far from being welcomed by the natives either of where they stood or by those of this island whence they were brought. Though Christian in name and profession, the awe and terror of the old gods still grips these people.

Raivavae was and is to them the special residence of the fierce Sea God Ruahutu. Impressed upon their memory is the legend, but to many of them the truth, of how two fishermen, casting their net into the deep, where, unknown to them, the god was sleeping, entangled it in his hair. The god, aroused, rushed to the surface and in the tempest of his anger caused the sea to rise above the mountain tops of the islanders' homes.

When these huge idols were safely landed at Papeete, the whole native population was in a highly nervous state of mind. Some predicted a devastating tidal wave and even went so far as to have their moveables packed up in readiness to make for the mountains. When, a few days later, flashes of fire were seen issuing from and playing upon the waters of the harbour, real terror prevailed; the fiery old god was preparing a volcanic eruption.

On top of this, the man who above all others had counselled the removal of the idols and had conducted the removal and brought them safely to their landing at this port, fell desperately ill. The old sea god had clearly given him 'What for' for his daring to steal his images.

Natives became desperate, scared so greatly that there was strong talk of petitioning the governor *en masse* to have these idols returned at once to the forest they came from.

The days passed harmlessly; they mounted into weeks and neither hurricane nor volcano appeared to disturb peace. The sick man became the centre of interest; a steady crowd kept close watch over his home. Would the fetchers and carriers of the great god Ruahatu do his work for him with this plunderer? Despite their fears — perhaps their hopes of well merited punishment — the sick man stood upon his feet again.<sup>10</sup>

But those flashes of flame upon the waters! What could they possibly mean but some supernatural action. Then into the harbour a schooner came and its Captain, a native, when told of the wonder and the Scare, blandly remarked that on leaving he had tossed overboard a pot of phosphorus and flour, the mixture he and others use on schooners to poison insect vermin all too prevalent aboard those vessels. The phosphorus, coming in contact with salt water, had generated a gas which ignited as its bubbles burst on the surface of the lagoon!

---

<sup>10</sup> The man who conducted the removal of the idols in August 1933, Steven Higgins, died not long thereafter, in 1935. The history of the tikis (in French), including five other deaths attributed to their removal from Raivavae can be found [here](#) and [here](#). They are named *Moana* et *Heiata*, after the name of a sacred site on Raivavae, *Moana Heiata*.

The natives collapsed as also did the Scare; Ruahatu had failed to come through with his part of the business. Papeete held his images and meant to keep them, now not a soul protesting.<sup>11</sup>

<sup>11</sup> See also Tale #80, *Of a False Scare*, in Part IV, *Tales of a Roaming Grandfather*. The idols, or tikis, from Raivavae can be seen in a photograph of the Tahiti Museum in Tale #16, *Of Oro and Others*, in Part IV, *Tales of a Roaming Grandfather*. The two *tikis* were transported from Raivavae in the Austral Islands to Papeete in 1933, when WWB was living on Tahiti, where they were exhibited until they were moved to the Gauguin Museum at Papeari in 1965. By November 2014, when the photographs of the Raivavae *tikis* below were taken, the Gauguin Museum had closed permanently, with only these and two other *tikis* remaining.

## NOUNS, NAMES AND NEGATIVES <sup>12</sup>

Tahitians were hard put to it when white men first came amongst them — and still are so — as to giving Tahitian names for articles foreign to all their previous Knowledge. They were forced to coin them in compounds and the end is not yet, as man's ingenuity produces something new.

Here are a few samples picked at random:

Singlet	Thing close to chest
Trousers	Covering for the pillars of support, i.e., the legs
Measles	Sickness of soldiers, first seen on them brought from France
Accordion	Musical instrument repeatedly pulled
Steamer	The ship of Fire
Automobile	The carriage of Lightning
Aeroplane	The ship of the Heavens
Saloon	<i>Faré hooroa Uaina</i> , The shop for Wine

That middle word looks strangely like “Hurrah!” — a hearty welcome to thirsty one to enter and enjoy, but Alas! experts in the language deny such natural import, and outsiders like the writer must sorrowfully conform.

With some measure of truth, Wales is said to have a special liking for long names, both of places and individuals. But Tahiti can give it a very long start and beat it handsomely.

The 1<sup>st</sup> Pomare had the terrifying name of *Tunuiea'aiteatua*. He commonly, however, was called by its first two letters, *Tu*. But the writer has come across others even more terrifying, some on tombstones here and there, others of folk still living and proud of them. A few ‘tongue twisters’ will surely suffice:

*Haamanahiaamaheanuami*

*Moeterauritetupaiahauviri*

*Airaroatuateriirourumaonateraitepomateao*

And the champion so far come across:

*Hinaariitetuanuitera'ipoiaitearataiiafaanuievau*. 46 letters!

We white folk are surely very modest.

---

<sup>12</sup> See also Tale #6, *Of Bungled French*, and Tale #24, *Of Coined Words (1)*, in Part IV, *Tales of a Roaming Grandfather*; *Pot-pourri of Tahitian History* in the 16 April 1940 edition of the *Pacific Islands Monthly*, pages 34–36, in Part VII; and *Tahiti Vies With Wales* in Part IX, *Old Time Tahiti*.

It is wise to be wary in the use of other language than one's own unless an expert in it. Not only confusion, but, at times, serious and, at other times, amusing negation follows.

A stranger, a lady tourist from the U.S., called upon the writer some years back seeking information as to certain points in Old Time Tahiti's history. These were gladly given. Before leaving she said that two matters had much interested her as she roamed around the little town, and would I help her to a clearer understanding?

(1) Who, she asked, was that evidently wealthy person who owned so much property scattered in and around Papeete. She met his name on all sides and painted on wood placards at that. His name is Mister A. *Louer*. Madam, I courteously replied, it is evident that you are a foreigner to the language of French. It is no name of a large owner of property, as you suppose, but a sign such as is used in your country stating that such and such property is "TO LET". Dear me, she said, what a surprise you give me. There is yet another, if I may further trespass on your kindness.

(2) It is very strange to me that in so small a community there should need to be a "Home for Infants". Are Tahitian parents so callous as to part with their babies or is death so frequent? It is a large fine building standing near the Colonial Prison and a large signboard faces the Highway at each end with its name "Ralen-teer" and the additional wording "Orks Infants", as she pronounced the words. I replied that here again, she was at fault, quite innocently ignorant of what those signboards announce. That large building is a Day School, and careful for its careless boys and girls, the Authorities make appeal to the wild drivers of autos, carriages, trucks and carts to have a thought for the Children, to slacken up, to moderate your speed, to "*Ralentir aux enfants*".

With many thanks for useful aid, she left me.

## MY FRIEND

He had arrived on Tahiti only a few months before my own landing. We were naturally at once drawn together, both because of our common nationality — he of the north of England, I of the south — and that each in our youth had been somewhat prominent athletes. Though I had antedated him by a few years, nigh a half dozen years his senior, he had strangely treasured up memories anent me and welcomed in our Old Age personal acquaintance. Enthusiasm for Sports still burned brightly in us, so interests both past and present bound us very closely together.

But our objectives on Tahiti were widely different, his for the free and unbridled life, after long years of officialdom and red tape, mine for the study and quiet enjoyment of native life and nature in its tropical beauty. He had before him the long record of human wrecks this isle has witnessed, but he would go his way. He had fallen in with a swift crowd, and could better than most of them bear the expense. He drank heavily and steadily, and took to himself the daughters of the people.

It was not long before he acquired the lovely spot, some dozen miles from Papeete along its foreshore, which he made his home. There he soon made the fatal mistake of being the Bountiful One of his village. Liquor flowed and largess was handed out in gifts or kind — ‘fatal’ because once begun, it must be continued to the end unless native friends are to be turned into neighbours, aggravating and obnoxious, well nigh past bearing. So nigh three years passed.

Then, suddenly, he stopped, took his chances and lost. After many a failure, he met Her, who had herself reformed, and from that day a great change came. In some strange way, she altered him. He gave up Drink and became devoted to his charming home. She was a very slave to him, anticipating every wish and want. Their home life I knew full well, being ever a welcome guest, and it was ideal for him after years of rough going. He knew her worth and poured out his gratitude as he spoke of her to me. All was bright then; he had yet to learn of her hidden strength and spirit in the dark days to come. But though, to my great joy, he had reformed, those first years of foolish riotous living were to have their Aftermath. They alone can explain the tragic End.

There came a day when he, freed from all desire of Drink, left home to visit a neighbour, an American since dead, whose fine bungalow was a short half mile away. They had been warm friends in the wild days, but some business trouble had estranged them. The difficulty had been patched up and all enmity had passed.

It was sunset after a broiling day and on arrival, he found a half-caste Sea Captain, since dead also, with the American, and both were well ‘soaked’. The former had come from the little Capital with the view of raising a small loan of cash from his friend, who was as short of funds as he. Immediately on the latest visitor’s entry, the American exclaimed “Here’s the very fellow, has pots of money — he’ll fix you up.” But the Captain’s record, despite his wonderful charm and breeding, was well known for his inability to conserve cash, and always an irritable, hasty man, the newcomer, bristling at this challenging greeting, flatly refused. Hot and high words passed and turning abruptly to leave the house, one of the two men struck him on the back of the head with an empty bottle, a deep gash over the brain. Which of the two, he never knew, and I, who knew full well, never told him. Both were drunk and both are dead, and silence is oft golden.

The American’s mistress, coming on the scene, soon bound up the bleeding head and he returned to his home. With care, the deep wound healed and as time went on the matter was forgotten. He told me the whole story and let it go at that. But of a certainty, as will be seen, that was his Death blow, though the End was long a-coming.

As months passed, he oft complained to me, whom well nigh every week he called upon in town, of a strange pain in his left knee. It steadily grew worse. It worried him greatly, he an old time athlete.

He took a very long trip Home and parts of Europe — with Her. Things were no better on his return. He told me of his intent to visit Australia to see after his investments he had placed there and at the same time consult a noted osteopath in Sydney. The latter's diagnosis, so he wrote me, was quick and to the point: an injury to the head by some means, perhaps a fall. That cursed bottle had wholly passed from mind. He could only recall falls from bikes — those Penny Farthings of our youth — and the like from horseback in the Boer War days, where he served his country. Those were too remote. "Think again." He and She searched for light when suddenly she recalled the drunkard's blow. The osteopath was satisfied; the scar was still there on the semi-bald pate. That blow, he was told, had injured certain nerve centres and he was in for Creeping Paralysis. Gallant effort might stave it off, might even master it. Returning, he told me of his hapless fate and they diligently followed out instructions, but without avail. Steadily he grew more lame, limped heavily and before long, the leg shortened a full inch and with his lameness, his naturally and unmastered irritable temper increased a hundredfold.

The petty annoyances of his neighbours, whom, as already noted, he had shut down upon, grew apace. They took various forms. A man in the full vigour of health and strength would have either treated them with contempt or taken action to put an end to them. To him, they became persecution and he resented them fiercely, but hopelessly.

There came a Sunday and with it a wild orgy of drunkenness and noise hard by his home. It kept steadily on from morn till sunset, his protests, borne to them by Her, were scorned. If words were of no avail, action even in his crippled state might halt the carousers. His grounds were his castle and when he saw one of the crowd actually trespassing on his grounds, he held back no longer. Seizing his 'rook and rabbit' rifle,<sup>13</sup> relic of days gone by, he sought to intimidate, not to maim, but in his blind fury, the bullet went home, a mere flesh wound in the arm. But he had broken the law and with a previous warning from the Authorities to keep his angry hands off the natives, for he had soundly thrashed one in the past for some slight offense, he was left with no loophole for escape.

Things moved swiftly; a Summons to Papeete and the magistrate was all for committing him to gaol till trial came. His lawyer friend saved him from that ignominy. Straight from the Court, he hurried to me. I was shocked, not at the Happening and the near shave of gaol, but at the amazing and sudden change in my friend. His nerve was gone, a mental wreck, utterly crushed. Prison was on his brain. No words of mine could alter his belief. He was doomed. His Past, on Track, on field of battle with its Stripes of Honour, showed him up as a courageous fellow. It was unnatural and I had my strong suspicion as to what was the Cause.

He was still free to come and go, though forbidden to return to his home, so found a shelter in the residence of one of Her sisters close to town. He was now as a child in my hands and I brought him into contact with those who should know if my fear was correct. Folk scoff at native medicines and practitioners, and call it quackery, but not so, I. Their verdict was unanimous and my secret, never his, that beneath that foul Blow, a tumour had formed and was expanding. His brain action was not always under control and from time to time, the baneful thing smothered common sense. It was at such a moment that he used the rifle and at such a moment in the future aught else might happen. It did.

---

<sup>13</sup> A [rook rifle](#) is an English single-shot dropping block or break-action small calibre rifle for shooting [rooks](#) and rabbits.

It was my great privilege to be much with him as he passed through his long drawn out Gethsemane.<sup>14</sup> He leaned heavily. For all her splendid devotion and attention, she lacked something that Man to Man can alone supply.

The weary weeks for him dragged on, but at last the day of Trial and of Judgement came. We autoed up to town, where he stayed the night. Ere I left him in kind hands, he, like a very child, entreated me not to fail him on the morrow. I was early so as to relieve him of that worry. We were alone in the auto; he told Her to stay away; he wished to shield her from needless pain at the sight of him in his hour of ignominy.

His case being called, we stood together before the Judge, who, at first, wished me to retire, but I had scarcely reached the door when not only did he recall me, but, ordering a chair – all contrary to custom — to be brought, requested me to stand “by the side of your friend.” After witnesses had testified and the Court had been addressed by the defending Counsel and by the Court’s kindly request, myself, came Sentence. He was told by his lawyer that he must stand. He tried, but his wrecked frame failed him and he would have fallen, had not I, a taller man, gathered him and held him up in my arms. A strange scene indeed in a Court of Justice, but what a privilege for me, my friend in the darkest hour of his life and in my old strong arms. “Six days imprisonment — not actual, nominal only — and 200 gold francs Fine.” A shudder shot through him, but I held him fast. The Court called the next case.

Our chauffeur drove us back and I left him with Her. But the strain had been too great. The leading doctor in the town was hurriedly called in. He ordered hospital, and there and then would have been the End, but for Her, as once again losing all self control, he sought to hurl himself from the balcony, where lay his private sick bay, to crush out his life on the stone flags below. She saved him. I saw him a few days later ere he returned a free man to his home. I told him to call on me night or day if he needed me. He never did. He shut himself up for weeks, then months. She oft entreated him to call me down, but no! He said he was ashamed that I had known him as a free man, his name unstained and that man, not one who escaped prison by a hair’s breadth, must be my memory of him.

Then suddenly came the End; the cursed bottle completed its work. He was always clean shaven. He had often shown me his much prized Sheffield razors. Months before, he could have ended the shame that enveloped him like a cloud, but he had a grip on himself. Suddenly, as he was shaving at his accustomed daily hour, he lost that grip; self control lay paralyzed; he drew that keen edged blade across his throat, yet not quite deep enough to end all there. She rushed him to the hospital, where he lay for nigh a week, conscious and thoughtful of Her, but refused to have me at his side; shame held him to the last. I sensed it and found no fault with it; that his friendship had cooled and died was an unthinkable thing, the rather he denied himself because of his devotion. What more could I ask?

The grave was dug not in Papeete’s God’s Acre nor in that of his own village, but in Her’s, which lies between the two. Other calls held away his friends, so it fell to me to be the one white man as the wrecked body was laid away. I was jealous for my race; natives and half-castes alone should not pay the last tribute of respect to my friend. There actually were six men, fourteen women and the village Pastor present. We gathered at her sister’s house, thence went a-foot along the Highway to the native Church hidden in the woods. There was a reading of Holy Writ and prayer, then a woman broke forth into a native song, not a wail, but a rich-voiced Lament for their friend. Thence to the grave, dug at the foot of a towering coconut palm, whose ever gently waving fronds bending over shielded the site from a blazing sun. The brown men lowered the double-cased casket, the Pastor committing the body

<sup>14</sup> [Gethsemane](#) is a garden at the foot of the Mount of Olives in Jerusalem most famous as the place where, according to the gospels, Jesus prayed and his disciples slept the night before Jesus' crucifixion.

to the ground, not using Christian name or surname, which were quite beyond him to pronounce, but the one by which he was known to all, his own choice in the Past, “Trooper”, and the same singer poured forth fresh Lament to close the scene.

I stood by her side; she was moved to tears, but as she was led away by her sister, she turned to take one last look and gave one long, low, bitter cry in native tongue: “My Man — My Man — Farewell.”

So it was with My Friend. And what of Her? He left her the lovely home and land, large acreage beyond, all furnishing, his last bought car and a Sufficiency for life. Will she be wise or will she revert to her former mode of life? She is a pure native of limited education. The chances are all against her in such environment as hers. Time alone will show.

## LAKE VAIHIRIA

This sheet of inland water is the only one on the island of Tahiti and its remoteness and inaccessibility caused it to play no part at any time in the incidents of Old time. It lies some 1300 feet above sea level, surrounded by mountains reaching as high as 2000 feet above the lake. It is fed by numerous entrancing cascades, its waters finding for some distance a subterranean outlet, which later form a narrow tortuous stream — a torrent indeed after heavy rain — on its southwestern way to the sea a half-dozen miles away.

The lake is about a mile in circumference, possessing no defined shoreline, a long waist-high grass growing close to the water's edge. Its depth as found by French soundings is reported as 17 fathoms, 2 feet over 100. Its only fish are eels of a great size, their length running to 4 feet with a girth nigh a foot, whose fins, close to the head, give the weird appearance of large ears. Occasionally, one of the species is to be seen for sale in Papeete's market place.

The natives' method of crossing — apart from direct swimming, which all must do, for no canoe has ever, up to date, been upon its waters — is the making of a raft of the trunks of the Fei (the mountain banana), which grow abundantly around, on which supplies are placed and pushed ahead by the swimmer.

The lake is in the direct line of one of the few traverses of the island, Mataiea on the west coast, and Papenoo on the east. Reaching the lake from the former, after swimming across a short quarter mile, in ever chilly waters, the “hog's back” of a spur of Orofena <sup>15</sup> — the highest on the island — is climbed, on the further side of which are the headwaters of the Papenoo river. Following down this oft times turbulent stream, the mountains open out into the broad valley of that name and so one reaches the sea.

It is reckoned a two days journey if weather conditions are favourable. Caves en route are handy for shelter, and the writer found them so when, nigh 20 years gone by, he celebrated his 70<sup>th</sup> birthday, along with a New Zealander of far lesser years and two sturdy natives, by a crossing which took six days and five nights, for the clouds descended once the lake was swum, the heavens opened, the rains fell ceaselessly, the river was a deep, raging torrent, and stamina along with sterling companionship alone brought us through without a scratch.

Very different, however, was the fate of a young visitor, who, in pride of strength and self-confidence, essayed the crossing a few years later. <sup>16</sup> He would make it alone, despite all the warnings. The weather ideal, he made the lake, swam it, climbed the Divide and then... Days passed; a week, and he failed to return. An anxious sister in Papeete appealed for help. Two parties of natives started out, one from each end. They found him in the cave — haunt of the wild pig — at the headwaters of the Papenoo with a badly swollen ankle, without either food or water. Improvising a stretcher, the crippled traveller was carried out to Papenoo and hospital, a wiser man for a very close call.

---

<sup>15</sup> See also *Lake Vaihiria* in Part IX, *Old Time Tahiti*, and *Across Tahiti Afoot* in Part XIII, *Roamings In the Great South Sea*. In the former, WWB has the “hog's back” of a spur of Orafara, while in the latter, he has the Col d'Orufaaa.

<sup>16</sup> In *Across Tahiti Afoot*, WWB states that this incident happened prior to WWB's adventure, rather than a few years later.

## HISTORY IN STREETS

Until French occupation under the Protectorate of 1842, Papeete had but a semblance of order as to its outlay. Since then it has been steadily laid out in regularity and the domination of France has been written large in its Streets and Avenues. The history of the Long Ago has seemingly not appealed, though Wallis and Cook have been awarded a modest niche. The majority of the names are without meaning or significance, save to very few, but to those who can interpret them, they are a public recording of Men and Things and the following, it is hoped, may be the means of enlightening others as they stroll around the little town and seek to know what the naming stands for.

Rue Wallis calls for a special note. A street so named was laid out on the plan of the town — the very first street and its location appropriately opposite the Pass. Cook was given the second, but while ‘Cook’ was made and used, ‘Wallis’ was not forthwith made and became forgotten. Upon it dwellings rose. The writer called the Council’s attention to the matter in 1935 and to avoid litigation with the present-day owners of the dwellings and property on which they, in all ignorance, stood, a modest and newly made cross street of Hinoi Avenue at the extreme other end of the town was so named.

## PAURANIE

A quarter mile beyond the confines of the little town of Papeete, there is a narrow valley running down to the sea from the mountains at the back. At its foot runs the Highway round the island. Here, in the days of the War of Independence, the French erected a Fort (a Pa) and a Blockhouse, thus commanding the Pass exactly opposite and also both ingress and egress to the town, naming it Uranie after the man-of-war, which was playing so large a part in the struggle with the Tahitians. Now that all is peace, both Fort and Blockhouse have long since disappeared, but they have given their name to the valley, entwining, however, the two words Pa and Uranie, so that there are few today who know its history. Today it is Pau-ranie and the valley is God's Acre.

Here lie many of all nationalities who have Passed Out since nigh a century. It is tended beyond all praise and standing at its upper end and looking down the little valley, with its green sward and white headstones, its sides embowered with bush and trees, the deep blue sea to be seen beyond its lofty iron wrought gateway, with the breakers ever forming over the Barrier reef, is a picture that once seen can never be effaced from memory. Of those whose bodies it holds, I would note a few which may be of interest to others than those who reside nearby.

Close to the gateway, a railed-in mausoleum of block stone, black of hue, tapering upwards, rises above those lain below who died "pour la France" in the years 1844–1847.<sup>18</sup> Upon its sides are bronze panels bearing the battle names in which they fell and the ships which bore them to the fights. Besides the *Uranie*, there came from far off France the *Héroïne* and *Ariane*, the *Phaeton* and the *Charte*, the *Embuscade* and the *Meurthe*. The Tahitians put up sturdy fight for Liberty. Papeete and Papenoo saw combat, so also Faaa and Mahaena, Haapape and Taravao, Punaauia, Tapenoo and Taapuna, whilst Huahine, in the Sous-le-Vents, is on the list, for at Maeva the French, too, had loss. Thus, close to the Fort and Blockhouse, the first Frenchmen were laid, and their Resting place became the public Valley of the Dead. That was in 1847.

Across the grass-covered carriage way lies Robert Keable, <sup>19</sup> one-time Anglican priest and Author of novels. He came to Tahiti already marked for death and building himself a charming and luxurious home at the Isthmus which joins Greater and Lesser Tahiti together as one island, lived out his allotted time freed from the hidebound traditions of his motherland.

His close companion, a wounded airman who, like himself, served in the Great War and whom Death separated for but a week, was lain hard by, but my search had been in vain. His fate has been methinks that of many once laid in the valley. His grave was not purchased 'in perpetuity'. There was none to do him that service and the Charnel House, that gruesome abode upon the grounds, holds his bones. Here, grave space is freely given to indigents and leased to others who hope to pay. Five years, the span of time for each. That reached and funds delinquent, the graves revert to the City Council and are free to be uprooted should occasion demand. It is not often done, and never so if a Cross for a headstone has been erected over the dead.

There lies untouched the ashes of an English surgeon in his grave dug as far back as 1875. I would make sure that he should never be disturbed. Enquiry showed that there had been no payment 'in perpetuity', but that a Celtic Cross raised at the head had sheltered it and would continue so to do.

Well up God's Acre there is to be seen from any quarter an outstanding monument on rising ground. Its wide base has steps of highly polished mottled grey marble from which a column of as highly polished mottled brown, tapered like the Royal Palm — swollen half-way up — mounts high, supporting a Cross of the same brown marble with a large Figure of the Crucified Christ. Here lies Father Rougier, <sup>20</sup> one time an Abbé of the Roman Faith, but, in chief, a merchant Prince, as strange

---

<sup>19</sup> [Robert Keable \(1887–1927\)](#). According to [Tahitiens. Répertoire biographique de la Polynésie française](#) : Écrivain anglais. D'abord pasteur, puis professeur. Se fait un nom parmi les hommes de lettres en signant des ouvrages qui connaissent le succès : *Simon Called Peter* (1921) ; *The Mother of All Living*, roman africain. Vint finir ses jours à Tahiti, où il avait voulu retrouver la trace des artistes qui avaient éveillé ses désirs de voir la Polynésie : Loti, Stevenson, Caledon, Rupert Brook, Gauguin, etc. Se fait construire, à l'extrémité du village de Papeari, sur une petite éminence qui domine Port Phaeton, une maison à son goût : « It is a tasteful California-style bungalow, with bougainvilleas rambling over the roof and a palm court facing the ocean where the bluff drops sheer into the water... » écrit un visiteur. Keable vit là dans l'enchantement d'un beau site, amateur de fleurs et d'oiseaux. « Attention ! Ne tirez pas sur mes oiseaux de mer... Merci ! R. K. », a-t-il affiché sur la plage. C'est là qu'il écrivit : *Tahiti, Isle of Dreams* (1925), description de son paradis, et pèlerinage aux souvenirs des ses prédécesseurs ; et aussi *Numerous Treasure, A Romantic Novel* (1925), peut-être l'œuvre la plus délicatement écrite de Keable, et où il montre une excellente connaissance de la psychologie du Polynésien. On lui doit aussi *The Truth About Tahiti* (*Herald*, Melbourne, 7–14 April 1923) reproduit dans *Pacific Island Monthly Handbook*, 1923, p. 423–427. Il mourut à Tahiti le 22 décembre 1927. Son corps repose au cimetière de Papeete. La maison qu'il avait fait construire passera entre les mains de André Japy.

<sup>20</sup> Grave of [Emmanuel Rougier \(1864–1932\)](#) at Pauranie:

a mixture of a man as Keable lying below. Business notes him as one time lessee of Fanning Island, transferring from there to Christmas Island, a copra merchant, a hard man upon his labourers, not loved and yet respected by his equals. He left a Fortune and a large property on the confines of Papeete.

Nearby lies Marau,<sup>21</sup> the last Queen Consort of Tahiti. Married when fifteen, in 1875, to the worthless Pomare V and divorced by him in 1888, she lived her remaining years, and they were many, according

<sup>21</sup> [Johanna Marau Ta'aroa a Tepau Salmon \(1860–1934\)](#) was Pomare V's second wife; his first was [Te-mari'i-a-Teurura'i Ma'i-hara Te-uhe \(1840–1891\)](#). The top photo below shows Marau's grave in the form of the Mahaitea marae; see also *His Queen's Children* in Part IX, *Old Time Tahiti*. The bottom photo shows WWB's own grave in the Pauranie Cemetery in relation to the graves of Marau and Rougier, and the wall in front of the second level.

to the ways of her ancestors. She was a half-caste, not esteemed highly by her fellow Tahitians, but naturally, as once a Queen, made much of by the courtly French and foreigners. Never a Pomare, save by a transient marriage, she chose to lie here. She wanted no last resting place either in the towering mausoleum of Pomare V in Papoa, nor in the graveyard of the rest of the Pomare in Arué. She was first and foremost a Tevan of Papara. She or hers — I know not which, for it is not common knowledge — would emphasize the fact through all the years to come. She lies beneath a marae, fashioned in a six foot miniature of the great Mahaiatea marae, which was raised in the Long Ago by Amo and Pura of Wallis and Cook's days to stand for the mightiness of that clan over all the rest. Such a memorial, striking though it is and, as a piece of stone masonry, perfect in its making, is the only instance known on Tahiti — and possibly through Polynesia — of a Pagan Altar raised in a Christian cemetery and used as a memorial of one who died, at least nominally, in the Protestant Faith. She died a Tevan, having lost by divorce the very name of Pomare, and with her passed the last link with Sovereignty of the Tahitian natives.

A low stone and cement wall, 24 feet by 12, surrounds the site of the pit in which over 200 men, women and children were consumed by fire during the epidemic panic of 1918.<sup>22</sup> There was neither time nor men to dig graves in that fearsome attack. Pitch was poured upon the corpses as they were cast into the pit. But when the worst was over and there were men at command, the dead were laid in rows, one upon another in another site close by, a walled square 24 feet by 24. A very few names appear on the walls of each, but many entire families were wiped out. These tell of sudden and of early deaths. Not far off, one meets Longevity.

There is no record of equal length in the entire valley than that of an Englishman named Adams,<sup>23</sup> born 1825, died 1915. Tahiti was his home from 1841. But another Englishman, by name Stringer, with his Irish wife, ran him close and lie hard by. Beneath their names and ages, with dates of birth given as 1825 and 1828, one reads, "Residents on Tahiti since 1849." They died in 1910. Adams and they saw much change occur during those many years: the French Protectorate, Queen Pomare's Jubilee, Sovereignty surrendered for her unworthy son's needs, Papeete a village on the seashore grown to a Town and Capital.

Now Tragedy. On a headstone nigh the Gateway is the name P. A. Tierney, an Anzac. His end was violent. Gassed and ill, he thought to recover amid these sun-kissed isles. On Raiatea, he unwisely

<sup>23</sup> Thomas Stratford Adams (1825–1915). According to [Tahitiens. Répertoire biographique de la Polynésie française](#) : Négociant et colon. Né à Londres le 14 décembre 1825. Son fils Edwin déclarant le décès de son père, le déclare de « mère inconnu ». En fait sa mère semble avoir été une Française, protestante de la région de Bordeaux. Une tradition familiale veut qu'il soit « arrivé jeune à Tahiti après avoir embarqué sur le bateau ayant ramené en France les cendres de Napoléon ». Serait arrivé à Tahiti dès 1841. C'est aux États-Unis qu'il aurait épousé Emilia Bambridge (1835–1905). Sa Femme aurait eu alors quatorze ans, ce qui mettrait le mariage en 1849, date acceptable, puisque leur premier enfant, Elisabeth, est née à Sydney en 1851, mais qui ne semble guère conciliable avec les soixante-six ans que lui donne son acte de décès en 1905. Thomas Statford Adams est porté, successivement comme « restaurateur » (1855–1857), comme « négociant » (1858–186) et comme « planteur, demeurant à Taunua » (1869) dans les actes de naissance de ses enfants. Il fonde une usine de canne à sucre, située à Fariipiti. Ruiné par un nommé Forster auquel il avait confié de l'argent pour l'achat de nouvelles machines, il vend son usine à un certain Kennedy, qui la repassera lui-même peu après à Norman Brander. Sons fils Charly travaillera sa vie durant pour N. Brander à Fariipiti, puis à Atimaono-Papara lorsque l'usine émigra dans ce district. Adams, « habitant notable », est nommé membre titulaire du conseil d'administration le 19 juin 1869. Il meurt à quatre-vingt-onze ans, à Papeete, le 23 juin 1915, d'un refroidissement pris dans la vallée de la Papenoo où il s'était réfugié lors du bombardement allemand de 1914. Il aurait tenu avec exactitude son journal toute sa vie, mais fort économe, il se contentait de noter chaque soir, sur une feuille volante, les événements du jour. De son vivante le « journal » était dispersé aux quatre coins de la maison. A sa mort, ses filles, peut-être intentionnellement, négligèrent de réunir ces feuillets qui disparurent, et avec eux, un document qui aurait pu être d'une grand valeur pour l'histoire du Tahiti de la première période coloniale...

went the way of the thoughtless multitude and taking his young mate with him, landed on the neighbouring island of Bora Bora. There, with three other men, the five made merry. The next morn, Tierney's body, tied up, with marks of violence on it, floated in the bay. Natives placed the body in a packing case and buried it. The crime has never been unravelled. New Zealand was not content. His fellow Anzacs, after endless difficulties of red tape, raised the body and bore it to Pauranie. An Anzac Captain, whom I have called Friend for years, was the man who never let up till he brought the body of his one time Private to God's Acre, here to lie among other Anzacs who died of wounds on their long journey Home from France.<sup>24</sup>

Hard by the upper pit lies Trower,<sup>25</sup> an English public school boy of engaging personality and ceaseless activity, who, after thirty years' residence, found himself up against a stone wall, loss of wife, the fault all his, loss of island property through both French and natives determined opposition to him, an outsider and a foreigner, gaining any rights to property he had provisionally secured on the neighbouring small island of Maiao and forcing its relinquishment, without means of any kind and many a local debt, too proud to turn to us, his friends, for a timely and a helping hand, a revolver solved the matter. We laid the body there, wrapped in a winding sheet in his clothing, just as he fell. He had been an aviator in the Great War, coming through unscathed, only to fall at last by his own hand.

Nigh Keable lies Gardiner, a San Franciscan. His end also was violent. He was but in his twenties. I knew him well, had been a fellow traveller with him as our steamer roamed through the Tuamotus. Before we met, he had visited the Marquesas, and Melville's "Typee" having ever fascinated him, he was bound to traverse that valley in Nuku-Hiva. Both natives and white folk had long fled the place as a habitation because of a midget fly, introduced by means unknown to this day, whose bite was poisonous. Gardiner took his chance and penetrated the valley to its head on horseback. He paid the price. I saw his wounds. The poison worked into his very brain. Hallucination possessed him. I did my utmost to keep his spirits up. In Papeete, I watched him, visited him oft, strolled in the lovely

<sup>24</sup> According to New Zealand Foreign Affairs and Trade, *Three soldiers from World War One – two New Zealanders and one Australian – are buried in the [Pauranie] cemetery. An Australian soldier, R. W Fuhrstrom, and a New Zealand soldier, Roy J. Leslie, both died of war wounds on the passage back from Europe, passing through Tahiti. The New Zealander P.A Tierney, believed to have fought at Gallipoli, died in French Polynesia a few years after the war.* Tierney's headstone is shown below.

<sup>25</sup> Eric Lawford Trower (b. 1883). An account of the *Trower Affair* on Maiao can be found [here](#).

avenues with him. One Thursday night we parted; on Friday he committed suicide in an avenue nigh the heart of the Town; on Saturday we laid the body of my young friend in Pauranie. <sup>26</sup>

Enough. Ere I leave Pauranie, its ordered beauty, its quiet and the tales it tells, I never fail to end my roaming by standing for a space before a Stone which softens all the crudities and man's madnesses to be met with there — the price of War, the price of Pestilence, of Insanity, of Greed and desperate Want, of Wine and Lust.

She was a young bride of twenty summers. Life was short for her, but it must have been very beautiful, as all who knew her warmly certify. For me, her Epitaph throws a veil over all and every grave. She saw the Best in all, both men and things, for thus we read o'er where she sleeps, "Blest are the pure in heart, for they shall see God." That daily vision left no room with her for cavil or contempt towards her fellows, be they who they may, nor have they rightful place with us in this Valley of the Dead.

<sup>26</sup> WWB's trip with Wesley S. Gardiner (1903–1928) in the Tuamotus is described in *The Tuamotu Islands* in Part XIII, *Roamings In the Great South Sea*. See also Tale #92, *Of the Marquesas*, in Part IV, *Tales of a Roaming Grandfather*. Gardiner's headstone is shown below; the text is "Wesley S. Gardiner – Native of San Francisco – 1903–1928".

## REVENGE

He took it into his own hands, not waiting for the slower course of Law.

I knew him well; at least, I thought I did, a little well-knit Frenchman in his late thirties, a bundle of energy, ever at the service of others, going through life cramped in means, but with ever a Song in the Heart, which he gave vent to in his interminable chatter. Highly intelligent, way above the ranks he sprang from, his parents still alive, glove makers from France working in New York, who had brought him thither when but a dozen years of age, putting him to school, giving him thereby a perfect command of English, without any trace of accent. Thus with his native tongue and a readily acquired fluency of Tahitian, he was an excellent and, to me, a useful linguist.

There was an ingrained love of order in him, clean in his habits, an abhorrent of liquor and an abstainer alike from tobacco. An avid reader, he was *au courant* with world affairs, keen to learn more thereof and discuss intelligently, never assertive, a courteous little fellow despite oft times berating at his tasks from hasty men and women, honest as the day nor ever showed sign of roughness in the rough and tumble of his daily life amid his fellows. Never did he resent any counsel from me, nor my frequent word of warning that too much Talk and thoughtless Joking oft led to trouble. His devotion to me and my needs was indeed remarkable.

He had for years thus won my admiration for Character, indomitable Energy and high Intelligence. He worked for me as a house-boy, cleanliness and thoroughness itself, and as gardener, where strength and perseverance are demanded in an island blest with perpetual summer and where weeds grow overnight.

In a far different field he also served me, research work in the long distant Past of Tahiti. He did not know defeat; difficulties only added zest to him; there was no let up till he had found the Quest I set him. I was, as time went on, in heavy debt to him, but with him it was pure joy of service, to serve himself came last.

He had his foibles; they were my constant amusement. His appetite was amazing. What he could store away in that little body of his was extraordinary. He was no epicure; the plainest of food sufficed; the stalest of bread disappeared; fragments of foods ready to be cast aside by me as worthless, all went into his maw. His digestive powers surely equalled those of an ostrich. Tea by the pint washed all down. He lingered long over his meals, not a glutton, but a newspaper or a book absorbed him as from plate after plate he fed the stove within. With him it was a duty to feed his Mind even as he was feeding the inner man.

And he was a Junk man of the first rank. He collected assiduously. He could see no waste. Tins, bones, bottles, discarded shoes far too big for his use, fragments of clothing, all went into his Vanity Bag, the sack which seemed to be a very part of himself. The hut in which he stored his gatherings was an amazing sight, a Junk shop to be seen to be believed. The value of what was stored therein and ceaselessly replenished was Nil, but to him was precious, quite impossible to part with. Fit only for the Garbage cart, to him it counted as Treasure Trove.

It is strange but true; he might still be free — his hideous crime screened by him so amazingly as it was — but for those two weaknesses of his, his love of Jestful Talk and his craze for Junk.

To those who did not know him save from his appearance on the streets of Papeete, he was looked upon as himself a Joke. He had his best clothes for great occasions, but, in general, he wore scant

attire. Shorts, and very short at that, were his only covering, rain or shine, neither shoes nor vest nor hat. On his beloved old bicycle he ever sped along, his Vanity Bag conspicuous. He had a courteous bow for every stranger passed upon his way, who doubtless wrote him down in their minds as crazy, and a breezy word for all whom he knew. He wanted, craved indeed, to be friends with all, aloofness and he were miles apart.

He was a Frenchman and his morals were of their standard. What his private life was, was none of my business, yet where all is carried out so unabashed and openly, it was impossible not to know in measure that side of his life. Like all the rest, he took to himself the daughters of the isle and by one he had two bairns, a boy and a girl. The mother full early left him for other, and seemingly no loss to him; his whole being was now wholly wrapped up in his love for these young lives. Oft did I see him promenading the waterfront on which I dwelt, his day's work done, carrying a babe in his arms. Then as their years increased, he had to make a home for them and he took to himself other mistresses to provide them with both shelter and care. He could not afford the higher grade of street-walkers; he had to be content with the lowest of the harlot gang. It was thus that overwhelming disaster came to him and his.

His bairns, as noted, were his All; to see them happy was his joy; to see them, as soon he did, uncared for, unkempt, unhappy was gall and wormwood to him. Harlots such as he had chosen for mothering his beloved ones are not given to tenderness. He came to me, his friend, with his complaint and his placid temper I saw at once was all aflame. She, one of the lowest of the low, whose record for foul speech and action was notorious, whose habitat had oft been the prison for theft and drunkenness, had done him wrong with his all precious flesh and blood. She had not only neglected them, but had dared to lay her hand upon them. He told me that he had hid his wrongs from me, his friend, lest I should be worried, but that he had appealed to the police for aid, who laughed at him for his pains and treated his complaints as a Joke. He swore that something must be done and left me — and done it was.

Contemned, he took it into his own hands to pay the harlot back; he would be revenged for the wrongs she had done his loved ones, cost what it might. He would wait no more. It was October 12, 1935. He struck foully, mercilessly, savagely, a murder well nigh unheard of in its brutal violence. Enticing her, unseen by the company, from a drunken gathering along the waterfront where she and the rest were holding high revelry far into the night, he led her a few hundred yards away to where foliage hid from view, shot her through the head, then, not content, drew his long cutting knife carried in his belt and beheaded his victim. His revenge not yet satisfied, he scraped out a hole and buried the bloody head, trampling it down in a very frenzy of revenge, hatred and contempt.

A few hours later, ere the corpse was cold, a boy stumbled across the fateful deed. Hot hue and cry was raised. One after another suspect were haled to court, who were able to prove their innocence. Though things pointed strongly to him, he proved also an alibi. And not content, he, with astonishing nerve, was one of a handful who stood beside the open grave in Pauranie — Papeete's God's Acre — as the dismembered body was laid away. Was she not his mistress? said he. There was seemingly no solution nor any lead till he himself gave it through his fatal gift of interminable jesting talk. But not at once.

For nigh twelve months, he carried the dread secret with iron nerve. None who employed him saw the slightest change in him. Always the same, every old trait there, ready as ever to serve, never a sign of restlessness. Though public suspicion hung to him, it would not die; we who had known him so well declared that the murderer could not possibly be he. Was not his manner an open book to us? So little does one know of another's Mind. But disillusion had to be our lot and it came first from an unexpected source.

He had once told me that he had but one known enemy. I asked the reason why. He said that the man, a half-caste with whom he occasionally he had ‘passed the day’ had been later on enrolled as a Mutoi (policeman) and naturally had appeared on the streets in proper uniform. Passing the man in his fine new toggery, he had in a joking spirit called out how fine he looked in his new feathers, how well they set off his fine face and figure. He meant it well, but it had been taken as an insult, never forgiven, never forgotten, and from the very first had caused him trouble. More than once that Mutoi had trumped up charges against him, but his Chief had always turned them down. With a smile, the little will o’ th’ wisp would say to me that he could outwit that Mutoi any time of day. But, alike with himself, that Mutoi waited for Revenge. It came suddenly to his hand; he grasped it and following hard up on a simple innocuous lead got his man.

For some months, a French firm dealing in cutlery had employed my faithful assistant, as far as time would allow him, as their travelling agent in the various island villages. To extol his wares, he would grow eloquent over the long ‘cutting knives’ he sought to sell, fit for any purpose, he would joking say, capable of beheading man or beast like the guillotine. This wild talk shocked the women, but they let it pass till it became talked of through its frequency. Yet he might have mastered the gossip of the countryside but for another talk which led him to his doom.

A streetwalker in the town refusing his advances, he, thinking it a harmless joke, threw at her that such treatment was the way harlots often brought real trouble upon themselves, body hurting and head hurting by men. To rid her of him, she fled to the police hard by, to her paramour, in fact, who was on his beat nearby, that Mutoi of all the force who was waiting for his chance. He lost no time; he bore him off to jail. The next morning in the Court, the woman made oath that she had heard from her annoyer’s lips “when drunk” that he had slain her friend. But “when drunk” was too clearly a lie to stand, for all knew his open hatred of liquor. He was once more free, but that talk of long cutting knives would not die; it found its way into the town and became the gossip of the marketplace. Something had to be done.

He was working in the garden of my fellow countryman on the waterfront one July day, 1936, when the final call came. His nerve held fast. When questioned, he again denied all connection with the crime of the now long Past, but the police Chief had a different conviction and jail was to be his residence till all was for good and all cleared up. The days, the weeks, the months passed, as now they tried their tricks on him, as seemingly is their way with suspects. They said they had found the Knife! He smiled. They said that they had a full confession from his confederate! Pure nonsense. He was in the toils, but he would yet save himself. Then Junk stepped in and sealed his fate.

Searching for any, the slightest clue, that Mutoi found it damningly. The slain harlot had had a single dress upon as she went to her death. Her slayer could not leave that behind to go to waste in her grave. He disrobed the bloody trunk and bore her robe off to his Junk store, where it lay washed and hidden. That Mutoi, in his tireless hunt amid the piles of junk, unearthed a woman’s dress, traced its maker among all the Chinese women seamstresses and who she had made it for, found, too, that the victim had worn it at the drinking party.

What now? said they, as they brought him into Court as held up the dress — what now?

Then boldly, without a tremor, seeing all hope of escape vanish, he confessed, as he stood manacled, that he had slain the harlot, giving the very details as noted, and thus had had Revenge denied him otherwise.

Silence would have been golden then, but he could not control his tongue, so bringing fresh trouble upon himself. With cool indifference, he threw out to the Court the remark that if the guillotine was

not quickly to close his lips, he might tell more. What he actually meant will never be known, but the police suspected the worst. Was it possible that he was the human monster, a Killer, and had other murders to his record? There had been in late years mysterious disappearances of white men. They were lonely men, seen one day and disappeared without a trace the next. They were written off as Suicides, with sharks their end.

So heavier clamp was put upon him, solitary confinement and utter loneliness for him to whom Talk was Life, nor books, nor papers allowed to break the deadly and nerve-wracking monotony. 'Silence' was writ large above his cell door. Would he crack? Would his nerve be broken? Would he own up to other crimes? The Law waited and so waited we who had so blandly thought we knew him.

The months dragged on and the constant Court questioning of the now confessed slayer took a fresh line, if by so doing some other besides he might possibly be laid by the heels. As the Principal, he would stand in one category; as accessory, in quite another. Was he paid, as Rumour now persisted in, to get rid of the harlot as one who knew too much for another's comfort and safety. Justice would be fair and so again it waited. But he denied all confederates; it was his Revenge and his alone.

A full year had now passed since he was jailed and still there was no trial. By now the ground was cleared of all suspicion. The difficulty was concerning the Court. That Court — the Criminal — is rarely held in Papeete and there seemingly is much to be done and arranged when it is convened; a special Judge, of some special standing, has to be secured — and oft from far — who together with specially selected Assessors of high standing act as Jury.

Two full years since the harlot was slain, the Court convened. It was November 25, 1937. All was set and I, for one, was far from wishing to see the man tried for his life. But it was not to be. A Summons required my presence. Not in the Court Room, crowded to the doors and overflowing, but happily gathered with a handful in a room adjoining. My name was called. A witness stands below the steps leading up to a platform on which, before a long table, sits the robed and capped Judge, with two Assessors on either side of him. Below them and behind the witness sat the prisoner that memorable day for him and me, his friend, a small lone figure unmanacled, with soldiers, their bayonets fixed and gleaming, standing at attention on each side of him, police within hand reach. The Interpreter — if needed — sat at a desk close to me.

Methought me at once of the day when once before in Papeete, but in far less crowded company, I had been privileged to speak for a friend.<sup>27</sup> Courteously asked, as there, to address the Court, it required no effort to bear witness, so that not alone the Court, but all should here to the man's faithful, tireless and efficient toil for me for full six years. For that I should forever remain deeply in his debt, despite his hideous crime. That done, I left both Court and hearing; it is for gruesome folk to have their feast if so they wish.

We gathered at 8 a.m.; the End came at 11 p.m., when, after a short recess for deliberation, the Court announced that for his crime, the prisoner being considered of Unsound and Unstable Mind, was sentenced to "Hard labour for Life in his homeland, France." The Court rose; the crowd departed; the condemned was returned to his cell. So passed he from our view.<sup>28</sup>

<sup>27</sup> See *My Friend*, above.

<sup>28</sup> WWB refers to this story in his letter to his granddaughter of 15 September 1941; see Part V, *Letters*.

## SUNDAY IN PAPEETE

The Day, of rest from toil, starts early in Papeete. No lying abed for these people. I know — for living on its waterfront, the earliest activities pass my door or at the back of it upon the Island Highway.

From 3 a.m. the market carts of the Chinamen from the countryside jog along as if their sorry looking steeds were half asleep, as are the drivers, few without a companion or two who somehow find room in vehicles crowded to the limit with vegetables, fruits and even livestock for the market.

By law, every vehicle down to bicycles must bear a light after sundown. These carters carry a kerosene lantern, usually fastened by the side of the driver, but often dangling under the cart. A long prolonged and disjointed procession thus passes me as I doze on my verandah couch, all headed for where their fellow countrymen await to unload and place for sale on their hired stalls, along with their own local produce.

The Day for the folk in general starts with two early happenings. Early Mass for the Catholics and Early Market for one and all. By 5 a.m. the streets are alive with movement afoot or on bikes, and the Cathedral bells clang out for the Faithful to assemble before the business and the merrymaking take hold.

At 5:30 a.m. the large brass bell of the market sounds out that the gates are open, and an eagerly waiting crowd pour in. Quickly there is scarce space to move about, every stall is stormed by a hustling, bustling, laughing crowd, eager to select and purchase, but just as eager to chatter with their fellow searchers for home necessities to be made ready for the table, for this is the great Feast day of the week.

The Marketplace is no rough and ready affair. It is a building with concrete flooring, with steel supports and girders to carry its lofty zinc roofing. It has two long, broad wings — one for the sale of fish and meat, one for vegetables and fruit, each vendor with his stall — and between these large wings, a fairly wide corridor, lined on each side with shelves for other produce and pens for imprisoned ducks and chickens, an ordered and practically open air spot, ever kept spotlessly clean with abundant water and the broom.

The fish stalls are the first and great attraction, for it is fish first and foremost with Tahitians. There is a real scramble to get within reach of the salesmen before all is snapped up. Here, hanging from iron bars, are strings of fish for sale *en bloc*, shrimps strung on slender sticks, shellfish already shelled and strung, the crayfish on hand, whilst on the slabs of the stalls lay the tuna, the bonito and other large ones whose names are quite beyond me to pen, ready for the slicing knife at so many francs the kilo. And with fish, there must be sauce and here it is to hand, the shredded nut and milk of the coconut mixed with raw shellfish, sold in lengths of green bamboo.

The meat department has as lively a time, the vendors enclosed in a pen to hold off the buyers, knives and choppers busy to serve the impatient crowd. Those pens in the corridor are cleared as if by magic and many a toothsome sucking pig is born off squealing and protesting.

Across the way, those vegetables and fruit disappear in a trice into baskets already full, and latecomers have to be content with the leavings.

And Tahitians, both men and women, love flowers at all times and specially those with which to adorn themselves. The flower stalls are run by women who know the tastes of their fellows, and the Tiare Tahiti, with its exquisite scent, is the Queen of all. The women encircle their dense mop of

raven black hair with its garlands; the men, their hats. The girls place a single bloom behind one ear. There is laughter and joy and chatter everywhere.

But police are there in case, for tempers are sometimes short and order must not run to riot. One of them moves from stall to stall with pencil and notebook to gather in the charge made for its use this morn, for there is no such thing as Credit granted in the Marketplace; it is all Cash down for one and all.

It is nigh closing time now and the Tanés (men) and the Vahinés (women) begin to leave, many direct for their homes and kitchens and native ovens, with their load of 'Good Eats', many for the nearby Chinese restaurants for morning coffee. At 7:30 a.m. the gates are closed, the cleaners up appear and by 9 a.m., did you step round, you would find the Marketplace spotless as ever, awaiting for its use the breaking of another day.

I am back from the market, with my modest needs supplied, and from my coin of vantage as I read and write, how the many hours of the Day remaining are spent by Tahitian folk is clearly evident.

The sun is getting strong and the gentle sea breeze appeals. Along the waterfront are cement seats with room for four, spaced evenly, and at the back of them, a charming little park with much shade and real garden seats of wood dotted here and there. The seats are filled with men and women of all ages, even to the agèd, for I often see Ancient Mariners there, gazing wistfully, perhaps mournfully, out across the lagoon to the open sea on which once they roamed, whilst many laughing groups lie about on the grass around. There is no drinking to be seen. Those who seek liquor with their free hours are finding it in the wine shops in the town.

Now the bell of the native Church close adjoining my habitation rings out, and past me comes the congregation — here is a long procession of children, two and two, then come men and women, singly or in groups, all neatly clad and mostly shoed, and following slowly come old men and their vahines, moving gravely, the old men in black coats, white trousers and hats, the old women, true to the tradition of their forebears, in long black Mother Hubbards and hats of the same hue, all alike barefoot.

The service is over before noon, the congregation files past again, and from then on, till nigh 5 p.m., all is so quiet that one would think that Papeete was asleep. And so in large measure it is, for the feasting has taken place, the marketer's choices been served up and a siesta is in order, the Day of Rest is at last acting up to its name.

Now once again the waterfront is awake; there are white clad couples on those seats, soldiers from the Barracks appear alongside gay, laughing, flower-bedecked high-heeled girls, all heading for the Dancing Halls, which have re-opened along with the wine shops and will not close till the hour before midnight. There, there is fun and frolic, rest again unthought of, but all elsewhere are be thinking — like the Minah birds around me — of repose. The sun sets gloriously over the mountain peaks of Moorea, the Town lights break out, occasionally there is the rumble of a cart returning whence it came, an automobile speeds by, my book and pen are laid aside, and my own Day of Rest is over.

## THE GRAND TOUR <sup>29</sup>

Instead of describing for newcomers and those interested in the island, a full hundred miles circuit of Greater Tahiti of one's own, far better let us go with the very first tourist who, afoot and by canoe, made the tour, happily leaving for us today a lively description of his experiences and of the shoreline, then densely inhabited of an island which may well claim to be the Garden and Bower of all islands lying in the Great South Sea. We must go far back in time.

In 1775, the Spanish marine, Maximo Rodriguez, who had been left with the two mission priests as their interpreter — for he had rapidly acquired the language during a voyage back and forth to Peru, with four venturesome natives who made the trip — and who was far keener than his superiors to learn of both island and people, got leave of absence and started off. He must have possessed a most winsome personality for he won his way, even tumultuously, at every stopping place during a trip of sixteen days. <sup>30</sup>

From Tautira on Lesser Tahiti, he headed northward along the east coast, taking natives with him to act as paddlers when canoeing was necessary, the land too rough and densely timbered for footwork. It was July, the island's so-called Winter Season and keeping to the quiet waters within the Barrier reef, he made landing first at Pueu to find natives joyously felling trees with the axes of the white man, lately their new and proud possession. Keeping to his canoe, he reached Hitiaa before nightfall. It was here that his ship, the *Aguila*, had grounded in 1772, and the French navigator De Bougainville had lost six anchors in 1767. With daylight, Riti, the Chief of that District, took him in and around the tricky, submerged reefed harbour and introduced him to a dense population, who, far too much for his comfort, closed in on him in their excitement at his visit.

Footing it to the next village, Mahaena, the canoe following, he received as warm a reception, and tramping up the valley at the foot of which it lies, he noted the soil so good that he presented the delightful Chief with a handsome package of likely vegetable seeds.

The next morning, rough country forced him to take to his canoe to reach Tiarei, to be treated there right royally, native cloth and a baked hog being formally presented to him as if their doing homage to a Chief.

Sunrise found him footing it to Onohea and here, blocked again by very broken country ahead — where today the Island Highway has blasted out its course — he took again to his canoe and made landing at Papenoo. Here he saw the Papenoo river, the longest and broadest of all Tahiti's countless streams, and spent a day touring the wide valley, crowded with native homes and many a marae even to nigh the summits of the mountainsides.

---

<sup>29</sup> See also *The Spanish Marine's Story* in Part IX, *Old Time Tahiti*, which includes, in footnotes, comparisons of WWB's text to his source, [\*The Quest and Occupation of Tahiti\* by Bolton Glanvill Corney \(The Hakluyt Society, 1918\)](#).

<sup>30</sup> On page xvii of *The Quest and Occupation of Tahiti*, B.G. Corney quotes David Samwell, surgeon of the HMS Discovery, at Tahiti in August 1776: "They [the Spanish ships] left three Spaniards behind them on the island... One of them was a common person, whom the Indians called Marteemo; he was very much liked by them & had, during his abode here, rendered himself by far the most noted of any of the Spaniards... Marteemo made the tour of the Island & lived upon a very friendly footing with the Natives, conforming himself to their customs & manners, & indulging himself with those pleasures which the Islands afforded, more particularly among the Girls, which last Circumstance was so agreeable to the Genius of these People that they looked upon him on this account to be the best Fellow among his Countrymen, who preserved a haughty Distance in their Behaviour to the Indians."

Daylight saw him again on the move; he reached the north coast by canoe and landing at Matavai (Point Venus), he was fairly mobbed. So overwhelmed was he that he had his canoe men hasten off a couple of miles to Paré (present-day Arué) to beg the 1<sup>st</sup> Pomare — the Paramount Chief of the District and whom he had met in Tautira — to come to his relief. The huge crowd recalled to mind his experience the previous year whilst making the circuit of Lesser Tahiti, when on arriving at Vairao, the throng that gathered round him so pressed “that I had nigh been smothered,” and just to see how many there were at an instant’s call in that tiny corner of Tahiti, he asked the crowd to arrange themselves on a space of open ground, which they did at once, and “I made them out to number more than two thousand souls.”

It may be noted here that by a census in 1848, a little over a century later, the number of natives on the whole of Tahiti is given as only 8,082, whilst Cook’s rough estimate in our tourist’s day was 120,000 and over.

Relieved of too great pressure, he spent the next day roaming around a spot and a harbour which Englishmen had made known to him before his countrymen had reached the island. Then on to Paré, where he rested a couple of days, enjoying especially the company of the agèd Ha’apai, the father of Pomare, who poured out to him the records of the island’s Past.

Now leaving the north coast, he footed it for Faaa on the west coast, but was held up at Faré Ute by heavy rain. At day break, he proceeded afoot, no need for canoe which followed in the quiet water of the lagoon, passing along the shoreline and the waterfront where today Papeete stands, a name and site then wholly unknown to Tahitians.

He had a companion, for one of Pomare’s brothers was with him till a Bowl of great value — a promised present to His Majesty of Spain — lying at Punaauia should be handed over to him. Even thus he had his doubts as to securing it.<sup>31</sup>

Faaa’s Chief Tepahu entertained them, whose wife owned by report three especially fine pearls. The winsome marine tried his best to secure them, but the lady was adamant. They reached the village where lay the Bowl next day, but to escape the crowd, he had to take refuge in his canoe till sundown.

With daylight, the two made their way to the great marae Taputapuatea, where “from a small hut that stands in the said marae, they brought out the Bowl and delivered it to me, it being carried between four men who placed it onboard the canoe.”

He kept to his canoe and valuable gift as he made for Paea. The following morning, he went for a stroll, to find upon his return that the Bowl had disappeared. He got busy and learned that a leading native of Lesser Tahiti, who happened to be visiting Paea, had made off with it and had buried it in the sand of the beach, to carry it off from the Spaniards later on. He found the spot; his men got busy; the great Bowl was recovered and the tourist kept close and anxious watch over it till he reached home.

Its sequel is of interest. No bowl of wood, but cut out of stone, found only on the island of Maupiti, one hundred and more miles away. Here lay a dolerite quarry made by the natives, who from far and near were used to procure their adze blades and pestles for pounding food. It reached Spain and its Sovereign, then for untold years was lost. In 1912, it was found by an English doctor,<sup>32</sup> a savant and

---

<sup>31</sup> Two photographs of the *Mystic Bowl of Marae Taputapuatea* can be seen in a footnote to *The Spanish Marine’s Story* in Part IX, *Old Time Tahiti*.

<sup>32</sup> [Bolton Glanvill Corney \(1851–1924\)](#)

keen student of Spain's Past, lying in the National Museum in Madrid, hidden away as Exhibit N° 2664, none knowing aught concerning it.

The circuit then led him on to Papara, the largest and most important District of all and densely populated. Here he spent two days with Amo and Parea, Chief and wife, both dominant characters of the day, who showed him the fine countryside and open spaces extending to the foothills. The village lay at the foot of the broadest valley of the island, surpassing Papenoo's in extent.

The fringing reef being too dangerous for his precious Bowl, he tramped to Papeari with all his belongings and rich store of gifts made to himself *en route*, the Bowl again carried by four of his men. Here stood the most sacred of all the island's maraes, spots of deep interest to him who missed nothing on his way.

He had now reached the isthmus and, having completed the circuit, not only the goods and the Bowl but the canoe itself was hauled and carried across to the east coast once more.

Here, news awaiting him that his devoted friend, the young Paramount Chief of Lesser Tahiti, was dangerously ill, he left canoe, gifts, his own belongings and the Bowl to follow him and hastened home afoot through dense and rugged country, reaching Tautira by nightfall.

He closes his diary with the laconic remark that he finds nothing worthy of note upon his arrival "except the Fathers' lack of interest in my journey."

## POINT VENUS

In 1767, when Wallis (H.M.S. *Dolphin*), first of white men to sight the island, struck the coast on its eastern side, he sailed slowly, seeking anchorage, till at its northern end he found it in Matavai Bay. At safe distance from the ship, the shore of the Bay runs out to a low and narrow Point; at the further side of it, a stream runs out to the sea. It was at the Point that he and his crew made their daily landings during his stay of slightly over a month.

The following year, astronomers in the Homeland were keen over the approaching Transit of Venus and sought the world over for the choicest spot to observe it. By a fortunate coincidence, their lines all met on the newly discovered island of Tahiti. With the sanction of the Government, Cook (H.M.S. *Endeavour*) was sent out by the Royal Society to observe and report the Transit. In 1769, with Wallis' information, Cook dropped anchor in Matavai Bay and, on the Point, he raised a Fort to protect the Quadrant and other instruments he needed from any possible injury by the natives. He named the Fort and Point after the Star. After a stay of ninety days, he sailed away, leaving nothing behind save the plaque imbedded in the soil on which the main instrument had stood. The plaque was a coral slab a foot square, with a brass plate let in, marked with a meridian line.

In 1788, Bligh (H.M. armed vessel *Bounty*) appeared on the scene seeking breadfruit saplings for plantations in the British West Indies. He made warm friends with the 1<sup>st</sup> Pomare, the then savage Chieftain of the District. Pomare was having plenty of trouble from the rest of the island clans and begged Bligh to carry him off to England. Bligh excused himself on the ground that he must needs have the consent of his Sovereign before doing so, but would return and let Pomare know. He sailed to meet his nemesis in the Mutiny. Confident that his sailor friend would return, Pomare raised on the Point an immense native house covering the entire site of the Fort, where in the floor of earth still lay Cook's plaque.

In 1797, English missionaries appeared on the scene and twenty-five were landed on the Point, seventeen men, five women and three children, taking up their residence in the Bligh House, which still stood intact and was freely offered to them, in place of Bligh, by the first of the Pomares, still in power. They made it habitable by running up partitions forming bedrooms, dining and sitting rooms. It was not long, however, before they built a more convenient dwelling, with an upper storey, and in the British House all dwelt save a couple of the bachelors. The new home was but two hundred yards distant and on the same side of the stream. It is easy of location, though both houses have long since disappeared.

A century now passed and troublous times were at long last over, but the memory of Cook remained and glowed still warm in the hearts of both white folk and natives on the island. It was felt that there should be some permanent memorial and that it should be raised at the Point he had made famous by his coming. It stands there today, not towering, but a squared shaft of stone and cement with a globe atop, and at the base of one of its sides, Cook's brass plate is let in. But the memorial was not raised on the site of the Fort, but exactly opposite on the other side of the stream, and the plaque was taken up from where it had lain so long and carried across the stream to find a new resting place in solid concrete.

Hard by stands a Lighthouse raised by the French in 1867, so with its memories and its structures, Point Venus becomes a Mecca to all those who know and to all who would learn of the island of Tahiti.<sup>33</sup>

---

<sup>33</sup> See *The Cook Memorial at Point Venus* in Part IX, *Old Time Tahiti*. Footnotes contain drawings of the fort and its location; a photograph of the Cook memorial, with the lighthouse in the background; and a photograph, taken in about 1978, of the plaque at the base of the memorial, which was placed by the Royal Society and the Royal Geographic Society in 1902. The Royal Geographic Society plaque has since been stolen. See also *Point Venus* and *The Lighthouse at Point Venus* in Part IX, *Old Time Tahiti*.

## THE GREAT MARAE

The temples of Tahitian gods were open air affairs. A marae was an enclosure in parallelogram form, stone walled, with a stone platform at one end, sometimes low, sometimes raised high, used for religious rites.

Every Chief must needs have his own marae, apart from the Corporate ones, such as those of the doctors, the canoe builders and the fishermen. All these were large in area; lesser folk had to be content with less room and less fine workmanship. He who had neither his own marae nor right of entry to other was socially an outcast.

Maraes studded the islands and the priesthood had a busy and profitable time year in, year out. All was carefully regulated; the Upper class had right to raise their maraes on the promontories of the shoreline; the Middle class had right to the heads of the deeper bays; the Lower class were told off to the interior valleys or the mountainside. The altars of the first named stood high upon the stone pavement; those of the others were all of lesser grade and workmanship. Within each area, upright stone slabs were sunk in the ground against which those attending for worship reclined as they sat on the ground.

Of all the countless number, two stood out pre-eminent and both of them in the Tevan District of Papeari. They had stood there for untold generations — Farepu'a marae, said to have been raised by the god Ta'aroa, and the marae O'Tahiti, raised at a later age by a mighty descendant Tetu-nae.

None ventured or dared to compete with such great temples, till Amo and Pura of Papara District came upon the scene. He was the High Chief and Pura, his wife. A son was born to them, the name given him was Terii-rere, and reaching his 'teens, it was time to think of the boy's own marae. To the mother, more than to the father, here was the opportunity to show to the rest of the island clans that their boy ranked highest among all the budding chieftains of his day. She would raise a marae surpassing in size, in height and in grandeur of workmanship all other on the island, present or past. A forceful, dominating woman, she had her way.

All their people of every grade down to the slaves, captured in their constant wars with the rest of the clans, were set to work. The site chosen was Mahai-atea Point. The area was great, all walled in with coral and paved throughout with huge coral slabs cut out of the reefs. Its altar was nothing less than a pyramid; to reach its summit were eleven steps, each four feet high, its base 267 feet by 87, all of coral, perfect in its laying throughout.

At last the mighty task was completed; the marae To-o-ari was ready for dedication. The Great Ones of all the neighbouring islands had been invited and were in attendance. A Feast was prepared for thousands; all Papara was there and priests without number to perform the necessary rites.

But that marae was never dedicated. The rest of the island clans had watched and waited; they would teach Pura and weak-willed Amo a lesson. An avenging host swept down and massacred all who failed to escape to the handy mountains. They failed, however, to lay hands on the prime movers of this exhibition of pride; Amo, Pura and their boy were among those who escaped and making their way across the maze of mountains, the trio reached Point Venus, there to meet Cook lately arrived. He and his scientific friend, Sir Joseph Banks,<sup>34</sup> soon after made journey to Papara and saw the great

---

<sup>34</sup> [Joseph Banks \(1743–1820\)](#)

marae. Their brief comment describes it as “a most enormous pile, its size and workmanship almost exceeding belief.”

Till 1865, it stood perfect, when leave was granted by the Governor to use its coral slabs and stones for a bridge needed nearby, and for the extensive buildings of the Atimaono Coffee and Cotton Plantation, despite the pleadings and protests of the natives and many white folk. Today only a great heap of shapeless coral remains. It is all overrun with trailing vines and even trees have taken root in the pyramid, but ruin though it is, the Great Marae still speaks of a Past worth knowing and appeals for regret at its tragic end.<sup>35</sup>

---

<sup>35</sup> See also Chapters III and IV of Part IX, *Old Time Tahiti*; the former shows an engraving of the pyramid from 1799.

## TAIARAPU

Tahiti is, of a truth, not one but two islands, joined by a fairly broad isthmus, the one Greater Tahiti, the other Lesser Tahiti, its native name, Taiarapu. The latter is not without interest to those who would learn of Tahiti, as also to white folk, residents or visitors.

In 1493, the sovereignty of all the islands in the newly known Pacific Ocean was granted by the Papacy (Alexander VI <sup>36</sup>) to the Sovereignty of Spain. <sup>37</sup> Portugal had a western slice. By the British, this was considered a very large assumption and they sought to know for themselves of the islands and what they might hold in the way of trade. Possession was a secondary matter; there was no thought of quarrel or war over the point. Time would see to that.

Tahiti was somewhat of an enigma to both Monarch <sup>38</sup> and Viceroy. <sup>39</sup> They knew of its existence, but just where it lay was unknown, save the general direction to its shores. In 1772, the Spanish Captain Boenechea, <sup>40</sup> in H.M.S. *Aguila*, set out and by good fortune, after touching at a few other islands that he fell in with, reached its southern end, Taiarapu, and dropped anchor at Tautira. He returned to report; Carolus ordered missionary work; and the Captain was back before two years were up. Forthwith on landing, he raised a giant wooden Cross and inscribed upon it:

*Christus vincit.*

*Carolus III Imperator 1774.*

Wallis had been on the island in 1767 and Cook had dropped in more than once. He happened to have just left when Boenechea called the second time, but in 1777 he once again dropped anchor, not at Matavai Bay as usual, but at Tautira. Seeing the lofty Cross, now three years standing, he did not cut it down as many a ruthless man might have done in foolish contempt, but ordered the following to be inscribed on the reverse side of the notice:

*Georgius Tertius Rex.*

*Annis 1767*

*1769, 1773–1774 et 1777.*

When the Spanish monarch heard of this daring action against Spain's sovereignty, he sent orders to his Viceroy to have it effaced forthwith, but this was never done. Spain and its outside possessions were too much occupied with other troubles; Spain's sun had set; Tahiti was left to itself and Time took the Cross in hand. It rotted, fell, and left to us of today to seek and dispute, in friendly fashion, the exact spot where once it stood.

Boenechea landed the mission priests he had conveyed and, granted land in Tautira by Vehiatua, the Paramount Chief of Taiarapu, raised a Mission House — evidently on the site where today the Catholic Church stands. Those two priests were a very distinct failure and begged to be conveyed

<sup>40</sup> [Domingo de Bonechea Andonaegui \(1713–1775\)](#)

back to Peru — a rare and lone example amid the host of their fellows who, the world over, lived and oft died heroically at their task.

But it was not Boenechea who carried them back, for in the same year he had arrived a second time, 1774, he died aboard his ship and was laid in a grave close adjoining the Mission House, along with one of his crew who, a few days previously, had been killed whilst felling a tree for the home of the priests, they the first white men to die upon the island. Where they were laid is purest guesswork today.

And to those who hold Robert Louis Stevenson <sup>41</sup> in high esteem, it was at Tautira in the 19<sup>th</sup> century that he made residence for a goodly time ere he set out for Samoa to end his days. His dwelling place is a Mecca to many and it is to be hoped that it will not be allowed to go to ruin and oblivion, for it is but of native work, not of brick and mortar.

## LA MAISON DE SANTÉ

Adjoining my onetime residence on the waterfront of Papeete is a charming bungalow; during my stay, at first a private residence, but then alas! over its front gate appeared the above imposing sign. This Private Hospital had a hoodoo upon it from the very first. It was organized by a Surgeon who had arrived from France some eighteen months before, and who was reputed to have a great reputation for his skill. The public of Tahiti are ever ready to run after any new fad or well-talked of name and he was soon fully occupied with clients.

In addition to his private practice, he had been given charge by the Governor of this Colony of the Leper Station a few miles along the Highway out of Papeete going east.<sup>42</sup> It was not long, however, before he was sized up as a more than ordinarily excitable Frenchman, but much was forgiven and overlooked when it became known that he had been badly wounded in the Great War. His insistence from the very first on “Cash down,” and no small sums at that, was so wholly different from the rest of Papeete’s doctors that folk began next to fight shy of turning to his aid. But he went straight ahead and now plunged into a hospital of his own.

That he felt himself as good as settled for life in Papeete was clear from the very large outlay made for his enterprise. More and still more additions were made to what was once but a family residence well suited for the Tropics, and its small compound became congested with buildings both large and small. Our one time quiet was disturbed indeed, but we were prepared to put up with much for the sake of suffering humanity.

All now made ready, the lone private hospital of the city prepared for action. The first intimation that all was not well was when a party operated upon for appendicitis, and given the annoying organ in a bottle of spirits as a memento, was shortly after seized with the same complaint and going to the regular hospital, was again operated upon to find the offending appendix still in its place. He had to disgorge the cash. A woman sentenced by him to be the victim of a virulent tumour fled in terror to the Government Chief Medical Officer, who assured her that in the due course of nature, she would hold yet another baby in her arms. She did so. Another, suffering from sunstroke, was on the point of expiring from hourly injections for a mysterious and deep-seated complaint, but was rescued in time from his erratic clutches, soon to walk among us, hale and hearty as ever.

Now sending his wife and children off to France — the latter for their education — startling developments quickly followed. He looked as if his heart had gone along with them, as he stood close to me in front of our homes, watching the Liner heading for the Pass. It was common knowledge that he eased his war wounds with drugs; now he steadily increased the dose. He became hallucinated with the notion that burglars haunted his compound by night and he would prowl around his verandah hour after hour, keeping his neighbours awake with his audible comments to his favorite enemies. This was endurable for was he not heart sore and a wounded veteran, but when he commenced firing his revolver into space in the dead of night, with homes of mere matchwood not thirty feet apart from his on either side, it was time to make protest to the Authorities. French law allows a revolver on one’s premises, but none outside without a special Permit, which he did not possess. He was on his own premises and therefore free to make holes through his neighbours if perchance one came home late and did not enter his own abode on the far side. It was also highly likely that one might be holed while a-bed. We gathered that the weapon had been handed over to the police, who guaranteed to keep watch and ward o’ nights. We were relieved. But he had other entertainments ready for us.

---

<sup>42</sup> A leper colony was once located at Orafara or Orofara, a valley on the northeast coast.

There came the crashing of crockery and furniture, together with the screams of his nurses, who, one after the other, fled the scene. Stepping outside my domain to see if I could render any aid, I beheld at that moment his outdoor man knocked clean off his pins and down the front door steps. He had but asked for his wages at the weekend. After a while and with the aid of the fortunately ever handy guardians of the peace, quiet was restored; the nurses returned; the man got his wage and we awaited, What next?

There came on the scene a little English doctor — like himself, as I should judge, in his early forties — and also like himself, a much wounded man, who had sailed with companions from England in a diminutive yacht. This man could not practice in French territory save as partner with a Frenchman. There was evidently some arrangement come to between them, for the Englishman, with his bride — an English nurse who had long awaited his arrival by a longer route than hers — took up his residence in the Maison de Santé and the Surgeon went off to the countryside. He had been for some months ousted from his duties to the Lepers; his ways were not the ways of the Governor.

Weeks passed and quiet had long reigned when one late evening, the surgeon arrived in his auto, entered and soon one could not fail to hear hot words — as far as one could translate such loud and furious outpouring — “No patients here,” “No cash,” “I’ll show you,” and then a roughhouse, some furniture evidently overturned and a crash. The Wild One had laid low his late-found friend. Screams from the bride brought everybody out on the run, the light still good for night seeing. A bandaged head was plainly to be seen moving in and out of the verandah. Yet when with morn the police arrived upon the neighbourhood’s request — not mine nor the injured one’s — the gallant little man was unbandaged and stoutly affirmed that really nothing had happened save an unfortunate accident.

But the Surgeon was doomed. A French Liner was due. The Governor, who has the power to Deport even without, if he so sees fit, giving any reason, notified our neighbour that a free passage was awaiting him, and if he chose to defy the order, he would be placed willy nilly on the next boat with his Passage at his own cost. He took the wiser step and Papeete saw him, with much relief, depart — his long lease, his buildings, his furnishings, his stock of drugs left ‘in the air’. Deportees in French Possessions are not handled with kid gloves; their persons being undesirable, their belongings must look after themselves. Those belongings had a sequel.

The little doctor was living aboard his yacht in harbour; the Maison de Santé was untenanted. It had lost its owner, but not wholly its usefulness, nor had one long to wait to prove it, tho’ clearly ’twas out of order. The place was empty when the Red Cross ambulance drew up at the gate, and a stretcher bore the inert body of a wealthy American woman in her thirties — I had seen her off — a would-be suicide thro’ Veronal.<sup>43</sup> A victim of drink, she sought to end it all. Back came the little doctor; around swarmed the ‘fast’ American set here, her boon companions since her arrival but a few months past. The poor creature was not to be allowed to have her way without fierce effort to frustrate her aim. But she won. For two days, there was a continuous coming and going by an excited throng of half clad women, then happily for her came the end without ever regaining consciousness. The next morning — they bury the dead quickly here, 24 hours the limit — there were priest and thurifer,<sup>44</sup> cross bearer and acolytes, the horse drawn hearse with its ghastly black plumes, flowers piled high, a line of autos. Slowly the long procession wended its way to the Cathedral and once again, we lapsed into most welcome quietude. We were grateful and would have been still more so if the Maison de

---

<sup>43</sup> [Barbital](#), marketed under the brand name Veronal, was the first commercially available barbiturate.

<sup>44</sup> A [thurible](#) is a metal censer suspended from chains, in which incense is burned during worship services. The altar server who carries the thurible is called the thurifer.

Santé had itself likewise departed to another sphere. But it was not to be. What next should hap was not long in coming.

The Englishman had sailed away to far off Java, when word came from France that the deported One had 'run amuck' in Paris and finding no way out of his difficulties, made an end to himself, unmindful of wife and bairns. We felt deeply for that woman, who had shown herself full worthy of respect. What would she do with the 'lease' and the 'belongings'? We were not left long in doubt.

The widow, leaving her brood behind her, returned, notifying none, accompanied by yet another Surgeon, who had purchased the Practice and Outfit as it stood — but no Cash down. He was announced as not only a surgeon, but a physician and what gave pleasure to many amongst us, long the subjects of derision, a well skilled Homeopath. Here then was a Man indeed and hopes ran high and the calls upon him waxed fast; the Maison de Santé was in full blast once more — but the widow got no Cash.

That he was no sloth and had nerves of steel was quickly evident, for he autoed fast, furiously, recklessly, as if he was ever rushing to save life by a moment or two. Despite warnings, summonses and fines, he steadily broke the speed limit, chickens and dogs his victims, whilst bicyclists and fellow autoists failed oft to escape. He certainly showed us what a slow lot we were.

He gave out that he had a delicate wife whom he had been forced to leave at Home — and shortly after his arrival took to himself a half-caste mistress, nothing very strange here even with a wife upon the ground. The French code of morals are not ours. Her like are known as Gold Diggers; contemning the rank and file, their quarry are the well-to-do or those supposed to be. He installed her in the country a few miles out of town, giving her the best of everything, a costly wardrobe, too, to the envy of her sisters, who were out of luck. But the widow still got no Cash, though the nurses were more fortunate. He was a skillful surgeon, without a doubt; this his brother surgeons freely allowed, but as a physician he proved to be but a weak reed and as a homeopath he was but an amateur. His bluff, however, was amazing; he was one of the most prominent men of Papeete, but Nemesis was on his track.

His wife, a small but energetic and entirely healthy woman, with her two boys — sturdy youngsters in their 'teens — came upon the scene. He had been apprised of their coming and had laid his plans accordingly. He brought his Scarlet Woman to a bungalow two doors past mine and at once from the Liner bore off his Family to the charm, the comforts and the loveliness of his country seat. For several weeks things went swimmingly and he was to be seen whirling his wife and bairns in and out of town. He was the devoted Father, yet he as diligently visited his harlot, always by the back way lest his wife might hap along.

But there are always those who delight in causing trouble. Somebody put her wise. Then things happened. Again it was my poor luck to see angry passions at their height. I was passing for my daily walk the boudoir of the mistress, when I heard a crashing and a screaming. The irate wife, too delicate to arrive with him, here showed her strength and mettle. She invaded the premises and proceeded to smash things up, mirrors and glassware, crockery and furniture all went humming. Though the husband rushed past me in upon the scene, there was no halting her; she would have battered not only the harlot, but himself, save that she felt she had done enough. Our sympathies were wholly with her, but for myself, I thought I would put another house between him and me, so moved next door, then vacant. The harlot also moved, going off for awhile to another isle, but, soon returning, was installed in an abode at the edge of town. The wife also moved, installing herself in the home once mine — alongside the Maison — to keep watch and ward over her wild mate. Quiet once more reigned. In due course followed formal divorce, and wife and sons then changed residence a short distance along

the waterfront. My one time house and hers stood vacant, he on one side with business going strong, I on the other, sure that the hoodoo was but held up for the nonce, for the little widow still had no Cash.

She was now an employee of the Government, who had taken pity on the helpless widow. His promises never coming to fruition, even her great patience came to an end and she turned to the Courts. By process of Law, the Sheriff arrived. Neck and crop <sup>45</sup> out went that Surgeon and all was made seizure of, save his raiment and his personal tools. But did he feel crushed? Not he. From his mistress' latest nest, he sped along the streets at break neck speed to the many who still called upon his services — but no surgeon can exist without a surgery. The Maison de Santé was barred to him, though the sign still stood, a mute witness of the Past, but no longer 'hours of Consultation' and 'At night, ring this bell'. They had gone.

We were relieved, but not for long, for this indomitable fellow installed himself in the house next door, once mine and once his wife's. Thus again he was beside me. No flaring sign, but a small brass plate upon the gate post, and now gathering furniture, operating necessities and essentials of like kind from a friendly and affluent Chemist, he installed his mistress together with an efficient Chinese male assistant, a nurse and an outside boy. He was again in Clover, so he thought. But fierce opposition came. The Maison was reopened by two of his brethren, who had no love at all for him. A test was on for popularity. They misjudged the public. They were hard put to it for patients; he was busy from morn till night. I know, for living again next door to him, I had no choice but to note his activity, though discomfort was my lot for he carried out his operations before an open — or fully lighted — window, which I was forced to pass for egress and ingress, nor could I fail to hear the wails that issued forth both night and day.

Now he challenged his brethren to the limit. He erected as large a sign as theirs over his gateway. He felt sure that he had won. Then suddenly he disappeared. He had need to. It was not his brother surgeons who had struck him down; 'twas the little widow. A warrant was out for his arrest and jailing. It was this wise. She had charged him, when the Sheriff arrived and threw him out, with a further indictment, with pure theft of things which he had no right to under their agreement. She had won, but he taken an appeal to France. That takes time, months at least, if not more. He had lost his appeal. The Court sentence of two years jail held good, but had been allowed to be 'in suspense'. The widow needed the Maison to be a success, not a 'flop'; she stood by the holders of her lease. The blatant opposition must be crushed. The sympathy of the Court was with her. He was not acting squarely by her whom he had wronged. The 'Suspense' was cut out; the Sentence became at once effective. The Order for arrest was made. Now luck took a hand in the game.

He was without doubt down with the 'flu. A compassionate Judge gave him four days to recover. On the fifth day he was to report himself to the Chief of Police, rather than be handcuffed, as is the custom here, be he who he may. We, his neighbours, knew all this and felt sure that somehow or other, he would master the crisis. I saw both light and him at midnight, then sleep claimed me, but not him. Ere light of day broke on the fifth day, he had left the Clinic and was lost to sight. When the Brigadier arrived to act as escort to the Station, his entrance could not — or more likely would not — throw light on his disappearance. That it was no suicide was clear, for all was left in its place, save his special case of surgical instruments, and all the clothing was gone save one torn shirt. His outraged wife added to the mystery; there were no tears though, despite all; she had oft affirmed that of a truth, she loved him still, neither were his boys at all dismayed. They also knew naught. Where was he? Papeete was roused. It was the talk of the little town and all waited for the answer.

---

<sup>45</sup> *Neck and crop*: with brisk dispatch and completeness.

The police were handicapped from the start. The unruly doctor had been sentenced by the Correctional, not the Criminal Court, hence under French Law, no Search Warrant was obtainable. With amazing gall, a note came to the Chief of Police stating the terms on which reappearance would be made. They were quite unacceptable. Their belief was that his love of Life and a good time would sooner or later make his hiding unendurable; no caged bird was he and thus would he ere long betray himself. He surely had staunch friends; not a word leaked out as the weeks, then the months passed and the man sought still lay low. There was a strong suspicion held by both the police and the public that he was lying close to Papeete at the home of one who from time to time had acted as nurse for him. That home lay in ample grounds. His boys were often seen — as by myself on my daily walks — heading that way “to see their friend, the nurse,” but none ever got more out of them. One evening, however, grown bold or restless, he ventured up the driveway to the main road. A native wheeling into Papeete saw the fugitive and promptly reported to the police.

The then Acting Chief — the Chief on holiday — grown weary of the long pursuit, threw Law and Order to the winds. He motored to the house, met the nurse upon her threshold, bluntly stated that she was sheltering the fugitive and he had come to secure him. A timid woman and overawed by so high a visitor dared not order him off her premises, as she had fullest right to. The Chief stepped in, threw open the sitting room door and met his quarry face to face. The game was up; there were no theatricals; the Captor and the Captured drove to jail and the gates closed in on the long hunted man. He had been a fool for his pains, for if he had not given the Authorities the slip, he would have been placed on parole, to serve with his known talent at the main hospital, but now he would have to take his full dose of confinement. Time and again, he asked for such measure of release, but it was too late. Wife and sons returned to France. The long months dragged on and the close confinement told heavily upon him. He showed such clear signs of collapse that something had to be done. The Government solved the difficulty. He should have a change. An order was issued for his deportation. The French Mail Liner was in. He was taken aboard, Noumea his destination. Papeete had seen the last of him.

Since then, the Maison de Santé has seen brighter and better days. It is to be hoped that the hoodoo upon it has been laid for aye. But No!

#### Sequel 1942

La Maison de Santé is no more. It was burned to the ground. Only its concrete supports show grimly where once it stood. I had moved to the countryside years previously. <sup>46</sup> My one time residence, though close adjoining, stands, but not unscathed. An Allopath had given place to an efficient Homeopath in the quiet years before the final scene.

---

<sup>46</sup> Thus, WWB's house on the waterfront of Papeete, where this story takes place, was almost certainly not *The Bower*, his home outside of town (at that time), in Pirae. See *Papeete's Waterfront* below.

## BOOTLEGGING

It has passed, but it was highly interesting and diverting while it lasted. It is Anno Domini 1931 and Prohibition is the law of the U.S.A. It was no idle boast — as announced some months ago — that Tahiti, in defiance, was to be the rendezvous of ‘rumrunners’. With September, U.S. Bootlegging, with Papeete as a centre, became very active. It opened with 8,000 cases of whisky conveyed hither from Vancouver by the *Glenwood*, an American vessel. Local schooners (goélette), the *Valencia* and the *Pro Patria*, auxiliary powered, left fully loaded ‘for Mexico’, met the Revenue cutters of the U.S. coast and before their eyes transferred the goods outside territorial waters to fast boats awaiting. Now there appeared here a powerful tug from Vancouver, which came empty, but left loaded, the liquor piled high on its deck. There remained still much in the Customs Sheds. The tug also sailed ‘for Mexico’.

Next there appeared the M.S. *Lilliehorn* of Vancouver, with 16,400 cases of whisky aboard from the Vancouver, the New Westminster and the Marpole Distilleries. The farce — a necessary one — was gone through of unloading the whole lot on the quay, and forthwith putting it onboard again, together with many of those cases still remaining. Ranging from 12 to 24 bottles to a case, there must have been at least 350,000 bottles aboard when the motor ship sailed ‘for Mexico’. The cargo had to be landed in order to get Clearance papers, the local Government netting the handy little sum of 700,000 francs, at four cents each, by the transaction, a godsend to a well nigh empty Treasury. It is easy to compute what those 350,000 bottles would grow to when the Diluters got busy elsewhere; add another nought and then perhaps err on the side of moderation. This condonation by the French Authorities of an illegal act under the subterfuge of ‘Mexico’ appears to us locals of whatever nationality as a distinctly ‘unfriendly act’ to a friendly nation, and the natives smile at the white man’s ways.

This was but the beginning of things, according to the local manager, Murphy, a Vancouver man, who arrived some months back to make all ready for enterprise. The ‘Bootlegger’, as he is locally called, and is by no means at all resentful of the title, is worthy of a special note. A genial soul, immensely popular, with a heart as big as his purse strings, he became at once the Darling of a bevy of the truly respectable young women of Papeete by lavish expenditure on Ice Cream at the leading Parlor of our town. Everything was lovely till the mail boat from ‘Frisco brought a charming lady from the north; there was a visit to the Mairie where the nuptial knot was tied, and M<sup>rs</sup> Murphy took hold of the reins. With the proverbial fickleness of the sex, the young women now declared their adorable ‘Bootlegger’ to be ‘N. G.’ and transferred their love and allegiance to such fresh comers of our sex as are ready to pay for the smiles of these Charmers by unstinted outlay at the Sofa Fountain.

The French mail Liner from Marseilles was now reported to be bringing huge consignment of French wines and liqueurs to keep on the god work — and true enough, the M.M. *Recherche* landed 8,000 cases of a very mixed variety: special ‘booze’ from China for the throats of United States celestials; ‘Johnnie Walker’, both Red and Black label from Scotland; gin from London; still more whisky from Vancouver, this picked up off Panama; mysterious names from Italy and Antwerp; and from France, Vin Mousseux, Cointreau and Vermüth, with Cizano to tickle delicate palates. Once again, the *Valencia* was requisitioned, but made small inroad in the huge accumulation.

Now there arrived the *Hauraki*<sup>47</sup> of the Union Line on its downward trip, with 17,999 cases of whisky from Vancouver — one case mysteriously ‘shorthanded’. Perhaps the crew could explain. The little French goélettes have a busy time ahead and sorely need assistance. I have my eye on a possible assistant: the *Marechal Foch*, once Zane Grey’s<sup>48</sup> three-masted, auxiliary, *Fisherman*, used by him for many years in pursuit of the Big Game of the Seas, and now owned at a cost of one million Francs by that Reverend Father of the Roman Catholic Church of Christmas and Fanning islands fame.<sup>49</sup> It is a poor boat for pace owing to small horse power. But report has it that the grey-bearded Abbé holds aloof from such nefarious traffic, despite copra being so low in price and little freight now offering for those spacious holds. Maybe the ‘Bootlegger’ will buy it; there seems no limit to his purse. We shall see.

In the loading of the smaller vessels, one notices a change in the mode of transit. Not all are packed away in the hold in their cases; a thousand boxes are broken up — a godsend as to firewood for the lucky ones favoured to bear them off since firewood costs money here, most brought over from Moorea — and the precious drink is put aboard wrapped as in the boxes themselves in heavy canvas. This is for the accomodation of these smaller boats, which avoids taking up unnecessary room and allows stowing in corners.

Alas! the handling so roughly by the native longshoremen oft brings measure of disaster. Some bottles are seen to weep at the hard usage, and thirsty ones are seen to be catching the dripping liquid and enjoying a welcome taste on the sly, at times to their utter undoing. As I stood upon the quay watching the proceedings of this violent defiance of law, a husky fellow who had evidently been detailed for work in the hold and evidently had found no mere drips, but a perfect godsend of a crash, appeared upon the scene. He was not ordinarily drunk, but gloriously so and quite incapable of steerage. I looked to see the stern Arm of the Law lay hands on him, but one and all of the uniformed men turned their blind eye on their erring brother. Collapsing in a heap amid bags of copra, he was gathered up by two dark-skinned giants, stood up under a handy water tap and well nigh drowned. Last view of him was as he, supported by these friends-in-need, made slow progress through the town — every policeman having sudden call elsewhere — to his dwelling place, there to recover and duly return for more.

---

<sup>47</sup> MV *Hauraki* was built in Scotland for the Union Steam Ship Company of New Zealand Ltd in 1921. In 1942, it was captured by the Japanese and renamed the *Hoki Maru*. In 1944, the vessel was torpedoed by the USS *Bunker Hill* in Chuuk Lagoon, [where it is popular with divers](#).

<sup>48</sup> [Pearl Zane Grey \(1872–1939\)](#). See *Big Fish* below.

<sup>49</sup> [Emmanuel Rougier \(1864–1932\)](#)

This for the native. We white folk are in no position to throw stones at him. Abundant evidence against us is to be seen around. It speaks volumes when the following printed Notice is to be seen in the leading Parlor of Papeete. Its ragged, bungled English is not repeated in either French or the native tongue, but aimed solely at both American and British folk, women as well as men:

Please

Permit the Management to Repeat  
For a Certain Class of Intruder :  
Drunks, Near Drunks, Would be Drunks  
And Acting Drunks  
Strictly Not Tolerated.

Not a few of such folk have happily been Deported by a hardhearted Authority.

At present writing, the stock in Customs' Sheds still stands piled to the very roof. The business is in full running order; all parties are satisfied; thirsty ones in the Western States need not lie awake at night wondering if their supply will run dry; Canadians fill their pockets with the 'unfriendly' spoil; the French have a new and welcome source of revenue; ships and schooners find paying cargo; whilst the longshoremen of Papeete have great increase to their oft meagre earnings, with a free sip of the forbidden nectar into the bargain.

## THE ADVENTUROUS NATIVE

Here, today, in *durance vile*,<sup>50</sup> are certain ones who despite their wrongdoing are instances of amazing pluck. Amongst them there is a native of Punaauia village but a few miles along the coast from Papeete. Not for the first time sentenced, he was working under armed guard, along with others on the Highway when, watching his opportunity, he slipped away and took to the hills. The hue and cry went round the island, but despite all, he worked his way to the southern end, crept at night to the shoreline, stole a canoe and made for Maio, a small island forty miles away. Arriving, he was suspected, but left alone. A schooner calling in took word back to Papeete and a gendarme was sent to secure him. But his quarry was wary, and stealing another canoe and a few handy coconuts, he set out for another Isle of Refuge, any one of the Leeward Group over one hundred miles away. The weather was against him; the sea was rough; his outrigger broke; his supplies ran out; he lost his paddle and propelled himself with the tiny canoe seat. For eleven days and nights he fought with Fate and won, landing on Pora Pora. But the Arm of the Law reached out from Raiatea, secured him and bore him back to Papeete.

His amazing deed availed him nought, but he still had fight still left in him. A few weeks and again he escaped and took to the hills. Months passed and the police were completely baffled. They came to the conclusion that he had slipped through their fingers and had stowed himself away on some foreign steamer lying in port. Far from it, for all the time he was in the mountains above his mother's home, whence supplies never failed to reach him. Natives know how to keep silence when real need exists. But Fate failed him. He fell desperately ill and for days lay in his mother's home, all unknown to the village gendarme. He grew worse and the village R.C. priest was sent for, who said it was hospital or death. The game was up. Justice got him after all, though for weeks he lay a wreck. Today he works out the remainder of his sentence, and many added months for his breaks away, whilst his gaolers are very uneasy, for even prison bars and armed guards seem incapable of holding this native, possessed of such daring and resourcefulness.

An even more amazing story comes to hand today, for it deals not with Manhood, but with Boyhood, and the one hundred miles at sea reaches out to over a thousand. The Gambier Islands (Mangareva) lie nine hundred miles to the south of Tahiti. Three boys, not brothers, aged respectively fourteen, fifteen and seventeen, growing weary of the monotony of their island home, determined to see the world. Their world was summed up for them in one spot, the Mecca of all French Oceania, Papeete. The stepfather of one of them owned a small broad-beamed Cutter, useful for fishing and pearling, cabinless and decked only in front of the mast and slightly along the sides. Laying in coconuts and such other food as they could secure by stealth, so as not to excite suspicion, they set out at night — a fourth boy backing out at the last moment — but securing for his friends a lucky find of arrowroot. They had no compass, but by wary questioning of their elders had learned that the way to Tahiti was by sailing straight into the Sun. But if no Sun, what then? There was no answer to that, save the compass, and they had none.

Nothing daunted, they made their way through the Pass in the Barrier reef and headed north. Days passed and they saw one of the Atolls ahead of them. Here they landed for supplies, but naturally the natives drew conclusions and proposed to hold the runaways. Scenting danger, they got what they could from junior sympathizers and sailed again at night time. By luck, they fell in with an uninhabited Atoll, one of the few 'rookeries' in the Group. Here they secured many young birds and coconuts, depending on the rain for drinking water should the nuts be exhausted.

---

<sup>50</sup> *Durance vile*: a long prison sentence

Once again, they set their tiny cutter into the Sun and sailed out into a vast expanse of ocean, Tahiti still nigh eight hundred miles away. The rains fell; the Sun was hidden; the weeks passed and they actually got too far to the West to fall in with the Isle of their dreams. They passed it far off, all unwittingly. Now — though unbeknown to them — they had but three outlying isles of the Sous-le-Vents, tiny specks and mountainless before a stretch of ocean that must inevitably have been their end. Their food had gone for days; they were growing weak; the elder two were even muttering threats against the youngest. He was badly scared, and at night as the others fitfully slept, beat the tiller, in sheer desperation, put the cutter clear off its course, and headed blindly any way. As the daylight broke, they saw land, Bellinghausen, the outermost of those isles. It was the last chance and they had not missed it. Landing, they had sailed well over a thousand miles and had triumphed over storm and hunger. A schooner happening to be there for copra transferred them to Mopeha, whence news was sent to Papeete. The Government sloop stationed at the little Capital for police work throughout French Oceania went off, bringing both runaways and the cutter hither. Alas! for their dream, their first interview was not with the belles of Papeete, to be festooned with garlands and welcomed as heroes, but with the Chief of Police and the jail, their home till schooner sailing south should bear them back, sadder but wiser boys, but none the less boys of amazing pluck, who one felt deserved a more cheerful ending to their Great Adventure.

What natives can do, white men are oft under the delusion they can emulate them with perfect confidence. But a short while back, I saw two stalwart friends off, two of a large party headed for the Australs on Scientific business. The party reached the southernmost isle of that group, Raivavae, and wearying of the delay in the arrival of a returning schooner, all research done, these two, despite the grave warnings of the natives, decided to make for Tupuai, the next island northwards, sixty miles away. Their companions preferred to wait. They purchased a double canoe constructed on the ancient pattern and set gaily out. From that day to this, no word has been heard of them.

The Great South Sea holds its secrets tight. Daring alone will not suffice when Man challenges these miscalled Pacific waters. The native is to the manner born; we had best ever have them with us when we venture out.

## BIG FISH

I am no fisherman. Never was. I cannot escape, however, from an attempt to picture a phase of the outdoor life of French Oceania even if, to experts, I may err in details. That Big Game Fish were in these Tahitian waters has always been known; they have been seen and encountered by natives and whites as far back as local history goes, but accurate knowledge by systematic capture and classifying has only taken place during the past few years. Swordfish and sharks of incredible size, ferocity and speed have left their mark on both man and boat. Lately two natives were fishing by night with flares off the village of Mateia, outside the Barrier reef, when a swordfish rushed them. Its spear pierced the thigh of one of them and broke off short. His companion brought him ashore; he was rushed to hospital. He lives, but is a cripple for life. A schooner set sail for the Tuamotus, those 'Atolls of the Sun'; it was to be gone one month; within ten days it returned mysteriously leaking. The crew had searched in vain under the hatches and the cargo. The boat was run up on the Papeete Slipway when, low down, there was found the spear of a swordfish, which had pierced through sheeting and plank, then broken off short. The giant fish were here; the question was to land them. But none locally were capable of such an operation. It meant a huge expenditure of Time and Money, a special knowledge of the method of attack, and an Outfit only possible to a millionaire.

Zane Grey, Author and noted Big Fish angler, heard the call and answered it. He had fished the California waters; Nova Scotia had seen him, Catalina and the Florida Keys, the Galapagos and New Zealand. It was from the Bay of Islands, N.Z., that he came hither to fish in unknown waters. He arrived in 1928. Each succeeding year he has returned, his doings and his records known to all of us. He has won out, but not easily, the labour arduous, the cost enormous. All may now know some of the Big Fish Tahitian waters hold, but Zane Grey is the first to own that there are those still unknown, flashing glimpses caught of monsters which natives name with bated breath.

And what an Outfit. It grew as the years succeeded. At first, the three-masted auxiliary schooner, the *Fisherman*, with two swift 35 foot launches; the storeroom of the parent ship stocked with tackle; expert natives were aboard from other lands; motion picture outfit with specialist to handle it; luxurious quarters for the Chief and his chosen white companions. The next year there arose at Vairao, some forty miles south of Papeete, a Camp, but really a small village, a bluff cleared save for waving palms and breadfruit trees, with half a dozen bungalows brought intact from California, four of them placed on the top of rising ground with glorious view, the rest below. A special dining Hall to set all off. No longer a couple of swift launches, but twice the number, with extra powerful engines for the work. More powerful tackle and rods of amazing strength, for the Big Fish had already taught the Chief many a painful lesson of defeat. And now yet another addition. In place of the *Fisherman*, there steamed into Papeete a vessel twice its length and size; no more sailing, but a sumptuous steamer ready and able to tackle any seas, for the Chief has yet wider areas to search; one hears of New Guinea and distant Madagascar. It is named *Fisherman II*. Its predecessor lies at anchor in the lagoon. Its fishing days are over; its luxuries have departed; its cabins vanished; it is a freighter Father Rougier runs to his copra-bearing islands. I saw it lately on the ways; for all its years, its timbers appear sound, though there are patches here and there. Two of the earlier launches have gone also, sold to local, though evanescent, Americans, who try to emulate Zane Grey and may or may not succeed.

One cannot mention the Chief, however, without at the same moment mentioning his Alter Ego, his Major Domo, Captain Mitchell.<sup>51</sup> They had travelled and fished together for years. They each held records of Big Fish. The Captain was a retired English Army Officer, charming company and soon

---

<sup>51</sup> [L.D. Mitchell \(d. 1931\)](#)

exceedingly popular ashore. Each had fine success here; spearfish or marlin, swordfish and sailfish, tuna, barracuda and wahoo. No ordinary ‘spoon’ is used; it is rod and line with, if possible, live bait and ‘teasers’ of human make to attract. These latter are ‘fake’ fish, without hook, made of wood, appropriately painted, and hung out from each side of the launch. At the stern of each launch is a fixed seat of solid make, and, in front of it, a socket of brass for the rod, with a clutch to hold it fast. To see that rod bend when a fight is on is a sight worth seeing. They break at times, just, of course, when hopes are highest.

It was sometime before the best bait was discovered for these monsters. The bonito <sup>52</sup> is a greatly enlarged mackerel, running from 6 lbs up to salmon size. This fish is to be seen in Papeete’s fish market well nigh the whole year round, but their main run is during the rainy season, October to March, and it is then that, in chief, the Big Fish are to be met with. Yet it was in May that the supreme triumph was landed here: a striped marlin, length, 14 feet, its weight 1040 lbs, which it was claimed to be then a world’s record. Suspended on a tripod on the Beach, it was intact save for a perfect and sound tail, which unfortunately it lacked and would have added pounds to its weight. When in its dying moments, after a mighty struggle of hours on end, it was brought up alongside the launch, the tigers of the Sea attacked and tore off great chunks nigh the five-foot fluked tail. Still more would have been lost had not the launch at full speed drawn the Big Fish into shallow water.

Next in rank were landed on the Beach a silver marlin (said to be a new species) of 618 lbs and others of 464 and 357 lbs. A sailfish 10 feet long tipped the scales at 163 lbs and a dolphin <sup>53</sup> of 63 lbs were later to be seen. With sharks, both great and small, there is continual battle; they dispute every prize and at times win not. One, however, to the angler’s joy, over-reached itself. A tuna <sup>54</sup> had been hooked safe and sure, and was being steadily drawn up and closer to the launch when the line suddenly slackened, then grew taut again, but far heavier to haul. A 300 lb shark appeared instead of the tuna. Gaffed, it was got aboard. Within it was found a 60 lb tuna, with the hook in its jaw. That shark was over-greedy; nothing but the tuna inside him held him to the line. Refusing to eject his prize, he lost out.

But some Big Fish have been seen hereabouts which even renowned fishermen as Grey and Mitchell have had no desire to tackle. Natives have ever been insistent that giant sharks were to be met with in the waters around the Tuamotu Atolls. There came a day when Zane Grey, in his swift 35 foot launch, was trolling off Rangiroa when his ‘lookout’ man — an old time N.Z. whaler, seated on the top of the cabin — called out that a whale was slowly rising alongside the boat. Soon a clear view by those aboard of the monster fish saw a body range itself five feet beyond the full length of the launch, and a breadth of body computed as at least eight feet. They let it pass right gladly. Yet another monster was a ray twenty feet across, over which they slowly passed. It was felt best not to arouse it.

Curiosities have appeared. There was the ‘green fish’ utterly unknown to all save the natives. Caught from the deck of the *Fisherman II*, it was drawn up and astonished all. Its weight, 100 lbs. It had green eyes, green scales, green flesh and green blood. Natives aboard declared it to be rankly poisonous and none ventured to test the truth thereof. <sup>55</sup>

<sup>52</sup> [Skipjack tuna \(\*Katsuwons pelamis\*\)](#) are called *bonito* in French Polynesia.

<sup>53</sup> [Mahi-mahi or common dolphinfish \(\*Coryphaena hippurus\*\)](#)

<sup>54</sup> [Yellowfin tuna \(\*Thunnus albacares\*\)](#)

<sup>55</sup> The [photograph of poisonous green fish, Tahiti](#), shown below, is from the Zane Grey Papers, L. Tom Perry Special Collections, Brigham Young University. We can therefore assume that it is the actual fish that WWB describes and that the vessel is the *Fishermen II*. The fish is almost certainly a [humphead wrasse \(\*Cheilinus undulatus\*\)](#). While similar, Zane Grey’s fish lacks the vertical head profile of the [green humphead parrotfish \(\*Bolbometopon muricatum\*\)](#). The islanders

No need to dwell on the terrific strain which the capture of Big Fish entails. Arms, back and legs ache to well nigh breaking point. There can be no let up, not for a moment, while the struggle is on. For hours on end the launch manoeuvres to meet every fresh tactic of the fish, and daylight fades at times ere the final leap is taken and the man lands his prize.

There came a sad ending to all this here recorded. There was trouble in Vairao Camp. I sense it was white women's quarrels. Mitchell stood stoutly by his, Zane grey by his. Mitchell was adamant Zane Grey was stubborn. The breach grew irreparable. The Captain gathered together all his belongings and his own swift launch, and found temporary quarters elsewhere. Then the Chief, realizing what he had lost, made great effort for reconciliation, but the soldier's wound was too deep for healing. Grey sailed away to other seas and Mitchell, with wife and belongings, took the mail steamer to 'Frisco *en route* for Home. I saw him off. There was no doubt of his popularity. He waved goodbye with his cheery smile, but, of a truth, his heart's deepest interests were snapped. To him, Big Fish were his absorbing thought. He had served his Chief for many years, most tirelessly and faithfully; he had no thought of his own renown and record, to Zane Grey must go his triumphs in the chase. The long strain had been great, both mentally and physically. Now the reaction came. But halfway across the United States, he sank and Passed Out — a traveller to the end. He was a fine English gentleman and a very valiant fisherman.

---

are correct; the humphead wrasse preys on animals containing toxins and thereby becomes toxic itself. Cats in the region, as shown below, are thought to be adept at avoiding fish containing toxins, such as those causing [ciguatera](#).

## THE UNTUTORED NATIVE

Said a lately arrived American to me as we sat beneath the shade trees on Papeete's waterfront, "For long years I have looked eagerly forward to this day when with both means and leisure I should see the true native life of the far famed South Sea. Instead, since my arrival, now weeks past, I see Frenchmen, Chinese, half-castes on every hand, the pure Polynesians a mere sprinkling among them. I have roamed this island and it's all the same. But you are a vagabond, have wandered amid these islands; maybe you can help me yet to see my dream come true. I want no half-baked sample, but so far as possible what the early voyagers saw. I fear I have been born too late in Time." I assured him that I could in one measure help, that there were still islands so cut off that their inhabitants were largely uncontaminated by present day civilization, and named one — which shall be nameless for its own future peace — within fairly easy reach of this Garden of the Pacific. His thanks were profuse. I saw him off. He was far from empty-handed, both with choice food and gifts. His last words were, "Don't look for me for many moons." I thought otherwise for, by then, I had seen enough of him to know that both his Past and Temperament were wholly against success in his quest.

The weeks went by and the schooner, after making its many calls, was due to return. I was on the quay. My friend, as I felt sure, was aboard. Landing, he made straight for me. "The unadulterated native! Heaven forbid that my lot should be cast among them! Eight hours between the anchoring and the sailing of this boat were enough for me. I am thoroughly disillusioned and thankful indeed that my Day is now." He kept to Papeete till he left. Later on I heard that he had suddenly dropped dead on the streets of his hometown in the State of Washington.

What he met with can more or less be seen by the story of the Long Ago as described not by Admirals and Captains of men-of-war, who had but scantiest time on their hands or knowledge of the language, but by one who got closer to facts than ever they could and who passed in and out among the natives, not for a few weeks but for nigh twelve months. I turn to a sedulously kept diary in Spanish, its date 1775. Its author a private of marines, young, strong and fearless.<sup>56</sup>

How came he hither and why? Of European nations, the first to sight Tahiti were the British. They landed at the northern end, had a look around, then sailed. Next came the French, who dropped anchor on the eastern coast, stepped ashore for a few days, and then were off. Now came Spain from its Viceroyalty of Peru, who made anchorage at the southeastern most end of the island. They came because His Most Catholic Majesty, Charles III, had heard of these British and French explorations, which, according to him, were gross intrusions, since he claimed on the authority of the Pope of Rome complete sovereignty of the whole 'South Sea'. He purposed occupying Tahiti for himself, and, as a good Catholic, spreading the faith among its inhabitants. The first visit was followed the next year by the arrival and setting down of two priests and two lay brothers, one of the latter as cook and gardener, the other the young marine, Maximo Rodriguez, as their interpreter. He came to that duty by rapidly acquiring the language from four natives who had been borne off willingly in the first ship. The priests were not of the stuff of which heroes are made. They rarely stepped outside of their fenced domain, kept the dreaded natives at a distance, and longed for the day of their deliverance, which within a year arrived and with the end of Spain's occupation, for His Majesty's power was on the wane.

Maximo was of different mould. He was out to see everything, went everywhere and was evidently a very popular young man. From him we gather much as to the untutored native. We might know much

---

<sup>56</sup> See *The Grand Tour* above, and the references given in the footnotes.

more, for a Supplement to his Diary, in which he says he had noted more fully the customs, rites and usages of the natives, was unfortunately lost in some unknown way on his return to Peru.

Amid much of them wholly charming, he reports their welcome to be very hearty, even boisterous, but somewhat embarrassing. To be kissed by both sexes on each temple and cheek was right enough, but to be embraced had its disadvantages. Their bodies reeked of coconut oil, its rank smell but poorly concealed by sandalwood dust and other scents. Tears were always 'on tap', some through sheer excitement, others for seemingly no reason at all. Their clothing very scanty for either sex, save that of the Great Ones of the land, their bodies heavily tattooed, their ears pierced for a flower to hang from or a few pearls strung on a coconut fibre thread. Their huts most primitive and without partition as a rule; their chairs, the floor; their beds, dried grass or a woven mat; native cloth for bedding; concave stools of wood as neck rests of nights; and above them, suspended from the roof, baskets slung to keep their food and belongings, to the disappointment of rats.

Among other strange foods, dog was served, bred and fattened for the table. Raw fish was set before you, unappetizing in sound, but served up in native style, with lime and coconut milk, is in much request of white folk today. Fermented breadfruit, an appalling dish, a foetid, penetrating, overpowering odour enough to kill all appetite for the black concoction. Music on weird reed instruments, hideous to the cultured ear. Cock fights, a delightful pastime. To be sick meant strange herbs, incantations, much thumping of the poor body and massage. Theft as natural as breathing.

All this the young man saw, and much of it, my friend. For myself, I have seen enough; the untutored native of today holds no attraction.

## THE POMARE DYNASTY <sup>57</sup>

Till white men sailed into the waters of the Pacific Ocean, Royalty, as we conceive it, was unknown upon the islands. There were Great Chiefs and Lesser Chiefs; beyond that grade, ambition as a rule did not soar and when attempted, all combined to suppress the would-be superior and, except in the cases of Kamehameha of Hawaii and Taufaahua of Tonga, were successful. But to such men as Captain Cook, as Bougainville, Byron and many another, a King of every Group was a necessity. As there were none, they created them, only, however, to cause enmity, confusion and bloodshed. Such a case was Tahiti. It was by the sole support of white men and missionaries among them that the Pomare Dynasty arose. It has now passed and there are none to regret its demise. The name itself of this Island Dynasty was not a family surname. It was but a secondary name assumed by the first, meaning a ‘night cough’, with which he or one of his was troubled, but it stuck, to the obliteration of his real name, shortened to ‘Tu’.

### The First Pomare

#### Tunuiea’aiteatua

The date of his birth is uncertain. When Captain Wallis, in 1767, landed at Matavai Bay, he was a young man, a Chief indeed, but kept in the background at that time by an older and masterful neighbouring Chief Tutaha. He developed into a big man as to build, alike as all Polynesian Chiefs appear to have been. He was a savage to the end of his days, the first missionaries unable to make anything of him, but he — finding them very useful in procuring him not only supplies, but guns and powder either directly from themselves or their influence with visiting ships — was always their friend. From his birth he was the Chief of two Districts in the north of Tahiti, Paré and Arué, according to the Tahitian custom that the first born at once assumed his father’s position, the latter becoming his guardian. In time, he dropped Tutaha and stood alone.

Fortunately for Pomare, Matavai Bay lies in Arué. Here throughout his life, from Wallis’ day, ships dropped anchor. Papeete was non-existent as yet, and the narrow Pass into the lagoon was feared as unsafe for ships. True it is that de Bougainville dropped anchor at Tautira, but soon every vessel made for Arué, where Pomare made them welcome. He was ambitious from the very first, and when his spears were laid aside for muskets, he had a terrible advantage over the rest of the island’s Chiefs. He fought persistently and relentlessly, but not in his day was the whole of Tahiti subdued. He is, however, erroneously reckoned as the 1<sup>st</sup> of his Dynasty from Captain Cook’s recognition of him as King. On Cook’s first visit, the Captain was inclined to give the title to Amo of Papara, but when he returned, he found Amo crushed and Pomare on top. There simply had to be some King or other, so he fixed on Tu and, to the anger and disgust of all the other Chiefs, treated him as such. This savage had his reverses as well as victories. He was far from actually courageous. When things went wrong, he fled across the Strait to Moorea, till the clouds rolled by. He lived to see his son reach manhood, a worse and even more cruel savage than he, and died in a canoe as he made his way to a visiting ship then anchoring in Matavai Bay in September 1803.

---

<sup>57</sup> For information regarding the Pomare dynasty, see also Part IV, *Tales of a Roaming Grandfather*; Part VII, *Articles By and References to WWB in the Pacific Islands Monthly*; and Part IX, *Old Time Tahiti*.

## Pomare II

### Same name as his father's

Another, big of build, and determined at all costs to complete the work of his father. With this end in view, he gathered to his aid not only the white man's muskets, but white men themselves, deserters from passing vessels, wrecked marines, and — till H.M.S. *Pandora*, of evil fame, came hither to gather them in — those of the Bounty mutineers who had not fled to Pitcairn. But even with these, he could not master Papara. Beaten, he fled, like his father, to Moorea and the whole body of missionaries — save Nott,<sup>58</sup> the one time bricklayer — to Botany Bay. The crafty savage now tried a masterpiece of strategy. He decided to become, nominally, a Christian, and, forming a Christian party, proclaimed a religious war. It was to be Christianity against Paganism and a fight to the finish. His first wife dying childless, he further decided on another with powerful connections. He promised to marry a Great Chief's daughter from the Sous-le-Vent islands. Her younger sister forestalling her, he accommodated them both — there were thus two Queens of Tahiti. He sent his wives across to Tahiti to start the fight, but they and their followers fled before the Pagans. Then he gave out that he had done with fighting and promised to return to Arué and there live in peace. The Pagans took him at his word. He came and quietly gathered round him all the Christians, not only on Tahiti, but on the neighbouring isles. Suddenly he swooped down on the hated Papara, massacring right and left. Opuhara, the Pagan Leader, fell and with him went all opposition. Pomare was King and the 1<sup>st</sup>. Later, through the efforts of the missionaries, he had a Code of Laws drawn up and, as a sign of conversion, raised a Temple in Arué of cathedral size, determined to outdo King Solomon of old. It was 712 feet long and 54 feet wide, had 29 doors and 133 windows. It had three pulpits and three sermons were delivered at the same time. It held over 2000 natives at a service; a hollow farce, as the missionaries' letters prove. He died in 1921, leaving a daughter of seven years of age and a son, an infant in arms. He passed his sovereignty to his boy.

## Pomare III

### Teriitaria

His story is soon told. A baby in arms, it was not till he was nearly four years of age that the missionaries went through the formal ceremony of crowning the child — the first coronation in the whole South Sea. As there is no record of a jewelled Crown or even one of tinsel, it is to be presumed that he was crowned with flowers, a Tahitian custom with all today for pleasure alone. He was robed in the house of a missionary; they headed the procession, one of them leading with a large Bible in his hands. The Crowning was performed by the missionary Nott, who handed the infant the Code of Laws of his Kingdom. They then bore him off to their School, the South Sea Academy, recently opened on Moorea. There he was taught till he was nearly seven years of age, when he fell ill, and being carried over to his mother and aunt in Papeete, died in 1827.

## Pomare IV

Hers was a long and troublous reign. There was fighting, too, but not Tahitian with Tahitian, but Tahitians against the French. She was but thirteen, this girl Queen Aimata, 'Devourer of Eyes', brought up by the missionaries, though at times very wayward, and throughout her life devoted to the

---

<sup>58</sup> [Henry Nott \(1774–1844\)](#). See *The Missionary Henry Nott* in part IX, *Old Time Tahiti*.

English. She was a contemporary of our Queen Victoria, to whom she appealed for aid more than once, but in vain, for protection against France's hunger for possession. Her incongruous name is to be explained by the ancient custom of presenting the High Chief at the time of human sacrifices with an eye of the victim being then offered to the gods, the head being held to be the sacred part of the human body and the eyes as its most precious possession. This was formally presented by the priests and pretension made to eat. When only eight she went through the form of marriage with the youthful Chief of Tahaa, but when twenty-two she discarded her indifferent husband and married her cousin, by whom she had a numerous family.

In 1836, two Roman Catholic priests arrived at Papeete from the Gambier Islands and were refused a landing. One Creed was thought sufficient for Tahiti. Once again, they tried and were again turned back. The next year, the Vicar Apostolic of Western Oceania arrived and was courteously received, as he made it plain that he was opposed to settling missionaries where others were already, but this was not the policy of his Home Government. In 1838, Commodore du Petit Thouars <sup>59</sup> arrived from Valparaiso in the French man-of-war *Venus* and presented an Ultimatum. Any and all Frenchmen were to be received, or he would blow Papeete to pieces. Defenseless, the Queen surrendered. A French Consul was appointed and the Commodore left. An appeal was sent to England, but was turned down; Tahiti was too distant and England's hands were full. Thouars now turned up again and declaring that the handful of French upon the island had been harshly treated, threatened hostilities unless now a Protectorate was accepted. It had to be. Again he left, but returning in 1843 to report the official acceptance by his King of the Protectorate, he fell foul of combative missionary Pritchard, <sup>60</sup> who was Acting British Consul, and decided to annex the island. Hauling down the Tahitian Flag ashore, he raised the Tricolor. Again an appeal to England and once again a refusal. But the Sailorman had gone too fast; the French Government, with its King, turned him down. The Protectorate must suffice for the time. A Commandant was appointed and soon he had his hands full. The Queen had fled to her mother's isle in the Sous-le-Vents and refused to return under the Protectorate. The natives rose; French soldiers and Tahitians clashed; lives were lost on both sides. The only hope of Peace lay in the Queen; long she held back till definitely assured that England refused to interfere. She finally, in 1846, gave in, landing at Papeete, where a Royal Salute awaited her, and was conducted to her palace with every mark of respect. She had bowed to the inevitable, but till her death, in 1877, remained loyal to her upbringing. Her eldest son dying when but eighteen years of age, she was succeeded by her second son Tera-tane.

## Pomare V

Big of build and a thoroughly dissolute man from youth up. He married for his second wife the half-caste daughter of Salmon, an English Jew. There were no children by him and he secured a divorce. In 1880, he handed over his Sovereignty to France, complacently giving away at a handsome price his birthright and his people. He died in 1891, and with him the Pomare Dynasty expired.

<sup>60</sup> [George Pritchard \(1796–1883\)](#)

## PAPEETE'S WATERFRONT

It lies along a half-moon shaped lagoon. The straight edge is the Barrier reef, with but one break therein — the Pass. No matter how the waves thunder on the reef, within all is peace. Rarely are whitecaps seen, and never waves. The ends of the half-moon do not touch the reef; the lagoon waters sweep between the reef and the land to pass out of sight to other similar lagoons. The widest stretch from waterfront to Barrier reef is some four hundred yards, with an islet covered with coconut palms hard by the reef. This was a Royal possession till Sovereignty went to France; its buildings of today are seen peeping thro' the trees.

No part of the grand sweep of the shore is wasted ground. On the extreme right as one faces the sea are the shipbuilding yards, a miniature dry-dock and marine railway, all half buried from sight by the palms. Now comes the coaling wharf, not a thing of beauty, and hard by what Papeete is rightly proud of, the Quay, where the steamers lay alongside, no construction of mere piles and wooden flooring, but piers of reinforced concrete, as is its surface, with many large sheds for storage. So much is business.

From the Quay onwards clear round the rest of the curve is where Charm lies. In years gone by, the shore doubtless shelved gradually to the sea, but today the grade has been filled up and a retaining wall built, its top level with the ground on which one stands, with the result that there is deep water enabling schooners and yachts to tie up all along the front. One of the peculiarities of Tahiti is that there is practically no tide; a foot rise and fall, that is all. It is, of course, unnoticeable against this low wall, and can only be seen where the shore has been allowed, at the far end of the curve, to slope down to the sea as of yore.

The made ground has been well used by the Authorities. A stretch of grass runs along the front, with giant shade trees at regular intervals, veritable huge umbrellas to ward off the sun from the concrete seats set in two and two between them. Here one can sit in comfort and gaze out to sea, watch the combers dash themselves into spray, and the schooners making the Pass. Natives are to be seen fishing in their outrigger canoes; motor boats are careering about on business or on pleasure; and men, women and youth of all ages are disporting themselves in the warm water. One special spot appears to be sacred to these unrobed Sun Bathers and their thus exposed anatomy seems to call loudly for it.

Back of the grass and the trees runs a road, not of concrete, but kept immaculately clean with broom and scavenger cart, and across it rise a line of homes, businesses and hotels, boarding and private, a mixture of architecture, but none wholly out of keeping. The American Consulate is here and the Post Office, with a charming little park alongside, with abundant shade trees and moveable seats, whilst far along, past many a little bungalow,<sup>61</sup> one comes to the native Church and the British Consulate, where the waterfront proper ends. All this sounds peaceful indeed and hardly likely to harbor thrills, but that is where a mistake is made anent these so called Isles of Dreamland.

I have seen instances otherwise. Let two suffice. The mail steamer had whistled to be off; the crowd had gathered for the parting, but there seemed a hitch. Rumours flew fast; police were seen coming and going; the ship's officers and the Agent were in eager converse on the wharf. Soon after, there

---

<sup>61</sup> This may have the location of the bungalow on Papeete's waterfront in which WWB lived, after residing in the Hôtel du Diadème in Papeete and prior to moving to Pirae. Regarding the Hôtel du Diadème, see *Tahiti and Historical Research* in Part I, *Notes On the Life of WWB*, and the footnote in Chapter II of *Across Tahiti Afoot* in Part XIII, *Roamings In the Great South Sea*. Regarding the bungalow on Papeete's waterfront, see *La Maison de Santé* above. Regarding his residence in Pirae, see *Tahiti and Historical Research* in Part I.

came trooping down the gangplank every Steward of the ship, next came the stokers and next came the neat-capped stewardesses. They formed a compact mass and by no means a silent one. Now we learned the reason. One of the crew, off for the day, had dined and wined, not wisely, but too well, and on his way back to his ship felt game for anything. Spying a shirt hanging out to dry, he walked into the yard and annexed it, tying the arms round his neck for very joy. He paid no heed to the protestations of the native laundress, who raced off for the police. They gathered him in; his drunken joke had taken quite another turn. The Charge was Theft and a cell held him. The ship's company took the position that their companion sailed with them or the Captain sailed without them. The police and the Governor took the position that a thief was a thief, and refused to hand him over. The hours passed and neither side would give way. Suddenly there came marching upon the wharf a company of soldiers with fixed bayonets. The idea was to herd the whole lot of malcontents back upon the ship. Real trouble was now very close. The men were in ugly mood; they openly averred that if a bayonet was lowered against them, they would throw the whole lot of soldiers into the lagoon, and they certainly could have done it for they outnumbered soldiers and police ten to one. The Lieutenant held his hand; the police Superintendent did likewise. The steamer had to go; it carried the mail; the officers alone could not take the vessel to sea and the crew were now clearly out of all handling. It had been long dark when an auto arrived and out of it stepped the Author of all the Trouble. A huge cheer broke the still evening air; "God save the King" rang out; the malcontents filed back; the lines were cast off; and as the mail boat left the wharf, "Rule Britannia" burst forth from a hundred throats.

A wire had come from faraway Paris to the Chilean Consul here to send with haste a schooner to Easter Island, nigh two thousand mile away to the east, to succour and bring off a Cinema Company who were stranded there. Tahitians are cinema fans of the deepest dye. Their hearts went out to the unfortunates, especially to those of the weaker sex. Off with a rush went the *Valencia*. Long weeks we waited till at last the schooner was seen making thro' the Pass. Excitement ran through the little town. As the boat drew up alongside the wharf, all eyes were on the passengers on deck. But where were the Ladies, those fair ones with the golden locks to be seen in the movies? Men only were visible. Down the gangplank walked two men of most soldierly bearing, Colonels at least, and a middle-aged one who seemed badly in need of a barber, these followed by a younger man, all smiles. The whole thing was a hoax. All but the younger man were Chilean revolutionists, who had been exiled to Chile's Easter Island, the smiling one being sent along with them as a Governor of the island, with orders to shoot the three if they attempted to escape. But the three had converted their gaoler. Their Junta in Paris had concocted the Cinema story and their rescue was as much a surprise to them as to the *Valencia's* Captain. The gentleman with the abundant hirsute <sup>62</sup> growth was a Chilean lawyer who, by his defence of the two of soldierly bearing, got the same sentence. One was a General; the other ranked as a Colonel. As they had no passports, there was great talk by the Authorities upon the wharf. Police took them in charge, but never a cell for them. Everything was lovely from the first. The Colonel was immensely wealthy, with Paris at his back; their stay was a prolonged picnic, not only for themselves, but for the friends they made, and they — most certainly, the Colonel — were extremely popular. Into port soon after came a Chilean man-of-war. Though nothing would induce the Exiled to set foot aboard, they fêted and feasted ashore, every man aboard from its Captain down to the cabin boys. When at length they sailed for Paris, by way of Panama, the wharf rang with cheers for the 'mutton chopped' whiskered Colonel, <sup>63</sup> as the undoubted future President of Chile, which,

---

<sup>62</sup> *Hirsute*: hairy

<sup>63</sup> [Marmaduke Grove Vallejo \(1878–1954\)](#) was exiled to Easter Island in 1930 and returned to Chile, via Tahiti, in 1931. He was never the president of Chile, but was responsible for the military coup of 4 June 1932 that established the [Socialist Republic of Chile](#). The Socialist Republic lasted only twelve days, after which Grove was again exiled to Easter Island. See [Chile: Progressive Socialism](#) in the 20 June 1932 edition of Time.

though seemingly so hopeless a project, became, before many months had passed, the accomplished Fact, but alas! only for a while. Chilean politics are erratic things.

## RAMBLING AROUND

Papeete for the most part has raised itself from a few fishermen's huts to the Capital amid a natural harbour. There are those who would cut down the abundant trees; there are others who as stoutly defend them. True, the mangoes, with their delicious fruit, are untidy fellows, dropping the full ripe fruit helter-skelter on the road beneath, alike with those great trees which run to flowers, which have no thought where their lovely and oft fragrant blooms fall to earth. The French, too, since taking over the Sovereignty fifty years ago, have this to their credit, that in laying out the streets and roads of the town, hitherto lacking any order, they lined them on either side with trees, thus adding to the harbour. There are some broad fine avenues and ill the day when men for mere tidiness, or to clear the way for wires, shall lay those giants low. It is there where I often stroll and keep my eyes open to learn of things. The very street names talk, each well lettered on a white background. They deal with the Far Past or the Near.

Here is the Rue de Jean d'Arc appropriately leading to the Catholic Cathedral, who have made a Saint of her. And now jumping the centuries, here is the Rue de Queen Pomare IV, the one respectable member of the Sovereigns of Tahiti, who ruled in her own right for fifty years, accepting the inevitable with faithful adherence to her word of honour; it leads from the site of her onetime Palace, no vestige of which remains. Here is the Rue named after her arch-enemy, Du Petit Thouars, called in his Report to his Government by the American Commodore of that day, a rank Bully of a defenceless people. Here are Rues named after his ships or those of his underlings, with which he threatened to blow the little town to pieces unless his demands were granted: the Rue de Zélée, the same name as that of the little gunboat which the Germans shelled and sank at the wharf side in August 1914 and set fire to the hapless town; the Rue de l'Artemise; and others. The broad and handsome Avenue Bruat recalls the first Commandant of the Protectorate, who had no easy time with the Patriots.

As to the Near Past, there is the Rue du Maréchal Foch, whilst his fellow marshal, Joffre, gets a delightful little park to himself, with a bandstand where visiting warships of many nations play to the huge enjoyment of the citizens. Paul Gauguin, <sup>64</sup> the Erratic One, whose grave is in the Marquesas, but who resided in the countryside a few miles from Papeete, gets a Rue. I enjoy the stroll along the Rue des Poilus Tahitiens; it is only right that they should be remembered, who, despite the Treaty with the last Pomare, that they should not be drafted to take part in France's outside quarrels, volunteered — but with no great enthusiasm — for the Great War and did their bit. There is one fine avenue, a half-mile back from the beach today named Cours de la Sacrée Union. It is broad, straight and long, bordered on either side with magnificent trees, which, in places, well nigh meet overhead. Till the Race Course proper was made, this Avenue Fautaua <sup>65</sup> was used for the pony races. Its present day fantastic name commemorates the unity of the French people in 1914–1918.

So much for the roads. Of Statues to the Great, whether of leading Chiefs of old time, of the Pomare Sovereigns, of efficient Governors, there are none. Naturally, there is the War Memorial, well set in

---

<sup>64</sup> [Eugène Henri Paul Gauguin \(1848–1903\)](#)

<sup>65</sup> The previous name for the Cours de la Sacrée Union, since it is near the Fautaua River.

the Avenue Bruat, a pleasing piece of statuary, with a Gallic Rooster surmounting all.<sup>66</sup> There is a small obelisk on the waterfront, one of its base sides inscribed “The First Mixed Battalion of the Pacific”, which at Caumont<sup>67</sup> on October 25, 1918, did itself renown. A light above each of these gleams throughout the night. Prominent further along the Beach, there is a Bust of de Bougainville on a pedestal with railings around it.<sup>68</sup> He was indeed a great navigator, but this Bust leads inevitably to a false impression upon most visitors, who know nothing of the island’s history. They infer from it that he was the first of white men to sight Tahiti. There is no Bust for Wallis (or for Cook), whom

<sup>66</sup> The War Memorial, Papeete, with rooster:

<sup>67</sup> [Vesles-et-Caumont, France](#)

<sup>68</sup> Bust of Bougainville in Parc Bougainville, Papeete. The guns of the *Seeadler* (left) and the *Zélée* (right) are also shown; regarding the *Seeadler*, see *Mopelia* in Part XIII, *Roamings In the Great South Sea*.

every native will tell you was he who led the way. So there are errors all round. I am weary of leading both residents, visitors and natives to the truth.

Back of the Beach lie the shops and the market. Tahitians are not a nation of shopkeepers. Very far from it. The constant attendance on counter and at desk is quite beyond them. Apart from the few French and outside companies' stores, the whole business is in the hands of the Chinese. They swarm and have secured a stranglehold on the shops of Papeete. The French welcomed their coming; now they would fain be free of them, but their going is by no means an easy matter. One cannot help admiring these Chinese shopkeepers. They are tireless; they despise Public Holidays, save their own and the Sabbath day. The white man closes down at 5 p.m.; the Chinese keep open well into the night. Where all their stock goes to is a mystery. The shirt makers and tailors keep half a dozen sewing machines going steadily all day; the boot makers, apart from repairing, turn out enough for an army, when half the population much prefer going barefoot. Cabinet makers turn out the most delicate work. Their grocery shops are full to repletion; their dry goods stores are wonderful to gaze at, with shawls that entrance, but are beyond the purses of most. They run the restaurants, where white man's food, natives' food, Chinaman's food are procurable just as the fancy calls. Papeete would fare ill but for the Chinese.

The market is one of the 'sights' of the town. It is large, airy and ever spotlessly clean. It is the daily gathering place at day break the whole year round of many nationalities, a Babel of voices, a Covent Garden and Southfields<sup>69</sup> rolled into one, where everyone is full of cheer and chat and laughter. Then off all go for morning coffee and for another day, whate'er it brings.

---

<sup>69</sup> [Covent Garden](#) and [Southfields](#), in London, are both known for their markets.

## WHEN WILD WINDS BLOW

The sun was setting in a blaze of glory when the engined trading schooner, the *Teriora*, set out from Papeete's harbour for Raiatea in the Leeward Islands, one hundred miles away. She was lightly ballasted since she sailed for a heavy load of copra (dried coconut) there awaiting shipment, and was due to return in a couple of days. The weather was ideal and a happy party were aboard, the Captain taking his wife along and she, her friends with their children. Once through the Pass, the sails were hoisted to add to her speed and soon she was lost to sight.

Not half the night had passed when the wind rose, the sea following suit. It blew, then harder; terrific gusts raised the waves so that they contemned our Barrier reef, taking it in their stride, and hurling themselves against our low lying banks on the northwestern side of Tahiti, tore yards of it away. Those whose bungalows hug the shoreline had an anxious night. Sand was hurled ashore till the grass afront the dwellings was wholly lost to view and the foundations themselves invaded. The coconut palms which hug the shore — for nearer the sea, the more abundant the palms — fell beneath the blasts, the sea undermining their roots; inland giant trees everywhere came crashing down; no easement came with daylight. All day it blew, all night too, then its fury abated, its strength gradually lessened, slowly it died away, but the sea took longer ere it ceased its tumult, and normal times returned. Men claimed that it was the outer rim of a hurricane; perchance it may have been; I know not of winds' vagaries.

And what of the *Teriora*? That is what is still being asked and remains for aye unanswered. The well found, shapely vessel disappeared, nor left a trace behind. That one hundred miles is a lonely run, no islands on the way to run for safety. Quick work was instituted, lonely islands in all directions visited, if haply those aboard had got ashore. But no. Old salts affirm that she capsized. She had a heavy whaleboat hung on davits at one side, as is the custom in which to make landings when close approach is impossible. Some mighty wave may have careened her half over and swamped the whaleboat, a drag too heavy for her to right herself; another wave sent her clean over and there and then she foundered. It is to be hoped that the agony for that happy picnic party was quickly over, and not prolonged, as would be the case if, braving the elements, the schooner had been driven into that vast lonely sea, which stretches eastward and westward for one thousand miles and more, for she was provisioned with water, food and oil for but a three days' jaunt, and slow death then the only solvent. Unlikely, this, for sails and masts are oft flimsy things in a gale.

Those wild winds had other victims before they had spent their force. The R.C. mission cutter set sail from Nukutavake Atoll (in the 'Dangerous Archipelago') for the Gambier Islands, which lie at the southernmost tip of the Tuamotus, five hundred miles from their home. The Polish priest aboard had a crew of six and a native woman went along. They took their time and called in on islands on the way. It was fine sailing weather. Then as night fell, the wind rose and soon reaching hurricane force, made that night's hours a nightmare. There was nothing to do but sail before those furious gusts and take chance whither the cutter drove. That day seamanship won out, but on the next the mast went and the cutter capsized. Clinging it to it for hours, and the wind lessening at last, the eight unfortunates righted the craft, climbed in and sought to bail it out, but the waves were still high. Now exhausted and chilled to the bone, the priest and one of the crew died, their burial place the sea. The five men and the lone woman at last mastered the waterlogged cutter and set a course, with such means of propulsion as they had, for an island they gauged was nigh and on which the writer in his wanderings

had landed some years previously.<sup>70</sup> Here they dropped anchor and the two strongest men of the party swam ashore, with the last two knives abelt, and sought water. They had two tins of rice aboard that had survived. Water was sought in vain though the Atoll — one of the few uninhabited ones, save at the season of pearl shell diving — was traversed completely around. Returning to where they had landed, they found that the cutter had disappeared. There was still a fresh breeze and evidently the anchor had dragged and the boat had been driven out to sea, those aboard too weakened to resist. The cutter disappeared like the *Teriora*. Six gone out of eight. The two men constructed a raft, no difficulty to these natives with their long knives, strips of bark taking the place of sails, and set out for a neighbouring island, for they knew where they were. They were well on their way when the government boat, the *Tamara*, returning from the Gambiers, sighted them, took them aboard and landed them at Papeete, eight hundred miles from the port for which they had set sail.

#### Addenda — August 1941

Six months had passed since then, when those aboard the power schooner, the *Denise*, returning somewhat out of the usual course from the Gambiers to its home port, Papeete, saw a fire upon the small atoll Paraoa, known to be uninhabited. Curious to know the reason of so isolated a spot having visitors, the schooner was headed for the atoll and drawing nigh, four figures were seen waving welcome. The whaleboat soon reaching the reef, the four were found to be the three men and the woman given up as dead. The breeze had carried them to the spot, their boat striking the reef, still lying there, a hopeless wreck. They were in perfect health, the usual atoll fare at their command, coconut and fish. Ingenuity had supplied their needs, knives from the shellfish, hooks from the underbrush wood, water from the milk of the nuts. The *Denise* bore them home. Great was the rejoicing in Nukutavake when those for whom masses had been said for the repose of their souls were restored to them hale and well, none the worse for their tragic experience.

---

<sup>70</sup> Possibly [Maria](#), which WWB describes in *The Tuamotu Islands II* in Part XIII, *Roamings In the Great South Sea*. He writes “With no water on Maria, few nuts and ships but rarely in sight, a wrecked crew would be here in sorry plight.”

## MULCTING THE STRANGER

Papeete in special and Tahiti in general were hard hit financially when, a few years back, the regular monthly passenger service from Vancouver, B.C., south, and Sydney, N.S.W., north, was discontinued and a freighter service with extremely limited accomodation and irregularity of arrival took its place. Gone were the hectic hours, sometimes days, whilst the crowded steamers were in port, the passengers ashore for a 'real good time'. Money flowed in all directions; bars and garages, shops of French haberdashery and Curios were inundated; Papeete hummed, raking in the dollars and the pounds with delight.

Tourists were not entirely a floating crowd; there were always those who remained for a stay, sometimes of weeks, sometimes for months, renting bungalows at high rates or crowding the few hotels scattered both in Town and Countryside. The vast majority of these were a noisy, blatant lot; appearance counts for nothing; the more bizarre, the better; the quiet white folk of the island the while shocked and ashamed at their half nude fellow men and women, as they walked the streets or autoed hilariously along the one and only Highway. The Government made effort to curtail excess, but it was beyond mere appeal to decency. The Entry fee was raised, so was that of the resident stranger, but the flood continued unabated. There were deportations, not alone of men, but money talks, so that those who swept in the cash turned a blind eye to the grossness, and those who loved quiet had to make the best of things.

Then the blow fell. It had long been rumoured that the steamers, for lack of freight, lost heavily on every run. Now the Shipping Company threw up the sponge. They quit. The decent folk rejoiced, but gloom rested in the shops and bars. Tahitian life, the stream of Tourists dammed, resumed its former placid way; the daily routine had again its charm and normal business sailed its course on an even keel. Only the 'get rich quick' complained.

And now came the news that two large Luxury Liners of another Line, crowded with Tourists only, all on pleasure bent, would arrive at the same time at Papeete, one heading south, the other north. The little Port of Call was thrilled. Here once again would be rich pickings, not for a few hours, but for a full three days' stay. Papeete prepared for the invasion; the shops brought out their store of things long hidden for such a hoped for day; every counter was loaded to its capacity; the bars laid in huge stocks of wines and liquor; and the Chinese merchants led the van. The Government, foreseeing, urged moderation, but Papeete took the bit in its teeth and were out to mulct the Strangers. They arrived, a huge swarm, the Tourists with their crews numbering over two thousand, and more Tourists loaded with cash, which they were quite as determined to squander as Papeete's bars, garages and stores to gather in. Those three days were hectic. Prices rose fabulously. What the Tourists wanted, they got, no questions asked, drink or fabric, local jewelry and pearls, curios of no intrinsic value, perfume till the supply ran out, hats which cost us four francs but sold at forty. Both Town and Countryside was in a whirl; quiet folk stayed closely at Home, the streets and roads unsafe as the wild crowd rushed around. Every auto was called into use, private owners hiring out at a fantastic figure. The bars in special did a rushing, rousing trade; champagne, a gin fizz or a rum punch — whatever they mean, for I know them not — rose 100 to 500 per cent, even a glass of water had its price. The few hours tour of the island rose from its customary one hundred francs to One Thousand.

When the Luxury Liners sailed away, the left of a certainty 100,000 Dollars in Papeete and the island, possibly more for the Chinese are no talkers. Tahiti had mulcted the Stranger to the limit, and withal both sides were well content. Where, before, the wide world over, has such a record been surpassed?

## A TRIO OF FREAKS

One cannot dwell long among the pure bred Tahitians — and there are, still happily, far from a few of them — without noticing some more than strange characteristics, which produce actions not only surprising, but intriguing, to the observer. These actions have come down the centuries and appear likely never to be eradicated. Herewith reference is made to but Parentage, Theft and Anger.

Motherhood and Fatherhood are not as with us. We cling to our bairns; they are ours alone; their upbringing, our charge and duty. Not so with the Tahitians. They pass their children along to others, not only to relatives, but friends, without the slightest compunction or feeling of loss. It is not that they do not care for them, that they are glad to be rid of them, yet the regret at parting that we would expect to see is not there in the smallest degree. Folk drop in to see the new arrival; they express delight at the little bundle of humanity. They may have half a dozen children of their own at home, but “Oh! the darling. Can we have him (her) as our own?” As often as not the answer amounts to “As soon as weaned you can call him (her) yours.” Sometimes the families dwell far apart, off on different islands, but that makes no difference. If close, the fledgling runs in and out of both homes, the heads of each his (her) ‘parents’. He (she) grows up oblivious to any sense of incongruity or of confusion as to whom to look to. Years may pass before children meet their real parents, but there is no lack of love on either side, nor has there been through the oft long years, forgetfulness. You, a white man (woman), are warm friends of a native family. You know the young folk well. You think you know the entire circle, when one day you meet there a young party never seen before and you are told, “This is my son (daughter); he (she) is home from his (her) parents for a little change.” It is the Custom and that’s the end of the matter, but it seems all upside down to us.

A Thief is a thief, in our view, and to be dealt with accordingly, but not so with Tahitians. Thieving is a natural propensity among them and the record is unbroken as far as records go back. The first white residents, in 1800, found it rampant and had a fearsome time because of it. There was a god of Theft — Hiro, his name — in their gallery of gods and his priests were well served by those who sought his blessing on their proposed raid on the possessions of their fellows. There is no Hiro now and the thieves are all Xtians, but their Bible commandment goes by the board. They are thieves and even brazen ones at that — happily not all of them — but one can never be sure, save the very elect. The principle they appear to work upon is that ‘What is thine is mine if I want it’. They purloin aught in house, in grounds, in store room that takes their fancy. Money, once unknown, is an overpowering lure. We white folk suffer, alike with their fellow natives, despite every precaution taken.

As to food, there is no asking; it disappears when your back is turned. You know the thief and he (she) knows you know it, but no accusation or even insinuation is considered proper to be made. Such is the Custom, the invaded home still wide open to him (her), the loss accepted as inevitable and a forlorn hope that no more will be spirited away.

But there is a theft that is unpardonable. Thieve to your heart’s content far and wide, but never from your Family Connections. That is absolutely outside the Pale. Repentance has to go full and deep before a semblance of forgiveness is secured, but the wound is there for a lifetime; it never fully heals.

Tahitian anger is an ephemeral thing. Let not the sun go down upon your wrath is very close to true with these strange folk. Two men (women) will quarrel; high, furious words will pass; insults offered that, with us, would cause a lifelong break; charges made recklessly; passion and hatred have full swing; a ‘get out and keep out’ stand announced as a finale. And yet a few days pass and all is forgotten; they are cronies as of yore, chatting together as the warmest friends who had ever existed.

Such is the Custom. To bear enmity is absolutely against the Code; lasting anger or sense of injury is unthinkable.

A strange people. The ‘simon pure’<sup>71</sup> natives have their freaks of character and action, but none the less, they are winsome and charming to those of us who have broad minds.

A tale when Hiro got the worst of things may fitly end these freaks of character. Before Laws and Orders ruled Tahiti, Henry Nott, the stoutest hearted member of the earliest band of missionaries, had preached one Sabbath Day strongly and sternly on the crime of Theft great and small. The next morn at break of day, Nott opened his door to behold a large concourse of natives sitting afront his dwelling and weird assortment of articles around them. Inquiring the cause, they said that his words of yestermorn had gone home. “When we were pagans, we thought it perfectly right to take property we coveted. Our god used to assist us. But Jehovah says to us Xtians that we must not, and all these things we have here are stolen goods.” Here were chisels and axes, hatchets and saws, knives and tools beyond measure precious in their sight, stolen from ships and the unfortunate missionaries themselves. “Why bring them to me? I do not want them,” said that stolid pastor. “Take them home and return them back to their owners who are ashore, and to the ships on their return.” But of no avail. They protested that they could not take them back to their dwellings and the pastor perforce had to become ‘the receiver of stolen goods’, which he had denounced alike with the thief, till he could return one and all to their owners or their kin. No easy task with those ships infrequent in their calls.

---

<sup>71</sup> *Simon-pure*: of untainted purity or integrity, alluding to a character impersonated by another in the play [A Bold Stroke for a Wife](#) (1718) by Susannah Centlivre.

## THE PRINCE OF TAHITI <sup>72</sup>

His title, according to continental Europe's heraldic laws — not British, in which the title lapses with the third generation from the Sovereign — Ariipaea is a good-natured, unassuming fellow, a cordial smile seems a very part of himself. Though Prince and Head of the Pomare Family, he carries these honours lightly. To many a visitor, he remains unknown, and it was research on the writer's part that brought us together. He seemed uncertain of the full line of his pedigree, which was sought and which, of a truth, is somewhat confusing. It was a pleasure to trace his exact position and make clear to him and his, and his fellow natives, his rights in that tangled skein. It may interest others also, since it gives a view of the family life of Tahitians under French influences and clears the muddle caused to many minds, both Tahitian and outsiders, by the surrendering of the sovereignty to a Foreign Power by the last of the Pomare Kings.

Tahitian names not only make reading difficult to those who know nothing of the language, but carry no special value in themselves, so we will dispense with them. We start with Queen Pomare IV, who reigned from 1827 to 1877, which gives a date for her descendants generally. She had a numerous family. Her eldest son died a young man, without issue. Her second son became heir to the Throne. He was twice married. The issue of his first marriage died young. He had no 'recognized' issue by his second wife. Her third son had as numerous a family as his mother. Her fourth son had issue, but died young. Her fifth son had issue, a son who grew to manhood. That leaves her third and fifth sons alone in the line of descendants.

Her third son's issue was as follows: his eldest daughter died a child; his second daughter and his third daughter had issue; his fourth daughter died in her 'teens; his only son died an infant; his fifth daughter married, but issue died in infancy. That leaves two daughters in line of descendants of Queen Pomare through her third son. Their cousin, the son of her fifth son, was also in line. No one else. Two young women and a boy, all in their 'teens. The young women married early; the second daughter married a Brander; the third daughter married a Salmon; so the only Pomarre left was their cousin.

He was still but a boy when Queen Pomare's second son became King Pomare V, who announced on his ascending the Throne that his successor was to be his eldest living niece, that second daughter of his next brother. But her marriage ran counter to his wishes and he formally and legally 'adopted' as his son and his heir, the boy, the only child of his youngest brother. Then followed the surrendering of his sovereignty to France. His niece was therefore doubly out of the picture; there was no Throne to succeed to, and another had become the heir in place of her.

That nephew till his death was accepted by all — by the French authorities as well as all the natives — as the Prince and head of the Pomare Family and House. He first married his cousin, that fifth daughter named above of the third son of the Queen, but, as noted above, their issue died in infancy, and he had issue by another of high rank, who were not only 'recognized' by him as his own, but made legally so by French law. That issue was an eldest son, a second son and the youngest, a daughter. The daughter married a Cowan and is out of the picture. The eldest son dying without issue, the second son became the heir of his father's position and rights — the Prince and Head today of the Pomare family and House. Such is Ariipaea, who is the last and living son of the 'adopted' son of the King and the direct descendant through his father and grandfather of his great-grandmother, Queen

---

<sup>72</sup> See also *Pomares of Tahiti and Heraldic Law* in the 15 December 1938 edition of the *Pacific Islands Monthly*, pages 38–39, in Part VII, *Articles By and References to WWB in the Pacific Islands Monthly*.

Pomare IV. As he has twelve sons and daughters, the name of 'Pomare' seems likely to last upon Tahiti for many years to come.

The two unmarried daughters of King Pomare's Consort,<sup>73</sup> whom he refused to recognize, bear that name; however, since, under French law, a wife's children, be their fathers who they may, must bear the husband's name till a divorce separates the two. This after the second daughter's birth was granted the King and his Consort's later son bears the name of Salmon, his mother's maiden name.

Ariipaea's father, Prince Hinoi I, had great possessions through his uncle, but he was a free liver, great hearted and generous to a fault. His elder brother, Prince Hinoi II, was no less fond of good living, nor was prince Ariipaea less so in his younger days, if report speaks true. He still has much good property, but the calls of a dozen children are heavy and he works like his fellow Tahitians for his living, without complaint. With seemingly cold and callous indifference to the Past, he is employed by the French authorities as one of the postmen of Papeete!! One fails to understand it.

---

<sup>73</sup> That is, his second wife.

## THE PRINCESSES OF TAHITI

Princesses were extremely and strangely numerous when I first took up residence on Tahiti. They were to be seen parading the streets and the shady waterfront of Papeete, yet none seemed to be in the least interested in such high personages, save the Tourists of those days, or gave them the usual courtesies towards the gentler sex. Naturally I was curious to secure the explanation of so strange an anomaly and of so numerous a Royal Family, seeing that Royalty had long been pushed into the background. I had no desire to listen to gossip among the white folk, but would seek the solution by a careful study of the Past. This took time, for I was a total stranger to that Past and knew not where to put my hand on literature thereon. But perseverance won.

The result was certainly surprising. All but a handful of these Princesses — and those still children, never to be seen — were the grand nieces of the ex and divorced Consort of the last Pomare King. They were, in chief, not even of Pomare blood, but their Grand Aunt having once been a Queen, they were of necessity Princesses. Which is as if our present English Queen, <sup>74</sup> a Bowles-Lyon, brought through her marriage to our King, all her nieces and grand nieces and those yet to be born to the rank and title of Princesses. It transpired that the parents of these so called Princesses had never made the claim. It was their daughters who did so.

One can excuse the native Tahitian for ignorance of the Laws of Heraldry, but the half-castes have all a good and sound education locally, some even going outside to complete it, and the history of kings and queens and their succession, which is part of that course, should have made clear to them the absurdity of their claim, though Heraldry's definite laws might never have been their study.

One tries to find excuses for these Princesses. Maybe the temptations were too overpowering to be resisted. It was something to be a Princess among the local swarm of women folk. They could hold their heads high among their fellows, and Tourists fell to it, especially, one regrets to say, the Americans, who without Titles themselves as a nation seem attracted to Titles elsewhere as moths to a candle. Not all, happily, but many. It was not everyday that one dines and wines with a Princess; nothing was too good for such a divinity; gifts, no matter how costly, were a pleasure to present. Some even were seriously considering marriage, bearing off to their faraway homes a Princess, to the astonishment and fearsome jealousy of their friends.

As to Princes — and there are brothers of these pseudo and exalted maidens — a word is due. They know that the claim is preposterous. They take the line, Tahitian-like, if the women like to fool themselves and others, let them. It usually hurts no one, save the gullible Tourist, and if he is such an ignorant fool as not to be able to see things through (with us as patent evidence of its absurdity), let them pay the price in good American dollars.

Another word is due to others. There are, besides the children of the present day Prince of Tahiti, the two unmarried daughters of that Grand Aunt. They must needs by French law bear the surname of her husband, King Pomare V, though 'unrecognized' by him as his. They bear the Title of Princesses only through French Courtesy, for the Laws of Heraldry lay clearly down that no Title can be passed on by a female unless she be a Sovereign reigning in her own right, as was Victoria, our Queen, and Aimata, Queen Pomare IV. A Consort of a King has no power to do so. It is true that a Sovereign reigning in his or her own right can raise a man or woman to Princely rank, as George V did our

---

<sup>74</sup> [Elizabeth Angela Marguerite Bowes-Lyon \(1900–2002\)](#)

Queen upon her marriage to his son, but Pomare V never did so to the ‘unrecognized’ children of his Queen.

Besides the above named Pseudo Princesses and Courtesy Princesses, there are those of the daughters of the Royal Family of Queen Pomare, who married Commoners. Those daughters were Princesses in their own right, but their daughters fail to carry on the Title, though some of Tahiti’s ‘Princesses’ do that very thing. Our own Princess Royal’s <sup>75</sup> case should convince them of their absurdity, who, marrying a Lascelles, <sup>76</sup> their two sons, <sup>77</sup> though a real and intimate part of our Royal Family, bear no Title of Prince.

Years have passed since my settling down on Tahiti. Some of these pseudo Princesses have relinquished their absurd claim; there are, however, others who still cling tenaciously to a rank they know full well is not theirs. The Tahitian has learned the facts and is silent. There is no harm in such child’s play and a new generation of those Princesses’ children will lay aside for all time such a farce.

The Princesses of Tahiti will ere long be only those fully entitled by birth to the Rank: Ariipaea’s daughters, <sup>78</sup> and this only according to Continental Europe’s heraldic laws, not British, which drops the Title after the second generation from the Sovereign they descend from. <sup>79</sup>

## TOMORROW

Folk not gifted with patience should avoid the islands of the Great South Sea unless they are prepared for a nerve wracking time. Time is of little account to the native mind, both watches and clocks are rarely to be seen amongst them, and hurry is an attitude unknown. To leave things till Tomorrow meets the case appropriately nine times out of ten. The exception is, naturally, Food. Whilst all other things can wait, the native oven is an insistent call. But that matter does not affect us outsiders. It is not the hired labourer who plays fast and loose with Time, but the foot-loose native who one calls upon for some minor need. That need plainly stated, no excuse is offered of other calls upon their time, but you are given calmly the reply, Yes, Tomorrow it shall be done. Argument is useless, so also is it to show an impatient annoyance; the inevitable has to be accepted as final. Things have now reached such a pass with us that we drop the native's name, be it man or woman, and bestow upon the party a new name, viz. 'Tomorrow'. They smile nor feel slighted or insulted.

This weird policy of life reaches further than mere home calls, and probably none is more exasperating to the impatient foreigner than that connected with the sea. A schooner is announced as scheduled to sail 'at 4 pm today'. Warning my friend, whom I would see off, of possibilities, we arrive at Papeete's wharf in good time, where all is bustle and a crowd is gathered to say their farewells to those departing. The hour is drawing near; the first whistle has been given of notice to be off, at times even the second whistle, when word is passed round that the Tahitian Captain announces that the boat will sail at the same hour Tomorrow. Loud imprecations escape the lips of the foreigners; not so with the crowd, who are full well used to it. Quiet reigns again on the wharf. We who are of patient mind hope for the best for our friends.

Once again we are there and await with eager hope for that third and final whistle, but No! Word is again passed from the schooner's side that the Government has an important despatch in the making that must go by this particular schooner on its way amid the islands, and Tomorrow all will be right. My impatient friend goes right off the handle; he is mad, intolerant and I fear the upset to his nervous system. I do my best to soothe him. But he is fortunate if at the third essay some Chinese exporter does not hurry down to inform the Captain that he has had a sudden demand for a large consignment of goods that must go without delay and they will be on the wharf Tomorrow. Freight charges are not to be lightly rejected.

By this time my impatient friend has lost hope. Anyway, he will remain in his quarters till the second whistle has gone. My warning is of no avail; he refuses to be publicly fooled again. The second warning has sounded some good while back as we saunter heedlessly to the wharf. I urge a faster pace, without avail. And lo! the final whistle goes. He quickens pace; in fact he runs, but alas! just too late, in time to see the schooner's hawsers being hauled aboard from the sea. There is no chance even for a jump. She has sailed at last and impatience has met with its reward.

## REBELLION

No! this is not a case of civil war on our fair, peaceful island of Tahiti, yet still is an account of constant war waged between Life and Death. The medical profession has no easy time with the native patient. Though ill informed of the intricacies of medicine, one fact, in long years gone by, was impressed upon my mind, that Diet is inseparably bound up with it. It is, in fact, I believe, more than half the battle with sickness, be it of what type it may. Medicine waits on Diet, not Diet upon medicine. Food can greatly aid or can equally greatly destroy the effect of the physic taken.

Now that is what no native can understand, or seems willing to allow. They will consume any drug, pill or other noxious aid to health the doctors order, but when the all needful Diet is spoken of and ordered, there is Rebellion. Touch the 'tummy' of a native and there is trouble. Sometimes it is open rebellion; more often it is subtle. The doctor worries and wonders why his patient is so slow in recovery or changes so oft from better to worse. The sick one and all around affirm with perfect assurance that orders have been carefully observed, but that poor doctor knows better. He has means unknown to us unlearned folk of learning the sad truth. He has two courses left; either to drop the case and let natives use their own peculiar medicines and their methods, or plod on, handicapped to a degree, past bearing at times, to a cheering cure, but more often to a disaster not his fault, though on him will surely be laid the blame.

Of course, it must be hard and irksome to change the habit of years. To one who knows nothing of sickness, who is free to eat what taste desires, it appears a fearsome sentence for one to be told "This is good for you; that is poison." Salt, for instance, may be pronounced as absolutely forbidden to one, and fish to another; meat must be cut out; coffee or tea you must banish as a refresher. The very fruits of Mother Earth are differentiated, some good, others destructive to health. One's usual diet is cut to pieces; the pleasures of the table vanish; and this often not for a time, but for good and all. Doubtless doctors know best, but it must be and is hard nevertheless. The native rebels, cost him what it may, and he has sympathizers all around his bed to aid and to abet him.

That virulent fever known as typhoid is all too common here and tests, as few other illnesses do, the patient's courage and endurance of small fare. Indeed, there is a period, so I am told, when the patient, having passed the crisis, hungers for food, yet to give it means relapse and even death. It takes courage not only of the patient to endure the lack, but of those around the sick bed. Some of the attendants are firm despite appeals that wring the heart to refuse; there are others who rebel against so drastic and, as they put it, needlessly cruel an order. If not they, then other relatives or friends step in surreptitiously and give the forbidden food. Quickly follows a condition which calls for the medicine man in hot haste. Some die; others learn by added suffering what it costs to rebel. Not even in hospital is the patient safe; there is but one thing for the physician to do, to close the door and set a guard before it. 'Tis a drastic course, but drastic measures are ever needed when rebellion raises its ugly head. Doubtless one's 'tummy' is a tyrant; when it feels a vacancy, it makes the fact known all too clearly for comfort, but the wise patient endures. That tyrant lives for the present moment; its wiser owner looks ahead to the day when once again upon his feet, he can make even that tyrant smile as hunger is abated and all thought of Rebellion becomes but a memory of the painful Past.

## AN OUTSIDER'S WITNESS

*The following Excerpts appeared in an Australian magazine of date August 1939. The article is from the pen of a prominent and roaming correspondent of a U.S.A. newspaper.*

Having returned to Tahiti after eight years, the thing that surprises me most is to find Tahiti, and especially Papeete, so lively and active — far more so than when I was here before, despite the discontinuance of the mail boats. This is, of course, partly due to the fact that the European residents, especially British, and Americans have greatly increased in number. You see new houses, mainly bungalows along the various beaches, and on boat days, Papeete offers you a really fascinating cosmopolitan picture.

The foreign colony is certainly the most extraordinary one of its kind in the world. Its nucleus and foundation is the group of real gentlemen of Tahiti. It is not necessary to mention them specifically, nor would that at all please them. Some have acquired fame and fortune since I was here before, and that is almost as much satisfaction to their friends as it is to them. Others came here, originally possessed of means, which have been worthily used. Others had neither fame nor fortune, but are of the character that is of equal richness.

There is, unfortunately, another group. They were lured here in the main by journalistic liars, who publish far and wide that once in Tahiti, all your problems of whatever nature are immediately solved, that you can live on next to nothing, and at once acquire a companion of the opposite sex who will satisfy every mortal need, from laundering to the most exacting demands for 'romance'.

The scenic and climatic charm is, of course, unaltered. The island peoples are contented, and there is practically no poverty. It is no doubt true that the lovable, kindly-dispositioned Tahitians are easier to deal with than such as the truculent Samoans. But the difference between Papeete, with its blend of almost every European race, natives, half-castes and what-have-you from all over the world, is, in its rarely-marred orderliness and friendly atmosphere, a marked contrast to Apia, with its unpleasant incidents of one kind or another. There is no doubt at all that Tahiti is unique, and as I am more than ever convinced, the best place in the world to live in.

### Another's Witness

*From the "American Mercury". Excerpts. <sup>80</sup>*

The legend of the South Seas has persisted for generations. Almost everyone has been touched by the alluring vision of an island paradise, particularly when modern life becomes most oppressive. It is strange that only the merest handful have realized their dream. But there have been a few.

Some time ago, my wife and I decided that we were not getting as much out of life as we should, so we packed up and followed the sun. We lived for nearly two years on the island of Moorea, twelve miles across the channel from Tahiti. Our home was in a setting of exquisite beauty — green mountains towering at our back, cocoanut palms around the house, and a stretch of white sand and

---

<sup>80</sup> The text below is from *Escape To the South Sea Islands* by Philip Aquila Kempster (1900–1988), which was published on pages 403–410 of the August 1938 edition of *The American Mercury*. The complete article is available online [here](#).

turquoise water in front. The house consisted of one large room, about thirty feet by twenty, built off the ground on stilts. There was a little verandah in front, facing the beach, with overhanging eaves of palm thatch. The walls were plank for three feet, and above that, young bamboo reeds through which sunlight and fresh air filtered constantly.

We partitioned off the place with curtains. From packing cases we built bookcases, shelves, etc. Two beds, a table, a few odd chairs, a gasoline lamp and a second-hand oil stove about completed the furnishings. We lived in what would probably be called a primitive style, but I wonder if you in the big cities are, despite the convenience of your so-called civilization, any happier. In our island home we had just about everything we wanted. They were the happiest two years we have ever known.

The Polynesian natives are a lovable, charming people. Treat them right and they are your friends for life. Their ways may be different from yours but — look around and see which is happier.

You may hear lurid tales of the rainy season. A lot of water falls in December, January and February, but it is not too bad, and there is fine weather between rains. The rest of the year is magnificent.

Life in the islands is simple and satisfying — if you are the right person. If you cannot do without all the little conveniences of the machine age, stay at home. But if you are another sort, you will find in the South Seas a happiness that is pretty hard to put into words, something real and vital that you will never forget as long as you live.

## THE LONE VOYAGER

From my verandah on Papeete's waterfront there could be seen, for months, a small black-hulled sloop at anchor in the still lagoon. It rested on the quiet water — alone — far from the congestion of schooners, launches and cargo ships along the quay. Its name, the *Alain Gerbault*, one man alone its crew and visitors unwelcome. Not that Alain Gerbault <sup>81</sup> himself is morose. Far from it. Ask the natives wherever he has touched in his globe encircling journey of a few years back and in his present roaming in the Great South Sea and they will tell you how this tall, gaunt, but lithe white man of Brittany loves to converse and to romp and play among them. But of his fellow white folk, be they of what nation they may, he will have little or nothing to do. He is 'taboo' to them and their civilization; they are an offense and he has cut himself adrift from life ashore among them for good and all.

He played his part in years not long gone by and with success. Before the first Great War, he was a prominent French lawn tennis star; he served in the Lafayette Squadron as one of its finest air men. But the sea called him and, possessed of the gift of being 'At Home with oneself', be surroundings what they may, which for us who possess it is the antidote of all sense of loneliness, he sailed alone into the Great Oceans — the Great South Sea his aim at present — his sloop his only home. It is not his first great venture. Single-handed, as one of at most a trio who have thus circumnavigated the globe, he had brought his sloop, the *Firecrest*, home to the French port from whence he had sailed to be acclaimed as a hero against his wish, and to his disgust, his very boat's name was seized upon and used for commercial ends.

But the *Firecrest* had reached the end of her career for him. He would have another — with experience added in the building — and it should bear none other than his own. So was it. He is a qualified engineer by profession. This sloop took long in the building. Money was no object, perfection for its purpose was the aim. It is a double-ender, thirty-four feet long and seven tons in weight.

Its sails are rust colored. No motor lends its aid; its owner is an old time sailorman, true to type. It is owing to a privileged visitor that here can be chronicled particulars of what is within that black-hulled sloop. The decks are of teak, the rigging of hemp. All fittings are of bronze and below deck all furnishing and finishing is of mahogany. Forward is the galley, with its 'primus' stoves, amidships is the library with a store of some two hundred books: pilot and navigation books, of course, Polynesian research volumes, books of others' travels and his own books translated into a dozen languages. For this lone voyager is no mean author and his writing desk, aft, beside his bunk, has always something on hand. Woodcuts from Gauguin — that erratic artist another Frenchman who fled his Homeland to make Polynesia his residence and lies buried on the Marquesas — adorn the cabin's walls, and treasures he has gathered on the way are around in plenty. There are spears and idols, bowls and earrings, all stored with care and the sloop throughout is neat and clean from stem to stern.

With such a roamer there gather round him many a fantastic tale, but the lone voyager sails on from isle to isle, unmindful of what the world may say. He has won what he sought in chief — the hearts

of the natives and a name, Terupa, that speaks volumes: the ‘Chieftain who encircles the Lands of Light’.<sup>82</sup>

---

<sup>82</sup> The photograph below shows the grave of Alain Gerbault (1893–1941) in Vaitape, Bora Bora, in November 2014. The text reads: “Alain Gerbault / seuls sur le Firecrest / a fait le tour du monde / 25 avril 1923 – 26 juillet 1929”.

## DARLING, THE NATURE MAN

From *Letters Magazine*, April 1937

Among the many eccentrics who have sought Tahiti as an escape from the woes of civilization, Ernest Darling<sup>83</sup> was one of the most sincere. Twelve years before London's *Cruise of the Snark* (1907–09), Darling had resigned himself to death at his father's house in Portland, Oregon. Over study had caused a breakdown during which he had twice contracted pneumonia. Apparently nothing could save him. His mind was giving way; he had lost faith in doctors and literally couldn't stand the sight medicine.

But one day, in a fit of desperation, Darling escaped from his bed and the house and crawled four miles through the bush. Finding peace in the silent woods, he built a primitive house of leaves and grasses, roofed with bark, spent his days lying naked in the sun on the warm earth, ate only fruits and nuts. His shattered nerves soon strengthened, but after three months, heavy fall rains forced him out of his solitary retreat back to his father's house. There he had a relapse which brought him again close to death.

This time his mind did collapse. He was tried by alienists<sup>84</sup> and found insane, given to a sanatorium, where, his request for a diet of fruits and nuts granted, he soon not only regained his health, but recovered his sanity and was allowed to leave. Seeking a warmer climate and the outdoor life, he bicycled to San Francisco, where he studied a year at Leland Stanford University, wearing as little clothing as the law would allow. San Francisco weather was still too cold for his needs, so he travelled farther south, was several times arrested for insanity because of his strange habits and scant clothing, each time acquitted. Since the California authorities continued to annoy him, he went to Hawaii, but even there was hounded, given the choice of jail or deportation. He left, travelling farther west from civilization and reached Tahiti, where the French authorities let him alone for many years.

He had always embraced socialism and he now peacefully expounded his views to the natives and to visitors who came to see 'the Nature Man', who compiled his own Ten Commandments, written in the phonetic spelling of his own invention. Two of them, "Thou shalt not eet meet," "Visit troppickle cuntriz."

When Jack and Charmian London, who had met him years before in California, arrived in the *Snark*, Darling, wearing only his loincloth and waving his red socialist flag, paddled to meet them in his outrigger canoe. Since the Londons knew and understood the tawny, gold-bearded nature man better than many others with whom he came in contact, *Letters* asked Mrs London for information about Darling's life in Tahiti and thereafter:

---

<sup>83</sup> Ernest Darling (1871–1917) is the subject of Chapter 11, *The Nature Man*, in *The Cruise of the Snark* by Jack London, which was published in the September, 1908 issue of Woman's Home Companion magazine. The article, with photos of Darling, can be found [here](#). Statements that Darling made about his life, which were published on page 7 of the 20 January 1911 edition of Grey River Argus of New Zealand, and page 3 of the 6 June 1911 edition The Mercury of Hobart, can be found [here](#) and [here](#). For an account of his life, see *Pambu* No. 14 (September, 1969); *Pambu* is the monthly newsletter of the Pacific Manuscripts Bureau, Research School of Pacific Studies, Australian National University, Canberra. Darling died of the same [Influenza Pandemic of 1918](#) that struck Samoa, as mentioned in Tale #66, *The Exile's Return*. See also *Darling, the Nature Man* in Part XIV, *Tahitian Vignettes*.

<sup>84</sup> [Alienist](#) is an archaic term for a psychiatrist or psychologist.

Sir,

Ernest Darling had found a way out of sickness and death: to keep his health with a 'Return-to-nature' life kept strictly. If you will remember he had got hold of a tiny holding, a mere bit of shelf on an almost inaccessible mountainside in Tahiti where we climbed one day. He tilled the bit of land and was an asset to the careless community because he improved whatever he laid his hands on. He lived mostly from what he raised, bananas, coconuts and other vegetable products. And, of course, he fished. The French are poor colonizers and did not appreciate him because he was 'queer'. So they made life so hard for him, finally even closing his way to his perch, that he had to leave Tahiti. I should have imagined he was around 38 or 40 at that time (1913). And he lived like the man whom he was supposed to resemble. He was Simple, his mind had been slightly touched, but was Right in everything and lived as nearly a Christian existence as it is possible for one to achieve.

A few years after we knew him in Papeete (1908) he left, practically driven out, and returned to California. He came up here to the Jack London Ranch several times. He had on a few necessary clothes, which he mostly discarded in favour of a loincloth he brought with him; he also brought his chosen food and sat outside the house on some wild grass. Then he faded out of the picture and wandered again into the South Seas region. He finally wound up in the Fiji Group, in Suva, I have heard, the capital. He was ill there and died there.

... He was piteous about the treatment he eventually received in Tahiti, but never censured his tormentors. I enclose two letters from darling... Simple he was, but no fool.

Charmian London

From Darling:

Tahiti, Society Islands [no date]

My dear Jack and Charmian,

I'm xpressing a bx dried bananas prodused and pakt by self on mountain. Let me know in just what kondishun they r on arrival... I'd like 2 make a little bklet 2 sel, out ov that artlikl u rote about me in Tahiti. I mite hav it illustrated with colored plates and sel for 25c thus releevng me sumwhat from pedling bananas around town on bike at 10c a basket. Wood it b alrite with u if I'd make the story in a litl bklet? If so I'l b grately pleased.

Plase gowing well. Pamz waving, 2 greet u again. Much fine froot now and a good man with me. Hope 2 get several naturists up here this yr. Each buys a 3 acre lot and is independent. I've bot about 300 cheep bklets on Socialism 2 sel.

Darling

In a letter to London at his Ranch from Darling, then at Berkeley, California, he explains why he came from Tahiti thither. His great desire was to reach Ernest Haeckel,<sup>85</sup> the famous naturalist and biologist, one of the most scientific men in Germany. He writes, not phonetically:

I couldn't wait to advertise my plantation. A colony-seeking French naturalist was looking for land whereon to locate his Parisian naturist friends. In my 6 months acquaintance with him, I judged him a good man, then gave him my plantation which to me was worth 2000 dollars. He has a solid title.

Note. He was unable to raise sufficient funds to carry him to Europe, so turned him again westward to roam and to die.

## A CHARACTER SKETCH OF A SAVAGE CHIEF

An estimate of the first Pomare by those who knew him. He was the most dominant figure in Tahiti's early history, but, owing to Papara District, was never 'King' as we would understand the title. He died September 3, 1803.

Entry in Journal of the pioneer missionaries, September 10, 1803:

It may perhaps be expected that we give some account of Pomare's character, as far as it came under our cognizance, which we do as follows.

Respecting his family, his father was a Tahitian, but his mother a Raiatean. He was born in the District of Paré, where his corpse now is, and was, by birth, Chief of that District and no other. The notice of the English navigators laid the foundation for his future aggrandisement, and the runaway seamen that from time to time quitted their ships and His Majesty's ship *Bounty*'s crew, which resided here, were the instruments for gaining to Pomare a greater extent of dominion and power than any man ever had before on Tahiti.

We suppose the deceased Chief to have been between fifty and sixty years of age. In person, he was the most respectable man we have seen since living here — tall, stout, well proportioned, grave in countenance, majestic in deportment, and affable in behavior. As to his morals, he was a poor untaught heathen, under the dominion of a reprobate mind and, according to his religion, nothing was sin with him but neglecting praying and sacrificing to his gods. In these things, he was exemplary.

Satan surely never had — and we pray God he may never again have — another like him among these heathens, who supported his (Satan's) interest with his whole power and whose study, from the servile fear of death, was to gain his favour whatever it might cost. The maraes built and the altars reared at his command all over the island are not a few on which hogs and fish were profusely offered, and several hundreds of his subjects he has in his time caused to be murdered and presented as costly sacrifices to the powers of darkness, besides the innumerable canoes, cloths, etc., etc.

As a Governor, if we may judge by the complaints everywhere made, he was oppressive, but it is probable that with the Tahitians' present sentiments of right and wrong, those who have complained would not have been less oppressive. He was a peaceable man and it is generally agreed that the island has enjoyed a far greater degree of tranquility during his reign than it had even while every District was an independent state.

He was an active man. If every subordinate Chief had followed his example in this respect, Tahiti would have exhibited a much more pleasing prospect than it now does. Erecting houses, building canoes and cultivating ground were employments in which Pomare appeared to take great delight and for which he deserves to be well spoken of. It is surprising, all things considered, how he was able to carry on such works as he did, works that an inconsiderate Englishman — accustomed to behold the labours of art of his own country — would look upon with contempt, but which, not understanding, are such as bespeak the greatness and power of a Tahitian Chief beyond any of his predecessors and which will perpetuate his memory to long succeeding times.

Pomare always showed a fondness for foreigners, especially Englishmen, so that he was sure to give encouragement to any seaman that would elope from his vessel, and he often inveigled them himself, but this proceeded from policy. He supposed that every Englishman was expert in the use of firearms, the engine of destruction that carries terror with it all over the island and he hoped so to engage them on his side as to have them at his command, to come and go as he desired.

The characters that he has had to deal with, since we have been on the island, have generally been the most abandoned and they have disappointed his hopes and expectations. But had it been otherwise, the Chief was not a grateful man; he could forget the services of those who had obliged him and take no further notice of them.

His behaviour towards us has always been friendly, which without doubt was regulated in a very great measure, if not solely, by the pecuniary advantages he has derived from our residence on the island. The vast acquisition of wealth that he gained at our first coming, and at different periods since, served to bind him to us. But latterly he did not, we think, behave as well to us as he did before the arrival of the *Royal Admiral*. Perhaps the great and unexpected calls that he has had upon his attention, by the confused state of his own affairs and the frequent arrival of vessels, may be some reasons for this change. We have also, many months past, been enabled to open our commission and have given him and his countrymen to know the true reason why we quitted our relatives and friends to come and live with them. We are certain that the Chief could be no friend to us on account of our religion and that he ridiculed our preaching and counted it foolishness. We have heard that he did so.

Upon the whole, as the Tahitians conceive Pomare to be the greatest King they ever had, so we believe that he has not left his equal on the island.

Entry dated September 3, 1803 — The manner of his death

He was paddling with two others in a single canoe towards the *Dart* and was not far from her when a sudden pain seized him in the back, which occasioned him to cry out and to catch himself up and put one of his hands behind him to the place where he felt the pain. This he had no sooner done than he fell forwards with his face towards the bottom of the canoe and his hands over the sides, dropped the paddle out of his hand and never spoke more.

Note.

The Pomares of New Zealand derive their family name from the celebrated N.Z. Chief Whitoi, <sup>86</sup> whose 'pa' was at the junction of the Waikare and Kawakawa rivers. He assumed the secondary name after hearing accounts of 'King' Pomare of Tahiti. <sup>87</sup>

<sup>87</sup> In 1920, WWB was offered the job of teacher on Niue by Sir Maui Pomare, then New Zealand Minister in charge of the Cook Islands. See *The Good Work of Late W. W. Bolton* in Part VII, *Articles By and References To WWB in the Pacific Islands Monthly*.

## TAHITI'S HEART

The highway round the island for the most part hugs the shore. It has to. The mountains run so close down to the sea that there is only a narrow strip of flat land between the two. On the eastern side, in some portions, there is none at all and the road, perforce narrow here, hugs the cliff, with an ugly drop to the reef below if accident befall. In the days when the natives numbered many thousands, the humbler folk had to make their homes up the valleys and on the sides of the mountains, the Great Ones monopolizing the shoreline. But those valleys are often broad and beautiful, each one with its river hurtling to the sea, and the mountainsides gave both room and welcome shade, so all were content.

Inland Tahiti is deserted now, save of necessity, maybe to cross the island, to gather the wild fruits for home or market, or hunt the wild pig and cattle which have strayed from the haunts of man. But to some, the writer among them, that tangled mass and maze of mountains makes strong appeal and truly it is well worth knowing.

Long years back — Can it really be Fifty! — it was my happy experience to traverse another isle from end to end, Vancouver Island off the coast of British Columbia, clear and skeer down its heart from Cape Commerell, its most northern tip, to Victoria, its most southern, taking everything in my stride.<sup>88</sup> When mountains barred the way, they were climbed straight up and down; when lakes stopped 'footing' it, a raft of saplings, with stout straight branches for sweeps, bore me on their waters to their end.

As I have roamed inland Tahiti, that other isle has forced itself upon my mind; there is so much alike in them and yet there are many striking differences. The islands are alike in that they have no real backbone. Nature had cast her mountains higgledy-piggledy all over the land, the valleys one tires of counting, each covered with rich verdure and each with its cooling but oft rushing stream. And further, both are covered heavily with timber; there are few wide open spaces to be found, save where man has been at work with axe and plough.

But there to the north, the woods are ever resonant with birds' songs, their chattering and their twitter, whilst in Tahiti's heart, all is silent; bird life is conspicuous by its absence.

There a chain of lovely lakes dot the isle from end to end, ten, twenty, even thirty miles in length, whilst here there is but one, a lovely sheet indeed, hidden amid precipitous mountains, each contributing to its waters by waterfalls large and small, its length but half a mile, but ever icy cold, as I and unnumbered others know full well who have plunged in and swam it.

Up there wildlife is abundant; I met the lordly wapiti not singly, but in bands; the black bear who always treed himself at once for safety; the stealthy cougar and the wolf; whilst every sheet of water was the home of ducks and loons. Ahead of me, the fleet-footed quail ran for cover, but the ptarmigan, white of plumage as the snow they dwelt in, greeted me unafraid on the snow-capped mountain tops. Here, naught but straying intruders fleeing from the hands of man.

But the balance is not always to the northern island. There Vancouver Island's Heart was unknown to its natives. To them it was — maybe still is — their ghost land. There they had never dared to wander, nor could money persuade them to join me. Its wild beauty had no attraction for them. The venturesome white man might go, but the seashore was enough for them.

---

<sup>88</sup> See Part XV, *Exploring Vancouver Island*.

Here, however, even to the fastnesses, men, women and children have lived and thrived. You can hardly get away from their stone house platforms and their maraes — local shrines for their gods and their worship. Life was abundant in Tahiti's Heart. And methinks that those wild hills and valleys may well also have been veritable 'Cities of Refuge' when a ruthless Chief or an avenger's hand was after their blood. There are caves to be met with, carved out by the waters or 'quakes of past days, serving the hunted ones of nights even as they have served me, though the wild hog finds them a ready-made and welcome sty, which is not always to one's liking, but roaming inland Tahiti, one must be prepared to rough it.

Tahiti is called, and rightly so, the Garden and Bower of the Pacific. If one would see the full beauty of the isle, leave auto, road and trail behind you; climb to its mountain summits and look around you. You will have won your way into Tahiti's Heart and will have rich reward.<sup>89</sup>

## THE PROVINCE EXPLORING EXPEDITION OF 1894

### VANCOUVER ISLAND BY LAND AND WATER

---

An Exploration undertaken by the Province Publishing  
Company During the Months of July and August, 1894

---

*The Province, August 25, 1894:*

A letter was received by us on Wednesday, via Alert Bay, <sup>2</sup> from the Rev. W.W. Bolton, commander of The Province Exploring Expedition, dated Woss Lake, August 11. The following is an extract from Mr. Bolton's letter: "The country, though magnificent, is simply terrific and the weather has all along been against us, not four fine days since we started. It has taken us one month's hard going to get from Cape Commerell <sup>3</sup> to Woss Lake, and we had to tramp over 190 miles in order to make the 70 which is the actual distance between the two places. You can gather, as can the public, what the next hundred miles on the map can mean. We have not yet been at fault or had to retrace our steps, though maps have tried their utmost to entrap us. There has, so far, been no sickness in the camp. Game is not abundant in these parts as feed is scarce, but we have seen great bands of elk and have shot for meat. Bear also it has been our pleasure to meet and overcome. Birds are few and far between, as ducks are still north in the breeding grounds. We fear there are many failures amongst the photos we have taken as the weather has been so bad. I wish that Victorians and the whole province generally knew the real loveliness and grandeur of this island, which it is their privilege to call their own."

So far, so good. It is very gratifying to receive such satisfactory accounts of the Expedition and to know that though it has as yet accomplished but a small portion of the arduous task undertaken, it has not, in spite of the formidable obstacles encountered, diverged from the original route mapped out for it; this route will be adhered to till the island is traversed and Victoria reached, "Colonist" notwithstanding. In the above letter Mr. Bolton does not attempt to fix a date for his return, experience having doubtless shown that it is hard to get ahead of time in the mountains. There is no reason, however, to anticipate that the original estimate of three months from the time they left Victoria, i.e., July, should be exceeded. The fate of the carrier pigeon still remains shrouded in mystery.

*The Province, September 1, 1894:*

Just as we go to press, we learn that the Province Exploring Expedition has arrived at Alberni. <sup>4</sup> Further particulars will be given next week.

---

<sup>2</sup> [Alert Bay, British Columbia](#), on [Cormorant Island](#), was named after the [HMS Alert](#).

<sup>3</sup> The northerly extreme of Vancouver Island was named Cape Commerell by [George Henry Richards \(1820–1896\)](#) in 1862, after [John Edmund Commerell \(1829–1901\)](#), but the name Sutil — which was given to it by the Spaniards in 1792 — was restored by the [Geographic Names Board of Canada](#) in 1909.

<sup>4</sup> [Port Alberni](#) was named after [Pedro de Alberni \(1747–1802\)](#).

*The Province, September 8, 1894:*

The Province Exploring Party returned to Victoria safe and sound on Sunday evening, 2<sup>nd</sup> inst., having accomplished as nearly as possible half of the journey mapped out at the start. The remainder was not attempted for the simple reason that the party, on arriving at Woss Lake, found that it was too late in the season to attempt it. With every indication that the country between Woss Lake and Alberni, the next objective point, was of a character similar to that which lay behind him, Mr. Bolton calculated that it could not be explored under a period of three months at the very least. This meant winter travel, with its enormously increased difficulties, for certainly part of the time, for which the party was neither equipped nor prepared. Mr. Bolton therefore determined to postpone exploration of the country between Woss Lake and Alberni, and made for the coast by a new route whence he took canoe to Alberni, from which point he reverted to the original course laid down, thus completing the journey to Victoria. It is our intention to take up the expedition next spring at the point at which it was left off this year. The experience gained will of course be of immense value in the projected trip and if less has been accomplished on this occasion than was anticipated at the start, it is at least satisfactory that the hitherto unknown parts of the island, covering the country between the government surveys and Woss Lake and representing 190 miles of actual and arduous travel, have been thoroughly explored. Speaking briefly and from a typographical point of view, most important errors have been discovered in existing maps of the northern portion of the island. Of these, correction will be made in due course. Many mountains, rivers and lakes, all of which have been duly named by Mr. Bolton, have been added to those already marked. Several hundred photographs and water-colour sketches have been taken, and observations of all descriptions made, the publication of which will doubtless prove of very great interest. We commence this week to publish in serial form Mr. Bolton's account of the expedition.

On Wednesday evening, July 4<sup>th</sup>, 1894, The Province Exploring Expedition Party — consisting of the Rev. W.W. Bolton, commander; J.A. Magee, timber cruiser and guide; T.B. Norgate, <sup>5</sup> artist; Pierre de Loriol, hunter; J. Cartmel, prospector — left Victoria for Shushartie <sup>6</sup> Bay by the C.P.N. Co.'s steamer 'Danube'. <sup>7</sup> To this party were added at a later date J.J. Skinner <sup>8</sup> as cook, and W. Rudge, F. Maloney, <sup>9</sup> J. McCartney and H. Huston as extra packers.

The objects of the expedition may best be gathered from the following extract taken from the agreement made on June 29, 1894, between the Company and the original members of the party:

The Parties of the First Part (The Province Publishing Company) agree to organize and equip, under the Party of the Second Part (Mr. Bolton) an exploratory expedition to be known as 'The Province Exploring Expedition', for the purpose of exploring certain parts of the western interior of Vancouver Island from Cape Commerell to the city of Victoria; the said expedition to start from Victoria not later than the 10<sup>th</sup> day of July next, and to proceed by water to Cape Commerell and thence by foot or inland waters to Victoria aforesaid, the time to be occupied in which is not expected to extend over a period of

<sup>9</sup> Also spelt *Meloney*.

three months; the said route to be varied or abandoned in the discretion of the Party of the Second Part.

On Sunday, the 2<sup>nd</sup> instant, the expedition returned. The results will be best made known from the commander's journal.

### Introductory

By Rev. W.W. Bolton

An ardent admiration for the Island of Vancouver, fed by a prolonged absence therefrom, led me, on my return for a vacation, to endeavour to learn more thoroughly what it holds for man and what, in parts heretofore untrodden, Nature has for so many centuries been storing up in forest, lake and stream. It was therefore in strict keeping with my own resolve that, the request of The Province Publishing Company being made to me, I should attempt for the public what my own private inclination led me to think of as possible and full of rich return. I have made the attempt and now, as I look back upon it, I can but regret that I had not months more of time and suitable weather at my disposal to go forward in my search and revel in the grandeur that promised to continue with me from end to end. I would that all did know the loveliness, even in its loneliness, of the island they are privileged to live on; the woods interminable, the mountains countless and magnificent, many rivers never losing their robe of white; creeks, streams and rivers, never slow of pace but ever rushing at headlong speed down canyons, over rocks and boulders, looking for less restraint, heading for lake or arm or the great Ocean, engulfer of them one and all. But lovely as it is, there should be no pretence that things are otherwise than adverse to a great farming settlement or an endless wealth in first class timber, or plenitude of mineral and game. There is indeed considerable of each, but it is in the lower not the upper half. As the fact has ever been, so still it does remain, that Indians are the white man's guide; they are always in possession near some one or other of what the white man is in search of, and no Indians go into the upper half to make home nor attempt the great ranges over which 'Snowsaddle'<sup>10</sup> reigns as king, nor ply the placid waters of the endless inland lakes which my eyes have seen. The timber is light and, even where of second grade, impossible to handle; the mountains so close that valleys exist only for a torrent to pour down; the peaks all tell the same tale — of hard rock, not mineral; the scanty feed, save in certain patches, keeps away the game. I do not hesitate to say that there is more arable land around Victoria, alone, leaving the Cowichan and Comox valleys out of the calculation, than in all the upper half of the Island. The undergrowth, fed by an almost ceaseless rain, is nearly impenetrable in parts; rocks are flung here, there and everywhere; streams which meet one on every side have brought down from the mountains stones that form for miles a veritable pavement between their ways. Evidence of mineral there is, and it might richly repay some ardent spirits to follow up our lead and prospect carefully, but the evidences are far between. And game there is, but it is not general, being found only in certain locations; deer are scattered about, and a grouse is met with now and again; the rest one must know the lay of the land to find, and this it was my duty to search for and make known. A sportsman not knowing could easily waste a season hunting with scarce a shot. Those who are wise and willing to be told can find in short order all that a true sportsman needs. Despite all this that is adverse, which things Truth demands of me to say, yet for Nature in its wildness, for scenery and health-giving properties, from end to end this fir-clad, sea-girt<sup>11</sup> land is to me still unsurpassable. I trust that many others will follow up what The Province has

<sup>10</sup> Snowsaddle Mountain was probably named in 1862 by [Philip James Hankin \(1836–1923\)](#) of the HMS *Hecate*, who made an exploratory trip across Vancouver Island from the head of Tahsis Inlet via Atluck Lake to the Nimpkish River; the name appeared on the British Admiralty Chart 583, published in 1865.

<sup>11</sup> Surrounded by sea.

recommended, after long years of resting from research on the parts of governments or groups of men, and soon the land be known from end to end, with a map that is worthy of the name. How maps and charts have played dangerous tricks with me, the following pages will give full proof of. Surely if some of those having authority were to issue call and request that everyone who knows aught of the interior should of his kindness bring his knowledge as to location of creek, stream, lake and mountain to one given spot, true lovers of their island home would not be found backward and soon a map would be in the hands of all that would prove as true and helpful to travellers as is the coastline chart of the Admiralty Office. As to future exploration, let my experience count for something when I say that though to walk from end to end is not in the very least impossible, but merely a question of time and season, and a matter that any man of average strength can do. Yet as there is so little certainty of meeting with game for food, full supplies should be sent ahead. Packing and exploring may go together, but packing and hunting certainly do not. If supplies cannot be sent ahead, then I would suggest that men cross from west to east coast, starting up the various sounds and arms, and carrying on their backs food to last them for much shorter trips. It will take years yet before our task is done. It will repay any and all who are engaged in the work. Let only those who can smile at every difficulty and know not the word 'defeat' think of undertaking it. To me it has been a summer's pleasant outing that I should be right glad to go all through again, even though it means aches, weariness and cold and lack of food. I return, however, to my calling in another land, nourishing an ever greater admiration of this wee spot in the western hemisphere, giving gladly to the public any knowledge I have gained, and throwing myself upon their indulgence in that time would not permit me to do much more.

### The Report of the Commander

The following notes were made by the commander as the party made their way around and through the island:

On **Wednesday, July 4<sup>th</sup>**, at 9 p.m., we left Victoria onboard the 'Danube' after bidding farewell to a small but enthusiastic band of friends. It was expected that we would reach Cape Commerell by Friday, where would be begun our overland journey.

**Thursday, July 5<sup>th</sup>** — With break of day we found ourselves alongside the wharves of Vancouver, where for hours we awaited the convenience and pleasure of an election officer, whilst to go ashore, as some wished to do, would have been at their own peril. By 9 a.m. we were off again, a fine run on a glorious day, the Gulf as still as a mill pond. Passing Texada Island,<sup>12</sup> of forbidding aspect, with Mt. Arrowsmith<sup>13</sup> on our left, ever snow-clad and beautiful in its ruggedness, we ran up Baynes Sound,<sup>14</sup> dotted on either side by homesteads and clearings, to heave to at Union,<sup>15</sup> where coal was added to our already heavy freight. By this further delay, night came upon us before we passed Cape Lazo,<sup>16</sup> greatly to our disappointment, as we had looked to see the Seymour Narrows<sup>17</sup> with full advantage. Some of us, however, prolonged the day and in the semi-darkness enjoyed the dash through the rushing whirl of waters. Considering that our duty was to make known the hidden secrets

<sup>12</sup> Named in 1791 by [José María Narváez \(1768–1840\)](#), the commander of the small exploring vessel *Santa Saturnina*, after [Félix Ignacio de Tejada y Suárez de Lara \(ca. 1737–1817\)](#), a Spanish rear-admiral.

<sup>13</sup> Named by Captain Richards in 1853 after [Aaron Arrowsmith \(1750–1823\)](#) and his nephew, [John Arrowsmith \(1790–1873\)](#), noted English cartographers.

<sup>14</sup> Named by Captain Richards in 1859 after [Robert Lambert Baynes \(1796–1869\)](#), commander of the [Pacific Station](#) at Esquimalt from 1857 to 1860.

<sup>15</sup> [Cumberland, British Columbia](#)

<sup>16</sup> [Cape Lazo](#) was named *Punta de Lazo de la Vega* by José María Narváez in 1791.

<sup>17</sup> Named after [George Francis Seymour \(1787–1870\)](#), commander of the Pacific Station from 1844 to 1848.

of the island, it was interesting to recall the fact that at this same passage of the waters it was that Vancouver<sup>18</sup> first learned the land to the west of his stout ships was girt all around by sea, and made the fact patent to the Indian mind. Till then, the Northern Indians held that the narrows led up to the source of a river and rarely, if ever, attempted to pass through them. The Indians south of them, not knowing the straits, held that the only way to the sea was through the Narrows. Vancouver, like the bold man he was, promptly put his knowledge to the test and settled the question for all time to come.

**Friday, July 6<sup>th</sup>** — By 7 a.m. we were at Alert Bay, where are some very interesting totem poles and where a large cannery and successful sawmill are to be found. Around these parts we saw several clearings, the last to be seen for many weeks to come. We had hopes of securing from this place some Indians to assist in packing, as also to take a canoe ahead of us to meet us at the head of the West Arm,<sup>19</sup> but the fishing season doomed us to be left without such aid, from this point at least and at this time. Shushartie Bay was reached by noon, passing without stopping the two picturesque spots of Fort Rupert and Hardy Bay. We had heard much of Shushartie, but found the town not large, consisting as it does of about fifty square yards of clearing, on which stands McGary's<sup>20</sup> house and general store, together with one log building with the high-sounding title, painted on a board, of 'The Hotel of Gary'. Whilst dinner was preparing under the skillful hands of a kloochooman<sup>21</sup> (possessor of a perpetual smile), some of us strolled up the Shushartie River, which empties in two streams into the bay. This river rises in the Lakes of the Mountains close to Shushartie Saddle and is very far from being at unity with itself, for again and again in its short course it parts company, each streamlet following its own sweet will. We soon had a foretaste of what was coming as we pushed our way through luxuriant undergrowth. Returning, we were shown on an island across the Strait the large Hope Island Indian Rancherie,<sup>22</sup> nearby to which lies the wreck of a man-of-war, still to be seen at extra low tides after twenty years of resting beneath the waters that engulfed it. Adding some flour, rice and dried apples to our stores and taking on as additional member of our party, J.J. Skinner, chief cook as well as packer, who was found ready there and then to go, with outfit most modest — the clothes he stood in and a blanket — we hired McGary's large canoe and paddled the eight miles up the coast to our objective point, Cape Commerell. This we reached by 7 p.m., paddling over placid sea with but one large swirl of waters difficult of passage, and passing 'Old Woman' Rock, so-called because of its close resemblance to an ancient Siwashee.<sup>23</sup> We had learned that the Cape was the home in former times of a large tribe of Indians, reported at a thousand and even more, and certainly the site does them credit for their choice. A beautiful bay, full sheltered, with a long sweep of sandy beach facing the east, a peninsula at the end running boldly out, a large mound of earth and rock stands sentinel at its head, looking as if especially and with pains built for a fortress, and such the Indians evidently made of it. Upon the summit still stand the pallisades, bending outwards, made of still timber and of great weight each, that stood off their foes, and which succumbed only to the guns of the English man-of-war, which came up from the south to avenge a white man's death. It requires such a stiff climb and much pushing through the growth of weeds to reach the top. Though its former glory is departed, it is not left wholly deserted, for a miner, J. McCloy, has built a shanty beneath the shadow of the citadel and every winter men camp — where once Indians held high carnival and fought their battles — to wash and gather up the gold that lies hidden on the sandy shore. No one was there when we arrived, but soon we were camped down under shelter, opening the packs and regulating our household effects. As evening wore on, we saw what we were told to expect and found

<sup>19</sup> Holberg Inlet

<sup>20</sup> William McGary

<sup>21</sup> Chinook jargon for *woman, female*.

<sup>22</sup> A [rancherie](#) is a Indian residential area; the term is an adaptation of [ranchería](#), a Californian term for the residential area of a [rancho](#).

<sup>23</sup> [Siwash](#) is Chinook jargon for an Indian, derived from *sauvage*, the French word for *savage* or *wild*.

again and again traces of along the Western coast — the deer coming out of the timber and wandering along the beaches for frolic and lick of salt. The smoke of our campfire was too much for them, however, and they were gone before any of us had a chance to add fresh meat to our larder. Nearby the Cape, within a day's easy paddling, is Cache Creek,<sup>24</sup> where the Indians of Hope Island get many bear, and at Cape Scott<sup>25</sup> in the winter there are veritable multitudes of wild fowl of every kind.

**Saturday, July 7<sup>th</sup>**, opened with torrents of rain, a forerunner of what the weather was to be whilst in the northern end, but it did not keep us from giving closer study to the citadel nor dampen in the least our ardour to commence our homeward tramp. About noon we decided to move down to the Nahwitti River,<sup>26</sup> where, we had been told, a trail had been cut through the dense sal-lal<sup>27</sup> to the 'open' lands above the low coast range and which would set us forward on our line to the West Arm of Quatsino Sound.<sup>28</sup> It is not easy to see the river until one is almost on it, but walking along its banks as best we could, we found it a swift stream of fair size and not without fish, some of which — mountain trout — were caught for supper. Our camp was made close to the mouth, and around, plenty of sign of deer and bear were visible. From Skinner, who had been up to the source of the river, which is one of the 'Lakes of the Mountain', i.e., lakes about Shushartie Saddle, a landmark thereabouts, I learned that some four miles from the sea it passes through a canyon over 200 feet high of precipitous rocks and is all along difficult of ascent through numerous waterfalls.

**Sunday, July 8<sup>th</sup>** — With daybreak we were around camp making ready for a start. As to weather, it still continued wretched, but we considered this no cause for stopping and at 8 a.m. we tied our letter to the carrier post and watched with interest her action as soon as let free from the leader's hands. With the instinct of its kind, we saw the pigeon circle once, twice, over the mouth of the river and then fly straight off in the direction of Victoria. If it never reached its goal, we felt that it would have become the prey of more rapid hawk or eagle, both of which abound in the northern end of the Island. Buckling on our packs, which ran from 45 to 80 pounds, we took the trail, which at once led straight up a mountain, testing our wind and strength of limb. With the brush loaded with rain, we were soon drenched to the skin. We travelled for a few miles in a southwesterly direction, progress being slow with logs to climb and rests to take. Lunch was taken standing in a pouring rain on the edge of what was told us 'open' land and suitable for farming, but is really nothing more than muskeg. It runs for miles on the high ridges, with breaks of timber every now and then. At every step we sank deeply in and progress was little quicker than in the brush. Lunch over, we followed a southerly course till 5 p.m., when I made camp, thinking it wise to go easy at first, breaking ourselves in to the packing and clambering. It was a lovely spot down by one of the tributaries of the Nahwitti, clear of undergrowth and timber not too close. It took us all the evening to dry clothes and stuff, for the rain had been pitiless and had reached everything — save the matches, which were carefully ensconced in tin — despite the most careful packing and outer coverings. We were this day, and for several succeeding ones, in a part of the northern end that had been surveyed, a fact which rendered us much valuable assistance and greatly lessened our duty of exploration. Our course on this day was, starting on Sec. 20, we passed to Sec. 17, then intersected the line between 17 and 18 near quarter post, then down the line, blazed only, to the corner of Sections 5, 6, 7, and 8. On the outlook for game, we saw nothing, nor life of any sort. Our artist being unable to practise his varied accomplishments during the day,

---

<sup>24</sup> Stranby River, named after a coastal village in Denmark.

<sup>25</sup> Cape Scott was named after [David Scott \(1746–1805\)](#), a Scottish merchant and director of the [East India Company](#), who had backed a fur trading voyage to the cape.

<sup>26</sup> Originally, the name Nahwitti was a native place name for Cape Sutil (formerly Cape Commerell) and the name of a Kwakiutl chief; however, by the mid-1800s, Nahwitti was used to describe the three tribes and their village.

<sup>27</sup> [Salal \(\*Gaultheria shallon\*\)](#)

<sup>28</sup> [Quatsino](#) is an adaption of the word *Koskimo*, the name of the tribe of Indians living there; on the Admiralty chart of 1849 it was named *Quatsinough Harbour*.

turned his fingers to some very fine needlework round the campfire. Buttons had given way, rents had been made, clothes needed tightening up generally and neither thread nor string was spared. At 9:30 p.m. I turned in, it still being light enough for me to write inside the tent, though we were in the timber. A straight course from the Cape to Quatsino Sound is sixteen miles; we made but two for all our travelling, having in the doing to cover slightly over four.

**Monday, July 9<sup>th</sup>** — Broke camp at 8 a.m., and till 5 p.m. travelled forward through the same ‘open’ country, almost mireing in the bogs from time to time. It rained with relentless perseverance all the day. Climbing all morning, by noon we gained, through a short and most opportune break in the clouds, a splendid view of the seashore we had left, with the Scott Islands in the far distance. We came across sign of both bear and deer, but not till we neared the end of our day did we see a living thing. Suddenly, across a gentle ravine to our left, we sighted two black bear, and eager already for fresh meat, every pack, which to the novice seemed to weigh before at least 200 lbs, was cast off from shoulders as if but feathers, and two of us made haste to head off bruin. But bruin would not ‘materialize’ despite careful and prolonged search along the valley. The location being a good one, we here made camp and soon had the fire going and supper taken, flavoured by good spirits. On what we termed ‘Skinner’s Meadows’ — owing to his glowing eulogy of the large tract of ‘open’ country, but which none other could enthuse over — there is scattered about an immense amount of jack pine and hemlock, with yellow cedar, but all of specially stunted growth. Our course was as follows: Travelling in a southwest course, we crossed Secs. 6 and 31, intersecting township line at corner to Secs. 25, 30, 31 and 36, thence south along section line to quarter post, between Secs. 13 and 18. We made six good miles with but slight detours, so were halfway to the Sound.

**Tuesday, July 10<sup>th</sup>** — With break of day, three of the party started off for a small lake seen the previous evening by one of us, and not far from camp. They were rewarded by shooting three geese. Lorient acted as retriever, performing his morning tub at the same time as bringing the game to land. Their advent home was hailed with delight. Breakfast over, we started afresh, traversing under less moist conditions the same swamp lands till lunch, after which we entered timber land, very wild and picturesque, with no heavy undergrowth. We shot a grouse on the way, so that our larder was full for the evening meal. Though we had neither morass nor sal-lal to contend with, yet rotten timber and steep climb, with streams to cross and waterfalls to get round or over on slippery logs, made the going somewhat hard for the ‘new’ hands, and we camped after making four miles, soon after 5 p.m., thoroughly tired out. We had cut down the 16 miles by 12, and had made detours of but 2 miles in doing so, owing to Magee’s cool and accurate workmanship. Travelling in a S.E. direction, we crossed Sec. 7, Township 33, also Sec. 6, thence south across Sec. 31. We had another beautiful spot into which we came with almost reckless speed, despite danger of broken limbs, and every now and then an unpremeditated toboggan slide, with a rocky surface to glide over, or thereby to come to utter grief.

**Wednesday, July 11<sup>th</sup>** — Bending our backs to our burden, which day by day was lessening, owing to that ever present disease of the woods, consumption (of food), we crossed by 7:30 a.m. the little stream which flowed hard by the tent door and at once started on a climb. This took us through great patches of that most unpleasant of all undergrowths, ‘devil’s club’,<sup>29</sup> with its multitudinous prickly and barbed points, eager ever to hook on and leave lasting impress. Then there were the rotten cedar logs to look out for, which ever and anon, when depended on for support, would crumble away and send man and pack into indescribable confusion and predicament. Gaining at last the mountain height, we kept it despite all obstacles till lunch and a little after, then abruptly came out of the timber to find ourselves upon the edge of a steep ravine. Beneath we saw a rapid stream of considerable width and

---

<sup>29</sup> [Devil’s club \(Oplopanax horridus\)](#)

though to go down to it took us out of our course, I felt at once that we should make the descent to learn what this strange river meant and contained. We reached it on the slide, some members of the party thinking it wise to send their packs ahead of them, but so injurious was this to the packs and the comfort for the rest of the day for the packer that the frivolity was never again indulged in. Cooler heads were fortunately carrying the food and valuables. Descending to the bed of the river, we found it well worthy of the name. At the spot we first touched it there was a good gravel beach and our prospector at once got to work, but without results, as also along the banks and among the rocks sign of hidden wealth was sought for, but not found. We felt sure that it flowed out at the head of the Arm, but where it came from, we were at first not quite so clear about. We made a good attempt to follow the stream down to salt water, but it quickly entered a series of canyons, which drove us up again and caused us to re-enact the unhappy scenes and startling episodes of the morning. Slowly but surely, we reached the summit, anxious to get a view of what course the river took, whether it would be the quickest route or throw us too far west. But timber shut us out. This was but a passing difficulty, soon made to vanish, for Loriol, with sailor-like agility, swarmed a good-sized tree and reported from his lofty perch that two valleys lay before us, and that the one lying to the S.S.E., which did not contain the unknown river, was the best by which to reach the ‘chuck’.<sup>30</sup> We were eager to get through, but knowing well that it was impossible to finish before darkness set in, I thought it wiser to defer the event till tomorrow, and dropping down, in more senses than one, we made camp in a very limited amount of space, having covered five miles during the day, which meant that we were two miles nearer the Sound than in the morning. Practically, we were walking where no ‘lines’ had been run and, consequently, the surveyors had missed the river, for no river appeared upon the tracing we had been kindly supplied with of their work. We were agreeably disappointed at finding the hills not so terrible and impassable as we had been told when leaving Victoria. We passed through Sec. 32, Township 32, also Secs. 20 and 19, and camped in Sec. 24, Township 37. All through the day, we saw signs of deer and bear. There are large patches of ‘skunk cabbage’<sup>31</sup> in this country and the feed is fairly general. Elk were said by some on the east coast to be in this district, but no sign was come across. More probably they run between Cache Creek, Cape Scott and San Josef Bay.<sup>32</sup> We saw no timber of any great size, nor was the growth of fern very luxuriant. Very few flowers are to be met with between the Cape and the Sound. In marshy places, however, we found one specially plentiful and pretty, the size of a primrose, but purest white with sometimes black and sometimes yellow centre. There seemed to me to be an extraordinary lack of insect life. As to ‘Skinner’s Meadows’ and the possibility of turning them into grazing or general farming land, concerning which grave differences of opinion exist amongst those who have seen them, I would suggest that the government send an expert to report on them. Neither surveyors nor men like ourselves are always authorities on farming land, and if the meadows be really arable, then a very large tract is at the government’s disposal and settlers can be invited with perfect confidence. A way in will be somewhat difficult, especially from the northern coast of the West Arm, but if good land — and I should indeed be glad to hear an expert farmer say so — it would be well worth a great deal of expenditure to throw it open for settlement and so break up the desolateness of the northern end.

**Thursday, July 12<sup>th</sup>** — Here was the fifth day’s travelling and yet the Sound was not gained, though no effort was spared and we kept steadily at our work. This was the trip that, when in Victoria, we had been led to expect could be run over in a single day. “Only sixteen miles of ‘open’ country; even with good packs you can make it in a single day.” And if this, then what of the rest of the 250 miles, and we starting with the best of the summer going or gone? But one thing we had determined on: to

<sup>30</sup> [Chinook jargon](#) for sea or ocean; also salt chuck and skookumchuck.

<sup>31</sup> [Skunk cabbage \(\*Lysichiton americanus\*\)](#)

<sup>32</sup> Named by [Francisco de Eliza y Reventa \(1759–1825\)](#), commandant of the Spanish post at Friendly Cove, Nootka Island, during 1791–1792.

reach the West Arm this day. It was lovely in the woods, giving evidence at last of real warmth, and a roasting for us on the shore at the head. We were expecting a thicker undergrowth, which is almost universal when one gets near to water, but instead we found things getting easier, so pressed on, taking nature's hard knocks with equanimity, and stopping at the lunch hour for but half the time. One hour more and we struck the West Arm, coming out exactly at its head, the first stage of our journey being a thing accomplished. We camped at 2:30 p.m., having had to cover but three miles. The 16 miles from the Cape had taken us over 22 miles of country, and it was considered by us to be fortunate that the detouring was so slight. We came out of the timber at the very best spot that we could have, for at any other we would have either had to cross streams or clamber down steep hillsides. The river which we had seen the previous day came out, as we had thought, at the head of the Sound, making a tremendous sweep from where we touched it. The Admiralty charts give two streams entering the Arm. I found one to be this broad and rapid river, known to the Indians as the Wayhowaykah or Rapid Waters;<sup>33</sup> the other, which is but a creek, known as the Makee Mallesh. From the former's course, I should say with some degree of certainty that it must have its rise in Round Lake, shown on survey of northern end as being Township 25, and flows westerly through Townships 32 and 37, reaching the Sound by a journey first south, then east, then northeast. Our own course this day was all in a southeast direction, crossing Secs. 13, 7 and 8 of Township 37. We found it fairly 'roasting hot' outside for some time. The head of the Arm is a wide grassland cut up by the tide and the waters that come down from the mountains at the back. We selected a camp in a grove of trees close to the Wayhowaykah River, then began to search for lumber for a raft to take us down the Sound. For supper we had duck, shooting the birds from the river bank, and Lorient and Norgate acting as efficient retrievers. Perceiving that we had been skirting for the last day and a half a mountain range — the first touched as we made our way down to Victoria, those that skirt the sea coast by Capes Commerell and Scott being really nothing but hills — I named it the 'Premier' range, which is a pleasing title to bestow, both because it conveys a truth and at the same time a loyalty of the party to the reigning government in the person of its chief. But politics had soon to be eschewed, for I found so wide a divergence of opinion prevalent and so many nationalities represented that the political horizon became befogged, and we were fast becoming bankrupt by anticipation as we wagered our all for our country and our side.

**Friday, July 13<sup>th</sup>** — We searched in vain for a canoe which we thought it just possible that some Indian might have stowed away for some future use. We also kept a close look out for Siwashes, but none appeared. The day was exceedingly warm, but we turned out early and went to work building the first of our rafts, this one to bear us down to Coal Harbour,<sup>34</sup> where on the map a store was marked, and where we hoped to obtain a canoe. Had we been able as we thought to do, viz., send Indians from Alert Bay to meet us at the head of the Arm with canoes, we should have saved much time, but such arrangement could not be. The Indians at this season of the year all go to the canneries, none but the old ones and enfeebled are left behind, and though there are some thirteen villages or rancheries on the east and west coast, and adjacent islands from Cape Commerell down to the Seymour Narrows, which when all are at home contain some 1500 Indians, yet we found but a handful and most of those unwilling to work even if able. So a raft we built measuring 20 ft. by 8 ft., for to take six men and their outfit over waters of which we had no accurate knowledge demanded a commodious vessel. Not a nail nor rope was used. All the timber was dovetailed together. Not an instrument required in the building but an axe. Two large logs selected, cross pieces were let in and firmly wedged, then three more logs were set loosely between the firm outsiders and the transport ship was done. The rowlocks were two young trees with forks in them, which likewise was dovetailed and wedged at the sides. Whilst four were thus engaged all morning under a blazing sun, two others

---

<sup>33</sup> Goodspeed River

<sup>34</sup> It was named Stephens Bay in 1927, but the original name of Coal Harbour was restored in 1947.

went hunting, but found no game. The artist, however, thirsting for slaughter and determined to bring meat to camp, laid his pencil aside toward sundown and going forth to conquer, attacked and slew an eagle with number 4 from a 20 bore gun. Its wings from tip to tip measured 7 ft. 3 in. Some were already hungry enough for fresh meat to consume it, fried, and pronounced it passable, but none save its victor enthused over the pottage, the American of the party indeed considering it a gross indignity to his country. The tide now coming in and the weather cooling, we crossed over on a tree thrown across from our little grove, now become an island, and set to work floating our ark and setting extra logs. We had found all along difficulty in getting proper timber, as the Indians had been ahead of us and taken or cut up the best. Loriot and Cartmel rode logs like old-timers, though before they were through they were standing up to their armpits in the water. The timbers secured and a flooring of loose wood laid without regard to pattern or stability, the commander started for camp ahead of the rest to rebuild the fire, the light now growing dim and the night air chilly.

Walking as he thought upon terra firma, he fell of a sudden into a water trap caused by the tide and went in not by halves, but wholly, completely, gun in one hand, firewood in the other. A long drawn “ough” vibrated o’er the hills around. The firewood was lost, but the gun was saved. Two others rowed the raft round from the seashore up the river for a while and moored her at the island, so keeping dry-shod, but all the rest fared a different fate. Their last difficulty was their worst. The fallen tree was now found floating; Cartmel rode it, but alas! when just halfway, it rolled over and he likewise took a bath. Wet and sorry, he reached land and seizing the end nearest to camp, held bravely on whilst the others crossed upon it, but none scatheless. The condition we all arrived in was deplorable and the air ‘blue’ for a time, but an extra supper and big fire soon made amends.

**Saturday, July 14<sup>th</sup>** — Finishing touches having been put to our ark, which, after its designer and builder, we named ‘Maggie Mac’, and the long sweeps made useful, but not things of beauty, we waited patiently for the turning of the tide. At noon we cast off the stern line, drew in the gang plank and, pushing off, soon reached the deep water. Here we found a good stiff breeze blowing fair, and this we shortly utilized to great advantage by rigging up the fly we had with us. When the wind dropped, we again took to the sweeps, two and two in half-hour turns, and made such excellent progress that by 7 p.m. we had run over 13 miles. We were very well pleased with the raft, which throughout behaved in exemplary manner. Coal Harbour was our objective point, but the tide turning, we were forced to make port opposite the ‘Five Sisters’ or ‘Straggling Islands’, making camp close to the water’s edge, but just inside the timber. Here we found a most lovely bower, the gem of all our sixty camping grounds — ferns growing luxuriantly, deep moss for a carpet, and silver beech throwing their arms, all interlaced, far and wide over our heads. The West Arm is worth a long journey to see. High mountains on either side, dense timber to the water’s edge, a creek running in through a valley here and there, small islands dotting the broad sheet of water, long stretches of sandy beach on the north side, and in the far distance to the south, ‘Twin Peaks’ and ‘Snowsaddle’ looming up, both tipped with snow. Between us and the east coast, nothing but mountains, but a much larger strip of country to the west, where lay the Ta-Nass valley, Koprino and Winter Harbour.<sup>35</sup> We passed no stream of any size worth throwing ourselves off our course to explore. We trolled as we came down, but caught nothing, nor were there any ducks to be seen save Siwash, which are uneatable by the white man. We paid a price for our bower, for the mosquitos kept us exceedingly busy, and escaping from them by leaving the timber for the beach, the sandflies gave us in full measure knowledge of their presence. Snipe were fairly numerous, but not approachable. Sign of deer and bear was seen, and of the latter, I have been told by an Indian that around the shores of the West Arm, they are entrapped in plenty.

---

<sup>35</sup> [Winter Harbour](#) was also known as Queenstown and Leeson Harbour; the original name, Winter Harbour, was [restored in January 1947](#).

**Sunday, July 15<sup>th</sup>** — Despite all our care, the morning beheld our ark both high and dry, and we had a great task getting it back into the water. The tide threw us late in starting and until it was at the flood, we found it hard work pushing ahead. Then a breeze springing up in our favour, we hoisted our sail together with a second one in the shape of the artist's blanket and made fine way to Coal Harbour. The seas washed our decks again and again, and made things lively for us keeping our packs out of danger. About 5 p.m. we sighted, by the aid of the chart, the haven where we would be, though some of the crew were ready to wager heavily that the navigating lieutenant was wrong. The matter was soon settled, for turning a point of land into a long and pretty bay, we saw three shacks as signs of man's ownership and residence. We had hoped to see William Hunt,<sup>36</sup> who has charge of the place for the company interested in the coal which crops up so plentifully hereabouts, but he was at Fort Rupert, some eight miles off, where his sister runs the former Hudson's Bay store. So there was none to greet us, save the inevitable dog, whose viciousness was only pacified by food supplied him. The three buildings look as if they sadly needed repairs and a touch of paint; one has its roof half gone. The patch of ground nearby, where an attempt has been made at growing potatoes and other vegetables, is overrun with weeds both strong and high. The dwelling house was locked and barred, but through the windows could be seen arrangements for a number of men, good sleeping bunks and tables, and plenty of tin and crockery ware. One thing was clearly lacking, and that, a woman's hand. There were plenty of stores, though it is no longer kept up as a shop — tins of many kinds, smoked fish and venison, flour and rice. The third building held a boiler, iron wheelbarrows, and the many other articles needed for working coal beds. We visited one of the shafts where a boring of some 60 ft. had been made, but which was full to the brim with water. Nearby there lies an old and dilapidated scow, which spoke of great hopes not, for the present time at least, fulfilled. The harbour is surrounded with small timber; the hills thereabouts are but slight, but the game must be plentiful of the bear and mink order, by the number of 'dead-falls' and traps of many kinds set all about the place. Looking west and south, a magnificent view of snow-capped mountains is to be seen, 'Snowsaddle' and 'Cathedral Spires'<sup>37</sup> looming up far above all the rest. It was unfortunate that the caretaker was not in residence, for I had planned to secure fresh supplies at this point. We had been able to carry only what would bring us a little beyond the Sound and with what was left, we could not hope to reach Woss Lake, distant about fifty miles. Here were supplies, but a door barred between us and them. Some might have suggested breaking in and repaying at a later time, but it is risky work to do so even amongst one's friends, without grave provocation, and the half-breeds and Indians in the district might have heard of it in an ugly mood and given the whole party much and serious trouble. I further realized that more packers were required, both because of there being so little chance of procuring game, with men crashing through the undergrowth as crash and fight men must, and also, with but three months and the winter ahead of us, we had no time for slow progress.

**Monday, July 16<sup>th</sup>** — After careful consideration of the situation, I decided to divide the party. I, Magee and Skinner making for Quatsino Narrows on our raft to where some five miles from our present harbour another store was marked upon our map, there to get supplies sufficient to carry us three through to Woss Lake, and those supplies would mean all we could carry with an unknown land ahead of us; the rest going over a trail supposed to have been cut from Coal Harbour to Fort Rupert, thence down to Alert Bay, procure sufficient supplies to last to Alberni, and perhaps to home, and also hire packers; the whole party to then go up the Kla-anch<sup>38</sup> and through Nimpkish Lake to the head of Woss Lake, there to await my coming, which I thought would be certainly by August 1<sup>st</sup> and might be earlier. This would allow me time to reach Alberni before the season was too late. But I had many things to learn yet about the Island, as will be seen. We knew of the old trail that starts to Fort

<sup>37</sup> Possibly Mount Wolfenden

<sup>38</sup> Nimpkish River

Rupert from near the head of Rupert Arm, <sup>39</sup> about five miles off, which is constantly used by the Indians, who by it cross from the Sound and the west coast to their brethren on the east shores of the Island, but the three men chose what we all thought the nearer route and started off about midday, carrying only a small quantity of food, thinking to make the Fort in a single day, and leaving the tent with us. Lorient was given command and full instructions of their movements, Norgate to photograph what would prove far more likely beautiful scenery and matter than what we should meet with going through what we saw ahead of us, range on range of mountains, covered with snow or densest timber.

I append here an account of their journey to Woss Lake, written out from notes kept by one of their party. Bidding them farewell, we three waited for the tide and then set out once more on the main to meet with events, which shall follow in due course.

### Mr Pierre de Lorient's Lieutenancy

**Monday, July 16<sup>th</sup>** — Leaving Coal Harbour about noon, we three — Cartmel, Norgate and Lorient — soon struck the trail, heading off in a N.E. direction, that we had heard of as going through to Fort Rupert. The whole countryside seemed covered with dense undergrowth, sal-lal, huckle and salmon-berry <sup>40</sup> brush. The cut pathway unfortunately very soon came to an end, never having been finished, a portion from each end having been cut, and then the work for some reason, either want of funds or Coal Harbour not answering expectations, being abandoned. We had, therefore, to depend upon the compass and hope for the best as to what sort of travelling we should meet. Numerous creeks had to be crossed, and we camped in an open patch some quarter mile long, where mosquitos kept us awake all night, the tent being left with Mr. Bolton. Several very beautiful orchids were seen on the way.

**Tuesday, July 17<sup>th</sup>** — In disgust we broke camp very early and moved forward still in a N.E. direction, over meadow land netted with little streams, thickly covered with marsh grass and jack pine. We then entered timber land, where are some very large cedars. After a steady walk all day, we made camp near survey mile post 31–32–5–7, having picked up a little while previously the quarter mile post.

**Wednesday, July 18<sup>th</sup>** — At breakfast we finished what little bacon and flour we had, and now had no prospect, unless the gun was successful, of better fare than the soup we had with us and some cocoa. We followed the survey line for some distance, then took again our proper course, hoping to reach Fort Rupert the more quickly. This, however, led us into thick undergrowth and some heavy and slow climbing. Then we struck some patches of meadow land, until we reached really open land, in the centre a small lake. Tracks of deer were seen. Sometime after, we saw what appeared to be a light ahead and pressed eagerly forward thinking it to be the sea, but soon came to what was but a large swamp, into which we sank up to our knees, and one of us got in so deep that the other two had to haul him out. Tired out and hungry, we turned into the timber at last, lighted a large fire and, burning the ground around, lay down to rest and, if possible, keep warm.

**Thursday, July 19<sup>th</sup>** — Fort Rupert began to seem a myth. Having struck a stream the previous evening, we followed it until it led off to the south, when we had to turn into the bush and fight our way through sal-lal seven feet high. Again the marsh lands, which, with heavy packs and light food, were hard to get over. Ready to eat anything, we shot a heron at long range, which stuck in a tree, which after much trouble was secured, plucked, cooked and eaten on the spot. This same bird proved our turning point, for to secure it we had to leave our course and one of us going a little further than

---

<sup>39</sup> Rupert Inlet

<sup>40</sup> [Salmonberry \(\*Rubus spectabilis\*\)](#)

where the bird fell, came across the well-beaten trail from the head of Rupert Arm to the Fort. Pressing ahead now, as we were desirous not to be benighted again, we covered about four miles when we saw ahead of us Fort Rupert. On our arrival, we were hospitably received by the Indians, half-breeds and two white men who happened to be there from Haddington Island. We were housed within the Fort itself and showed our entertainers what consumption of food meant. The place is very picturesque and retains its old appearance, the houses built of logs and the old palisades still standing.

**Friday, July 20<sup>th</sup>** — We spent the day around the Fort seeing the sights, arranging the meantime our transport to Alert Bay. Norgate secured sketches and photos. There are interesting totem poles before some of the Indian dwellings. The Siwashes were greatly interested by the kodak.<sup>41</sup> The Hunts,<sup>42</sup> who own and conduct the store, dressed up in full war costume and showed us the skins they had secured from trading. The Indians are still very primitive there, going without much clothing and following their old customs. The women's heads are especially hideous, being pressed out of shape whilst young. The trees about the Fort have boards nailed to them on which are cut names of their deceased chiefs. The two men whom we found on our arrival, Rudge and Maloney, we engaged for the trip to Victoria and to take us to Alert Bay in their boat.

**Saturday, July 21<sup>st</sup>** — Starting for Alert Bay, we soon found the boat leaking abominably, but made Haddington Island, where we put the two men ashore — they to follow after us — whilst we continued our journey. The wind being favourable, we enjoyed a pleasant sail. Arriving, we took us our abode in a cabin we hired, and purchased provisions to last during our stay.

**Sunday, July 22<sup>nd</sup>** — We engaged two more packers, J. McCartney and H. Huston, and with an old trader and provisioner, calculated what supplies would be required to carry the whole party through. There is much interest at Alert Bay, the totems and graves being well worth close inspection.

**Monday, July 23<sup>rd</sup>** — From the storekeeper, Mr. Spencer,<sup>43</sup> a large canoe was obtained, and from an Indian we purchased a smaller one. Then putting in supplies, we crossed over from Alert Bay to the mouth of the Nimpkish River, to where Hammond's<sup>44</sup> ranch lies, whom with his brother-in-law, Mathers, were engaged as experts at poling, to take us up to Woss lake. We camped at the ranch for the night. The river is broad at all times, there being an immense drainage of lakes down it, and at the wet seasons it is a raging torrent almost impossible to make headway against.

**Tuesday, July 24<sup>th</sup>** — Three men in the small canoe, six in the large, we started the ascent and from the very first had rapids to ascend, which meant jumping overboard and pushing and guiding the boats. Sometimes ropes had to be used. For amateurs, it is extremely difficult to keep one's footing on the rocks with the water rushing so fast against you. The longest rapid we ascended was a quarter of a mile long. We camped at the entrance to Nimpkish Lake, which lies almost due north and east. The river is about six miles long and abounds in salmon and trout.

**Wednesday July 25<sup>th</sup>** — We paddled up the lake all day, camping at the head, ready on the morrow to ascend the Kla-anch River. The lake is about sixteen miles long, certainly not more, and three miles broad, appearing much narrower than on our chart. In places it is said to be 80 fathoms deep. It has on the side furthest from salt water, tall mountains, some of which are snow-capped. 'Castle

<sup>44</sup> John Latimer Hammond (1866–1941) married Mary Mathers (1873–1945); she had two brothers, John Mathers (1875–1949) and William Mathers (1879–1898).

Mountain’<sup>45</sup> was first passed, lofty and thickly covered with snow and, when we saw it, enveloped about its peaks with clouds. On the other side are low hills with slightly higher range, the Hankin,<sup>46</sup> behind. Excitement raged high as a black bear was sighted on the bank, but the guns were not handy and it escaped with its life. We lunched on one of the islands that stand about halfway up the lake. The Kla-anch has a custom of moving its course, sometimes emptying in at one point, sometimes at another. The new mouth was to be found about half a mile from the one Hammond knew.

**Thursday, July 26<sup>th</sup>** — We made five miles up the river, the bed of which is different from the Nimpkish, it being pebbly whilst the latter is sharp rock. We found also much less water. The rapids, however, are very swift and the canyons dangerous. We came upon the beautiful marble that we had heard of as lining the shores. It is of varied colour, mixed up with a red and white granite. We rowed and towed; we paddled and we waded, and were not sorry when camp time came.

**Friday, July 27<sup>th</sup>** — Much the same as the day previous. We passed the Gorge, which is a narrow pass with very deep water and a stream running at 20 miles an hour. It requires both nerve and skill to get through. Here boats were unloaded and packed for a quarter mile, then each boat was hauled through by all hands on a tow line, save one to keep it steady in the canoe.

**Saturday, July 28<sup>th</sup>** — Not long after starting, the smaller canoe stuck on a rock and split, quickly filling and making it lively work to get the supplies to shore. Some were afloat, for a 6 ft. rent leaves a canoe in bad shape for rushing waters. Six ribs of yellow cedar were put in, having to be shaped by fire and carefully nailed. Rags filed the cracks. Our fine weather departed at the time of the accident and rain came down in torrents. We soon made camp and rested over Sunday.

**Monday, July 30<sup>th</sup>** — The river narrowed considerably. The rapids, though silent, were very swift. We came across walls of grey clay of excellent quality. The timber was taken up and surveyed into limits. Towards evening we sighted the ‘Forks’, where the Woss River and the Kla-anch meet, and making for it past one stiff and deep rapid, where the tow line had to be used, camped for the night. The member of the party who wears eyeglasses had the misfortune to lose his best pair in the midst of a sharp struggle for supremacy with a long and shallow rapid.

**Tuesday, July 31<sup>st</sup>** — Up Woss River. This was the hardest work, perhaps, of the whole journey, as it appeared to be but one continual rapid. Out of the five miles to the lake, we could not have poled, much less used the paddles, for one mile. The bed is rocky, sharp-edged and piled up, making it difficult for footing. Only one bad timber jamb was found. This was a double-trunked tree, but by a little axe work and the removal of the figurehead of the large canoe, we were able to creep under and advance. We arrived at the entrance to the lake in time to make camp. We had been more or less in the water for six days.

**Wednesday, August 1<sup>st</sup>** — This was the day set by the commander for the two parties to meet, but we did not expect to find the others upon our arrival. We paddled up the lake, which is very beautiful, till by noon we reached the head, which is hook-shaped, making a good place for a camp, sheltered as it is by the grand Rugged Mountain, nearby our camp a glacial stream running into the lake of milky-looking water, intensely cold. We raised our tents and prepared to wait for the commander.

**Thursday, August 2<sup>nd</sup>** — Hammond, Mathers and one of the Packers, Huston, started back to Alert Bay to bring the rest of the supplies up. A deer was shot by one of our party.

---

<sup>45</sup> Mount Karmutzen, the highest mountain on the west side of Nimpkish Lake.

<sup>46</sup> Named after [Phillip James Hankin \(b. 1836\)](#).

**Friday, August 3<sup>rd</sup> to Friday, August 10<sup>th</sup>** — Spent the time as best we could, climbing, hunting and sketching, the weather breaking towards the end and heavy rain setting in. During the afternoon of the 10<sup>th</sup>, the commander arrived.

### **The Report of the Commander (continued)**

**Monday, July 16<sup>th</sup>** — With my party now reduced temporarily to three, I waited for the tide and then, going aboard of our good raft, bade farewell to Coal Harbour and its solitary inhabitant, and made our way across the Arm to the Narrows, which lie exactly opposite to Hankin Point, from which spur of land the two Arms, the West and Rupert, run their various courses. Had we not got the Admiralty chart, we should have found great difficulty in making out just where the Narrows lay. Not until we were very near could we detect the break in the land through which the waters rush to the sea. We made good headway until nearing the opening, when we found currents running every way, the waters from both arms being altogether of too great volumes to get through in seemly order, surging back and causing currents that made headway with a raft extremely hard work. The men at the ‘sweeps’ were, however, equal to the emergency. Though for some time we did nothing better than stand still, at last we forged ahead by creeping along the shore. Finally we caught the proper current, which swept us round a bend and into the mouth of the Narrows, when we at once set up our sail, a blanket, and fairly flew through. The pass itself is very picturesque and we saw it to great advantage owing to fine weather. The narrow lane with its rushing waters takes a sharp turn to the west about half the distance, which caused the steersman some anxiety, owing to the ark being somewhat slow in its movements and the rudder being but a whittled tree. I should judge that the distance is well under a mile; low timber is on either side, whilst a deeply timbered mountain stands a little back on the south side like a sentinel keeping guard over the pass. At the east side there was evidently at some time a rancherie, for still the spot is green and levelled off, the spot selected being an admirable one, somewhat raised and commanding the approach on every side. At the west end a fair-sized island, Quatsino Isle,<sup>47</sup> blocks the way, forcing the waters into two channels, and beyond, a much larger island, Hecate or Limestone,<sup>48</sup> covered with heavy timber opposite to the southeast arm.<sup>49</sup> Quatsino Isle was not noticed on the map we had. As we neared the site where we had been told a store stood, we kept close watch, but to no purpose. No store was there, nor had there ever been. It was a rancherie, the winter dwelling of the Koskeemo<sup>50</sup> Indians that we saw. It lies in a cove at the west entrance, and from the very large number of houses, there must be a fairly large band that congregate there when the fishing is done and ‘potlatches’ are in order. We saw no one about, but of course there was the usual Siwash dog. By the look of those poor creatures, it would that they must have a pretty hard time looking after their own and their masters’ interests. An occasional mink or squirrel would be their food. But perhaps they are fishermen as well and do not despise the tasteful clam. We could see no canoe, but death must have been very active during the last season for there were many graves, readily seen by the flags and blankets stuck on poles that stand by the resting place of the departed. Here, too, are totem poles. We were greatly disappointed at finding the second store but a myth, for now there was nothing for it but to run down twelve good miles to Koprino Harbour, where on the map a store was marked as existent and of which we felt pretty well certain. With a canoe this would have been but a small matter, but it meant days of delay with a raft and the tides to be considered. We should have turned into the southeast arm without going out of our course had there been any chance at finding food at the rancheries as we went up, but this was so clearly

---

<sup>47</sup> Quatsino Island

<sup>48</sup> [Drake Island](#)

<sup>49</sup> Neroutsos Inlet

<sup>50</sup> Koskimo

imaginary and we had so little with us that we felt Koprino Harbour it must be. The tide now failing us, we were forced to camp within a half a mile of the Narrows. We had not sufficient time allowed us to find a stream or pleasant resting place, but fortunately we had brought a tin of water with us and this we made use of to cook both our supper and breakfast with, at the same time. Then arranging our couch on an incline, with a good drop for the unaccommodating hip bone, we soon rolled up in our blankets and slept as tired parties should.

**Tuesday, July 17<sup>th</sup>** — Crossing in a morning's stroll a low promontory to our left, we saw the S.E. arm stretching far away, but there was nothing for it but to turn our faces another way, so with slackness of the tide we pulled out and down the Sound past Hecate Island, then past a lonely shack, evidently a resort for fishing parties when driven by stress of weather. Then a good breeze springing up off the land, we ran up a large sail and ran down some miles to an island, Brockton, not marked on our map. Here the wind left us and we had to take to the sweeps, another pull of two hours just across from the haven where we would be, but, unfortunately, the tide would not permit us to arrive at. This was another excellent run for a raft, for we covered a full twelve miles. It took us nine hours, and altogether we enjoyed it so much that we did not attack our small larder from early morn till our day's work was over. Existence on a raft has the sound of romance about it, but in reality, it is extremely practical. To shove it along with heavy sweeps is no joke, and to keep one's legs from becoming paralyzed and yet out of the water requires the most constant attention. A floor that rolls about, and an uncertainty as to which log will hold you, and which will not, increases the difficulty of a promenade till it is safest to remain cramped and stiff. Quatsino Sound is well worth a summer's visit to see, low hills near the water, backed by higher ones with snow-capped crests lying further back. Innumerable inlets shoot off on every side, and the highway is not easy to make out, so twisting and curving runs the main sea. Our day nearing an end by reason of the tide, about 7 p.m. we sighted a clam beach ahead and making for it, pitched our tent close to its edge, exactly opposite to the 'Small Islands'.<sup>51</sup> By reason of the clam bed, together with the crows and ravens which flitted about, we felt we must be near Indians and a canoe, so decided to be up and about early to keep watch on the preserve.

**Wednesday, July 18<sup>th</sup>** — Sure enough, our theory was correct. Up and out of our tent by 4:30 a.m., we saw the tide out and two Siwashes, or rather a Siwash and a kloochman, diligently digging for clams. We were not slow in making their acquaintance, though neither of them could speak Chinook, nor did we long hesitate to follow their example and dig mightily for the toothsome mussel. But our efforts paled into nothingness beside the progress of the woman. She seemed to see right through the sand, and with a shell in her left hand and an iron rod in her right hand, she had the clam up in a trice. We had but stick, but still were rewarded with an excellent breakfast — clams roasted, boiled and raw. When food is very low and supplies are felt to be fairly high, I suggest clams as a pleasant food for travellers along a coastline, but as a rule, they need a 'follower' and this we did not have, save plenty of salmon-berries, which grew up a little stream that empties close to the clam's home. Magee endeavoured to get the Indians to cross over to Koprino Harbour with him, but they put us off, first by saying that they must use the tide for getting clams, then that they must bake them at a little camp they had not far away, then that the tide was too strong for them. So with the tide scarcely in our favour, we floated out raft once more and boarding her, dispensed with our new found but not over-obliging friends. We had learned from them the certainty of a store and the position of the harbour and that 'Ned'<sup>52</sup> was at home. We ran up our sail, Skinner's beautiful white blanket, and an hour's run brought us within sight of the settlement, a fair-sized harbour with a large and a smaller island in

---

<sup>51</sup> Possibly Koskimo Island.

<sup>52</sup> [Edward 'Old Ned' Frigon \(d. ca. 1917\)](#)

it. On the larger, Plumper,<sup>53</sup> stands the store and house and workshop of Ned Frigon, together with some Indians dwelling-places. The smaller was the former citadel, as at Cape Commerell, but now all covered with shrub, a flag-post rising high in the centre. Today a potato patch is to be seen on the banks of the fortress that, before the days of guns and powder, was probably impregnable and could tell still deeds done on it, both great and stirring. The rancherie proper is on the main island and almost directly facing the entrance to the harbour and behind the citadel. Our arrival brought the inhabitants down to greet us, two white men amongst them, both French-Canadians, Ned Frigon being the owner of the store, fur trader, general dealer, packer of salmon bellies and a cooper to boot. For some time before we had touched land, we had been an object of great interest to the residents, opinions being divided as to whether we were a log or a sealing schooner loaded down, and when human beings were seen aboard of the floating log, whatever could bring three men in such a rig? We were received most cordially and all hospitality offered to us. The Indians with their usual curiosity scanned our ark and our possessions and their jabbering was continued for hours. Though taken unawares and after his midday meal, Frigon was equal to the occasion and soon had his table loaded with food for our refreshment. We would not listen to his apologies for plain fare and must have astonished our good host by the width and length of our appetites. Never did bread taste more delightful, nor potatoes nor beans more sumptuous. A pipe discussed, we set out to look around the isle and found that the Indians, after their fashion, had left the reserve across the way and made their home near the white man and his store. He had fought against it as long as he could, but first one then another came and begged the right to build, till all were soon settled down about him. There are not more than thirty Indians at Koprino, the Koskeemo reserve<sup>54</sup> being a large one, probably containing all told some 150. We made the acquaintance of three women — gorgeously painted, but one dying of consumption, with Frigon acting as medical adviser — a few children and four old men, the latter utterly regardless of decency in the matter of clothing, but all seemingly utterly oblivious of the fact. The rest were far off, as everywhere else, to fish at Rivers Inlet. Frigon's stores are replete with delicacies to the Indian mind and travellers such as we. It did not take long to take in our supplies — bacon, flour, beans and rice — all that we three could carry, and just sufficient to carry us through to Woss Lake, allowing for a day or two's delay. We would have taken more had we been able to pack it; as it was, we loaded ourselves down to the fullest extent and trusted to the map and chart being correct as to location and distance, whither we aimed at. Then began the delicate handling for the hire of a canoe to take us up the Sound and so to the head of the S.E. arm. It is always a question of who, the white man or the Siwash, is the best at 'beating down' and neither side ever commences at the price he is prepared to pay, but Frigon came to our side and sent to their shacks for a pow-wow as to what they would do for the strange white men. We had our ark hauled up nearby and gave them to understand that if they did not come to terms, they would lose a job and we would sail away on our good 'Maggie' once more, though none of us at all relished 28 miles more of rafting work. The afternoon and evening we put in resting and learning many interesting things about the place and its surroundings. The main body of the Quatsino Sound Indians have their home at the Narrows, all the other rancheries being but fishing resorts. The band is dying out very fast, consumption playing the same havoc among them as it does everywhere with the Indian where he comes in contact with the white man's food and mode of living. Nothing will keep the young women from paying long visits to Victoria, some to never return, all to be dissatisfied with the surroundings of the rancherie in the North. The only places where Indians can usually be found on the Sound are Queenstown,<sup>55</sup> at the mouth, Koskeemo, at the entrance to the Maad River,<sup>56</sup> Koprino, and Quatsino in the winter. There is a small store at Queenstown, but none else in the Sound, save at Koprino. The latter place is about

<sup>54</sup> Mah-te-nicht Indian Reserve

<sup>55</sup> Winter Harbour

<sup>56</sup> Mahatta River; the name is derived from a Kwakwaka word *melade* meaning *having sockeye salmon*.

five miles distant from Koskeemo and they lie on opposite sides of the Sound. The Ta-Naas or Cedar Park River <sup>57</sup> empties into the harbour, rising near Premier Mountain and running through lowland, where elk are shot in the fall by the Indians. Along the valley of the Maad River, which empties out near Koskeemo, elk are to be found, as some Victorians know from personal experience, and taking Koprino as a centre, there are geese and duck in winter, and at all times, bear, land otter, beaver, racoon, mink and marten, with occasional deer. One Siwash alone brought in, last season, twenty large bear skins. About the middle of August, the salmon commence to run up the streams and they are of a large size in these parts. For three salmon caught the day of our arrival, the sum of 25 cents was paid and the Indian was pleased. As a stamping ground for sportsmen, this seems most excellent, and if it be somewhat difficult to reach Koprino on the west side, there is no great difficulty in going to Fort Rupert, thence following a good trail to the Arm and there taking canoe down through the Narrow's to Frigon's place. I should have much liked to go further down the Sound and see the Island's future Liverpool, but time was pressing and we had an unknown land ahead of us. We learned that Queenstown has town lots for sale, though at present a lone white man <sup>58</sup> holds empire over the place. It is known by those in authority to possess an excellent harbour and being nearer to Japan and China than any other spot on the Pacific coast; it is not unlikely, once a railway touches it, to become an important place. A day full of interest drawing to a close, the question arose where we were to sleep. We had the choice of a store built over the water, with cracks ominous of cold and draught, our tent reared hard by the Indian shacks, redolent of smell, and the use of Frigon's one-roomed abode. Nothing would but that I must sleep in what looked like a huge box nailed on the wall some three feet from the ground, with a hole to get in at. A tempting feather bed overcame all objections that rose to mind, if not to the lips, and with Frigon in another box on the opposite wall, his associate on a pile of biscuit cases, and my two men on the floor, lights were soon out, and we in the land of dreams.

**Thursday, July 19<sup>th</sup>** — An attempt to make the run of 28 miles to the head of the S.E. arm, and a failure was our record of this day. But the failure was through no fault of ours. After the pow-wow of the previous evening, we were deemed by the morning to be proper persons to be taken at the price we offered, and perhaps this conclusion was arrived at quicker by the arrival of a Siwash and his klooch who were going most of the way after cedar bark and who much desired both our company and our coin. As a fact, they would have been better parties, but we could not break faith with the original party, so told them to hurry up and get us on the way. Then came out the Indian nature — the canoe was stranded; the tide was not just right; food had to be got ready; there was all day before them. A long hour was spent waiting for the crew. At length, we ourselves took the canoe to water, the captain of the craft coolly giving us orders to heave her along. Packed into a small canoe were we three, our supplies and bundles; a Siwash, his ancient helpmate doubled up so much (after their fashion of handling themselves from childhood) that when she squatted down, she could not be seen over the side of the canoe; their daughter Nannie, who lays claim to be the Queen of Quatsino Sound (not beautiful by nature and this day made more horrible by being highly daubed with intensest vermilion), her little girl likewise bedizened <sup>59</sup> and such an outfit as put ours to the blush. It would appear that they were going away for a year — pillows and blankets, sleeping mats, pots galore, fish and bannock, pots filled with what we knew not and feared to ask, and a huge pail of water. Bidding farewell to our worthy host, and taking a last fond look at our solid ark, the 'Maggie', which was already being taken possession of by the Indians for firewood, we set out for the main and found a stiffish breeze in our favour and running with the tide. We flew along for full seven miles, the little craft shipping seas, the captain, unmindful of his obligation for himself and family to do the work,

<sup>57</sup> Koprino River

<sup>58</sup> Jobe L. Lesson (d. 1915) arrived in 1894, with his wife Anna and son Ben, and ran the salmon and clam cannery located on the opposite shore.

<sup>59</sup> Dressed or adorned in a showy or gaudy manner

giving us orders ever and anon to bail her out. Then alas! the wind dropped and paddles had to be taken out. We had thought we were to be passengers, but soon found differently. The old woman never so much as touched a paddle; the child occasionally toyed with one; the old man lay back and steered; and Nannie, Queen of Quatsino, was the only one who paddled at all seriously. But even she was from being a worker, for after a few strokes, she would ease off to play with the youngster, add a little paint, eat a little and talk a great deal. Then came another difficulty; the captain would steer us up to the Narrows, whilst we wanted to go up the S.E. arm. He got into high dudgeon when we insisted on going our way and dug our paddles in to keep our head in that direction despite him. We made for the pass by Hecate Island, then a stiff breeze sprang up, but it was a dead head wind and finding paddling hard, the Captain and Nannie the Queen suggested as it would pass away soon, we might put into a cove of Hecate and take lunch. To please them, we did so, and landing, lit our fire, expecting to see them do the same, but the Queen was not at all bashful and as if her right, put her kettle on almost to the total destruction of ours. They squatted on the hot beach; we sought a shady nook. Lunch over, the captain looked exceedingly wise and suggested that as the wind was still strong, we had better run before it back to Koprino, to leave for another day the going further. This move was no good and, with a scowl — and such an one as showed the savage in him — we all again set out. Politeness fails to charm with some. With the utmost courtesy, we had helped the women out and in, and lifted their baggage for them to the beach, but all we got was peals of laughter and a jabbering that monkeys could not beat. The tide by this time was strong against us and after rounding Pender Point, on entering the Arm, the wind was so strong that even we, the crew, agreed to put into another cove <sup>60</sup> after a hard paddle of some five miles. Anchoring in still waters, Nannie informed us that the captain said that there we must wait till the slackness of the tide and the falling of the wind. Hour after hour we waited, till our patience was worn threadbare. The captain, after going ashore to tear off some cedar bark for his dutiful spouse to keep busy with, rolled up his blanket and went to sleep, the little girl the same. The old woman was really and, for the only time, interesting, as she wove her rope. She worked at the bark with teeth and hands, for former acting as both knife and scissors. Deftly she wove the three strands until, in wonderfully quick time, she had made ten yards of strong and beautiful looking rope. Then she awoke her lord, who set to work tightening it all, yard by yard, between his teeth and toes and hauling at it with all his strength. Nannie was loquacious, then opening her treasure box, she produced two musical instruments, which she could not play, but made hideous noises with, then attacked her vermilion box for more paint — a little of which she graciously bestowed upon Skinner's nose as a mark of special favour — then spent a long half hour in looking at her own charming face in a small hand looking-glass. Quiet for a while, I turned to see what she was at, lest she might be sorting our packs, when I beheld her capping the climax as she coolly pared her beautiful toes with Skinner's elegant hunting knife. We were all struck dumb, but fearing the consequences of impeaching a queen, we grinned and bore it. The only excitement was when a mink appeared on the bank. Then all the 'cargo' were at once awake, and I was begged to shoot, which I did not do. The old woman, long after the animal disappeared, making a peculiar sound through her fingers to attract it back, failed to induce a second visit. A little later — we had waited on their pleasure for five hours by now, and deep timber with steep mountains ran down to the water's edge, preventing all chance of spending the time in a more useful way than sitting in the boat — the bushes nearby moved. Nannie said a deer was near; the canoe was loosened from its moorings and we dropped down to the spot. I saw the old man smile at Nannie's eager look; the bushes waved and bent and broke; up went the rifle; forward went every head save one; and out on the beach skipped a couple of lively squirrels. This had given us our chance, and determined not to let the canoe go back to repose without attempting something in the way of progress, we began to move out of the cove into the Arm's broad waters, the cargo loudly protesting and insisting that if any move were made, it should be to run before the wind and sea back to Koprino. Slowly we three moved her out, the captain forced

---

<sup>60</sup> Smith Cove, on the west side of Pender Point.

to steer, but turning out of the sheltered nook, we saw ahead of us dark forbidding clouds of wind and mist, and the whole aspect of affairs was dead against us. The captain smiled, and when we said that though we would have none of Koprino, yet we would go back to the cove's anchorage, he actually laughed. We told them that both they and we would camp for the night there. Then he looked exceedingly mad. It was now 8 p.m. We went ashore to light a fire and cook supper; they sat in the canoe and ate theirs without ceremony. Our packs were in the canoe and my rifle was close at hand, if they dared to put off when we were not aboard. Nothing daunted by their non-appreciation of our politeness, we made our soup and took a pot thereof with a spoon down to the dusky ones. Nannie, though a queen, chuckled and fell to; the older couple went slow at first, but very shortly the old man took the lot and we beheld with sorrow our one and only gravy spoon ladling the soup into his capacious mouth. Supper ended, we were just going to put up our tent when they — seeing that their efforts to get back home were useless — complained that the rocks of low tide would be too much for the canoe and there was no place for them to sleep. It was said that there was a good shelter not far off in the proper direction and that they were willing to make a dash for it. So in we got and our possessions. It was after 9 p.m. and dark and blowing hard with an angry sea when we turned our faces once more to the goal. For an hour and a half we forced our way ahead, Nannie now really working, Magee and Skinner toiling like beavers, I in the bow, drenched to the skin as I scooped out the water with a wooden ladle. Looking down the canoe in the dying of the day, the old captain made a striking picture. His atrocious hat was put away, leaving his long black hair to flow and float away behind his dusky features. He sat in the stern with his face set and hard, whilst his eyes had a peculiar gleam in them, both alert and defiant. Onward we sped, close to the rock-bound shore, no beaches, but the trees towering up from the water's edge, the waves rushing against us, and our little cockle-shell breasting them in knife-like shape. Ever and again some waves larger than the rest would sweep down on us, and empty itself over cargo and crew, but not a soul would stir. Their haven of rest was a myth. Site after site was jabbered of, but absolutely out of the question when arrived at. Again and again we sped along, making for some dark headland round which would surely be found, but only to meet with disappointment. Till near 11 p.m. we fought the elements and then came to a sandy beach out of the wind, where we right gladly hove to, weary, wet and disappointed. Again we helped the women out, the captain thinking other things more necessary, then lit our fire three yards from the water. We wondered why the old fellow gathered sticks but struck no light, but found out his long-headedness in short order, for no sooner was our fire a-going than he coolly took out our six best glowing sticks and with them set his own aglow. They told us that they would go ahead with sunrise or maybe wait till 8 a.m. for the proper tide, and soon they were jabbering again and eating, which lasted I know not how long, for we fell asleep to their sound, lying under the trees with no cover but a blanket and our feet as close to the fire as could be.

**Friday, July 20<sup>th</sup>** — At 3 a.m. I awoke to find them jabbering still and hoped that we might be allowed to rest for the tide's turning, but at 4 a.m. the Queen came over and woke us, saying that we must get into the canoe at once. Scrambling our things together, we got in, but half awake and wholly damp and cold, and breakfastless, to find that they meant to go home, come what they might. But we had secured the paddles and showed them that they had best trifle with the white man no more. Had they been men, we would not have been so handicapped in dealing with them from the first, but we were getting positively savage by these delays. The captain was mad and the painted Queen looked very sad. Then they asked how much we would give them to go ahead and we told them we would give them nothing, but we would carry them whether they liked it or not. So the 'cargo' submitted and we pushed forward in the cold, raw blowing morning. We passed two rancheries, but they were empty. At each there flowed out to sea a fair-sized river, <sup>61</sup> marked and named on the chart, and occasionally on the western side there was a cascade and waterfall, very picturesque. Skirting round

---

<sup>61</sup> Teeta River and Cayuse Creek

the lee shore of Long Island at 8 a.m., we saw our goal. It has a pretty approach, much narrower than the head of the West Arm. Two streams run in here, thus forming a grass flat, on the west side the Neeta <sup>62</sup> and on the east side the Cayeghle, <sup>63</sup> the latter dividing near its mouth, but when high tide is up it forms a noble stream. Paddling up the river Cayeghle, we saw at some distance from the mouth some shacks and were told that owing to the lowness of the tide and the swiftness of the stream, the canoe could go no further, but that no difficulty would be found in carrying our packs along the shoreline. We believed them and thought that, anyway, they would stay for a meal, so that we could get their help if needed, but no! they were treacherous to the last. No sooner were we out of the canoe and had paid them than they turned their nose to Koprino and soon got out of sight. It did not take long to find out the fix we were placed in, knowingly by them.

The shacks were indeed on the same side of the river as we, but between us and them there was a bold, rocky headland along which the river ever sweeps and over which it is not possible to pack. We all managed by creeping along slippery rock and hanging to trees and brush to gain the shacks, Magee alone carrying anything, and had to leave our goods to the mercy of the rising tide. The shacks once gained, we soon lessened the amount of timber in them, for we quickly tore down the best and broadest boards to make a raft, laying them two and two across each other, till the food would be out of the water's reach. Then Skinner manned the ship and poled down to the supplies and clothing. The stuff could not be taken all at once and it was hard work to pole alone against the current. Alas! before he could reach the last of the things, they were afloat and when brought to the shacks much both of food and clothing were badly spoiled. This was serious, for there could be no more supplies obtained until Woss Lake was reached. But being all easy tempered men, we made light of it, raised out tent — the shacks were too forbidding to enter — lit our fire, and soon had a good breakfast, closing thus our experience with the Quatsino Indians and their Queen, only too gladly. I was grateful in not being saddled through the whole trip with any of the tribe, coming so close to being so as I was, for on the recommendation of Frigon, I was thinking seriously of adding a dark gentleman with the euphonious name of Koomoonawqness to my party, who himself was anxious to go, though he dreaded the unknown section, but was prevented by the dictum of his wife and young son, who stoutly objected to being left alone to look after themselves. With the readiness to please their children that is one of the most marked characteristics of Indians generally and often compels them to give up much at great personal loss, he complied and I was saved from what might perchance have been a great source of worry when stout hearts and willing hands were sorely needed as to the lay of the land we had been passing through. At the entrance to the southeast arm opposite Pender Point and for at least eight miles down the south side, there run four gigantic mounds of earth and timber. They are mountains, but one cannot apply the term to them with much propriety. They look as if built with the spade; all are the same size, catching each other up with a slight overlapping at the base towards the sea. Their tops are almost perfectly straight, and I should judge them to be not far from 1800 ft. high. They are well named the 'Giant Mounds'. Then across and looking down upon them, 'Cathedral Spires' Mountain, 2500 ft., stands at the extreme north end and back of the short and low ridges that run down to rock and the water for some three miles down the arm. I could learn of no open land back of the ranges on either side of the arm, but we were told, and later on saw for ourselves, the two valleys, the Maad and the Tsa-site, <sup>64</sup> that the two rivers course through on their way from their sources to the sound and sea. We learned from the Queen of the Sound that the Tsa-site River salmon were immensely large; the Indians throughout the North knew of none larger. This river enters into Marble Cove almost opposite Rupert Arm and on the east side of the narrows. What I learned for the first time, though doubtless every fisherman knows perfectly well, is that according to the Indian's theory,

---

<sup>62</sup> Colonial Creek

<sup>63</sup> Cayeghle Creek, and not *Cayeghle River*, as labelled on British Admiralty Chart 582 of 1864.

<sup>64</sup> Marble River

all salmon return to the particular stream where they first saw the light and tasted life. This and much more, but most of it was too frivolous to make note of, we learned from Nannie, who was able to speak Chinook, a jargon spoken with much ease by Magee, and who thus acted as our interpreter with the captain and his klooch. Tired from our previous day and having had but little sleep, we spent the day resting and drying packs. We needed to start fresh, for now at last we had come to where we were to be real pioneers and the outlook did not appear very captivating. Look which way we would, we could not see anything but mountains and the thickest undergrowth. With the morrow, we were to make the first plunge, with Snowsaddle Mountain our first objective point, from which to gain knowledge of what, in general terms, this part of the Island consisted.

**Saturday, July 21<sup>st</sup>** — We woke to find it raining heavily, but soon it turned to showers, and by half-past ten the sun had conquered. Saddling our packs, we once again faced the timber, not altogether sorry to leave the ‘salt chuck’ and its tides that meant delays, and headed towards the southeast. The first thing to be done was to wade through the Cayeghle River, as its western side was our line, then into the long rank grass that abounds at the head of every sound and inlet. Not 300 yards from the start, we shot a choice yearling buck, just suited to our needs; it dropped in its tracks and though this caused some delay in cutting out the meat, yet it was far from time being wasted. Adding, therefore, the venison to our well-loaded packs, we pushed on and into the deep underbrush, hard to push through and involving any amount of tumbles and headers. We found an immense amount of salmon-berries, exceedingly large and of a prime taste. So we took dessert there and then, for we knew not how long it might be before we touched fruit again. Finding the brush too much, we took to the river and made lunch, venison and the purest, loveliest mountain water being our fare. A fine sawbill going upstream was too much a temptation for us, so we included him in our bill for supper. We waded up to our knees for about a mile after lunch, then, finding the woods looking more open, we re-entered them and kept going till we had made five miles, when we camped hard by a small canyon, where a slight stream ran down into the Cayeghle. We kept steadily to the southeast all day. There was abundant sign of bear, and deer cannot be over-scarce. The timber is fair-sized hemlock, with occasional spruce and cedar. Jerking venison and drying clothes kept us busy all the evening.

**Sunday, July 22<sup>nd</sup>** — We covered five miles this day, working eight hours to make it. We stuck to our course despite very difficult country. Huge rocks running hundreds of feet high had to be got round, canyons to be avoided, streams to be got across. We saw many lovely waterfalls, but none of any very special size. Not a yard of arable land; not room to set a house on. Walking tested our ability to keep on our proper base to the utmost and I, for one, fell headlong a hundred times. Towards evening we struck the Tsa-site valley, having got over and around the divide between it and the Cayeghle, and beside the river itself we camped in a salmon-berry patch of many acres. Here were the largest bushes and berries I ever saw. Of course, there was much sign of bear and deer, too, and what pleased us more, the track of an elk told us we were getting to their run. The same timber as the day previous, but the spruce larger. We struck the river about 25 miles from its mouth, and that it is a large river we could easily infer from the volume of water that was then passing camp and the dry riverbed of its winter overflow.

**Monday, July 23<sup>rd</sup>** — When night fell, we had made camp 3000 feet above the sea, under the shadow of peaks of Snowsaddle Mountain. A beautiful sight from our tent door, despite the rain, which fell all day most steadily and far on into the night. Every way we looked we could see mountains, and every valley was hidden by densest timber. Snow very plentiful; indeed, we camped on a snow flat, and waterfalls abundant all but just where we were. Across from where we stood there dropped down from the very top of Snowsaddle one very picturesque cascade. From a great mass of snow, it came creeping out at first, then as it dropped to lower ridges, it gained in bulk till, as it shot down into the darkness of the canyon across from which we stood, it was a volume of water that could play havoc with aught that might oppose it. The tramp this day brought us into view of and across more waterfalls

than I have ever seen before in a whole week's mountaineering. It was a hard day's work and we were completely tired out when it was time to halt. We had hoped to gain the summit, but the climbing was very difficult and slow. All day we followed up the Tsa-site River, having it at last far below us in the valley to our right. To get round Snowsaddle, we tried our best, but no 'pass' showed itself, so up we had to go, and encouraged ourselves with the knowledge that from the high peak we should, if fine, gain a view that would lay the whole country bare to our eyes. Across the valley, from where we fought our way through dense undergrowth and obstructing rocks and trees, there ran a similar range of mountains and at the head stood Snowsaddle. The average height of these two ranges would not be under 3000 feet. No insect life was seen, no flowers, no mineral and no large timber. But we came across a great deal of beaver work soon after leaving camp, and for the first time came upon the trail of elk. They seemed to have lately been in the valley, for their marks were fresh, but though we followed carefully for miles, we caught no sign of the great beasts. They probably have a run from Marble Cove to the head of the Tsa-site River. Our packs, heavy in themselves, and made more so by the rain, made climbing a great labour, and as we neared to top, it was a question whether we should be able to get up, for the rocks were exceedingly slippery, and what earth there was stood no strain upon it. It became needful at last to give each other a helping hand, and frequent 'rests' were called for. Despite disadvantages in the shape of but limited level space for the tent, poor timber and nothing but snow water, we decided to stop before it became too dark, so lit a huge fire and tried to dry our things. Our guns were in a pitiable state.

**Tuesday, July 24<sup>th</sup>** — A day not easily to be forgotten by any of us three. At 5 a.m. we were about and thought we saw evidences of a clearing sky. Hasting over breakfast and packing, we were ever ready to reach the top of Snowsaddle, up which we had climbed all the day previous, from the top of which to gain the coveted views and plan our future movements. But the rain got ahead of us, and as if rebelling our intrusion upon parts of which nature had heretofore held monopoly, came down in sheets and torrents. We took an east course and climbed 700 more feet, drenched to the skin and very much chilled. There was snow everywhere now and we found it easier walking than over rocks and pushing through the short bush. But had we slipped, we would have shot down to the depths unknown and deadly. Just as we gained the summit, we had a glimpse of what lay to our left. It was well we had not attempted to reach Snowsaddle by any valley that way, for perpendicular cliffs of rock would have faced us, which would have been impossible to climb. I believe that we came up the only possible way. To our right was just the other side of the range we were now on; we were permitted just a peep and then all was gone for the day. But such a view! Down at a great depth below us lay the inevitable valley and in it a beautiful lake, its water still and like a mirror, surrounded completely by heavy timber.

The drop into the lake looked anything but inviting, a series of short precipices, seemingly being the only ladder of escape, and across the valley there rose another range of mountains, the grandest of all I met. They rose up sheer rock from the valley to tower as high as the mountains we were on, yes, and higher still, peak vying with peak to break off in fantastic shape. I could think of nothing these resembled more closely than the noble El Capitan of Yosemite. Indeed the entire valley put me strongly in mind of that world-famed and exquisite spot. There are few more noble mountains of rock on the Island, and I venture to say on the Mainland of British Columbia, than this superb range, which in the commemoration of one who was so instrumental in making it known to the public, I named the 'Bostock'.<sup>65</sup> Now the rain came down upon us in pitiless style, and a mist swept up from the valley so that we could not see ten yards ahead. The wind, too, increased in force till it blew a very hurricane. Do what we would, we could not get warm, nor could we find decent shelter. We were determined to get another view, and a good one, and prepared to stand the storm as long as we could. But should

---

<sup>65</sup> [Hewitt Bostock \(1864–1930\)](#)

the storm not cease by afternoon, it seemed our only course to try to get down to the valley for shelter and re-climb to take the observations. By dint of perseverance we made a fire between a huge saddle formed by the rocks, and there cooked our lunch, taking it standing with the rain running down our very skin, and the side nearest the fire frizzling whilst the other side of our poor bodies was freezing. For over three hours we waited, stretching our limbs by taking a run over snow banks and an unpremeditated toboggan slide, but neither rain nor wind ceased a jot. Then we went forth to seek a camp, so as to avoid a descent down the precipitous mountainside under the existing conditions, but none even pretending to decency could be found. Then we felt we should have to descend, so shouldering our packs we set out by selecting the ridge that seemed to run down furthest into the fog. Creeping down by rock and crevice and canyons filled with snow, we descended some 1000 feet to find our way blocked effectively by sheer falls of hundreds of feet. We were surrounded now by grave dangers; ahead we could not go; back we should have to climb up snow banks; to right and left was no whit better. We could see, at best, but a few yards ahead. The afternoon waning, feet were so chilled that we could scarce grip rock and bush for footing. Three times I shot away from the others, and but for a reserve force of harlequin agility would have shot over the precipice to land in the lake below, ahead of scheduled time. There was nothing for it, however, but to get back to the summit, and there put the night in as best we could. It was with the utmost difficulty we regained the height, Magee with the axe having for many yards to cut steps in the well nigh perpendicular snow banks. Despite the freezing welcome, we were uncommonly glad to see the summit again. We got back to almost precisely the same spot we started from. It did not take us long selecting a campsite. There could be no thought of decent shelter. The timber was of the most miserable description, and exceedingly stunted and twisted, we could not find a ridge pole for the tent, hunt where we would. We tied a piece of cord from one small tree to another and hung our tent thereon. This made it hard work for tall men to get in and out, and standing inside was an impossibility. The wind soon showed that it meant severe work with us, for it blew in every direction, lifting the tent until we thought it would fly off the mountain and driving rain through the canvas. Slowly we conquered over wood and wind with our fire and made supper. Realizing the necessity of keeping a fire going all night, Skinner, all soaked as he was, kindly volunteered to stay up and bravely keep watch till 4 a.m., when Magee took turn. The heaviness of the storm passed away at 2 a.m., but with morning there was still a blustering wind, a fine rain and an impenetrable mist. So ended our ascent of Snowsaddle, and it is not likely to be forgotten by us whilst memory lasts. We came across some blue grouse during the day, but dared not add to our packs. As to flowers, we found heather, both pink and white in abundance, also a beautiful white-petaled flower with a yellow centre, which grows luxuriantly in the water-courses made by melted snow as it makes its way to the sea.

**Wednesday, July 25<sup>th</sup>** — The morning wore on with the same impenetrable mist, and we were captive of the elements. We simply dared not venture down. It would have been at a risk that we were not called upon to undertake. So we made ourselves content in our greatly reduced tent and passed the day as best we could trying to keep warm, trying to get enough wood cut down and water out of our abode. One of us sallied forth about noon with murder in his eye, but neither beast nor bird was seen. Towards nightfall we could discern signs of a better morrow, and rolled up in our blankets with hope in our hearts.

**Thursday, July 26<sup>th</sup>** — Our hopes were not disappointed. The morning broke with a clear sky, and hurrying forth to a good and bold vantage ground, we beheld a magnificent panorama. As far as the eye could see, on every side, was range on range of mountains, scarce one without its quota of snow. The valleys were very narrow and everywhere were mantled with timber. The South East Arm was hidden from view by the range we had skirted to strike the Tsa-site valley, but we could plainly make out where our path had been. It looked forbidding enough at a distance; Snowsaddle itself looked very imposing, the front and back of the saddle being of a dark-coloured rock, and the seat itself was a snow bank of ungetatable depth. On three sides it is extremely precipitous. It would be no easy

matter to trace the ranges on a map, as they are so thick that they run into one another in a kind of hopeless confusion, in places making the valleys very short, but never an one without its stream. The finest sight, however, was that which lay in the direction we wished to go. The range seemed made of granite for miles, whilst the peaks in the far background looked black as ink, save where they had a mantle of snow. Behind these again we could see another range, and we knew that both of these lay between us and Woss Lake. To attempt to go in a straight line would have been absurd; there seemed one pass that might be taken up a canyon leading to the summit of the range, but what might be beyond that point, we had no means of knowing. The valley seemed our best course for, though it ran too much south, yet we could discern a valley running into it some miles down and this would bring us back in a line to where we then were, and behind the Bostock range. We were right eager to get off our mountain, so hurried over breakfast and soon stood ready to make a second attempt to descend. And we succeeded, but what a descent! We descended over 2000 feet hanging on to small shrubs and trees, creeping along on our hands and knees, our packs unsteadying us, baffled again and again by sudden drops of great depth, but no turning back this time. It took three hours of incessant effort to reach the bottom, and right glad we were when we stood by Mirror Lake and looked up as free men to our late prison house.

There was but one way of getting down, and this Magee's keen instinct for mountaineering showed him. No blame to us for not finding it before, when well nigh a London fog hung over us. There were places crossed that day by us — ledges of rock without a shrub to hold to — that few men in cold blood would tackle, but not a slide did we take, nor did we have a more serious accident than Skinner's leaving our lunch — which we always carried in a small tin pail, to prevent having to undo packs — at one time on the way. But this was overcome and, after a stiff climb, the 'muck a muck' was secured. Down by the lake we ate it, in a lovely spot with little undergrowth, but huge cedars well apart. We found this lake to be one of two, though not till later on did we see the Upper Mirror Lake. The lower is the smaller, being some third of a mile long. It seemed as if nothing could ruffle its placid face. At the south end there is considerable timber fallen and this, piling itself up at the outlet of the lake, forms a dam that helps to keep the lake waters up, but prevents the stream that flows out from being of any great volume. This river we determined to learn more of and, after lunch, followed it down, purposing to keep with it to at least where our valley should turn off. But an episode happened that prevented us from reaching that point on that particular day. Finding the banks hard travelling, we kept in the stream itself, but even this became rather hard work, for streams came pouring in from both sides, and soon its volume and pace were greatly increased. It is a lively stream from its inception and runs over a rocky bed, in which we picked up specimens of what was close to purest marble. This was especially the case about one mile from the lake, where 'Marble Creek', <sup>66</sup> a broad stream from the Bostock range, joins issue with the river. A little further on, we found the river totally disappears for some quarter of a mile, then, resuming its natural course, begins to take the inevitable leaps downward. Along the dry bed we walked, though in places it was anything but dry, by reason of pools caused by the late heavy rains. We were making good time, despite a drizzle and breeze that had now set in, anxious to know more about this river that was making its way to the sea, when a bear upset all calculations. We were trudging along, just within the timber some fifty yards from the river, when Skinner's quick sight spotted bruin. Packs were off in a trice and, throwing a cartridge into my express, I drew a bead on the big black beast and put a bullet into his neck that dropped him then and there. No fight in him, though I confess to leaping a prodigious log and putting in a second missile, ready for emergency. We measured him and found him from nose to rump 5 feet 7 inches; weight, about 370 pounds; not fat, and with very fair skin for this time of year. We wanted fresh meat and were glad of this, though we well knew that it would be tough. The sirloin and the liver are the

---

<sup>66</sup> Price Creek

delicacies of the beast, and, desirous of taking the skin out with me, I made camp and set to work on our victim. We had changed our course on reaching the valley from due southeast to due south.

**Friday, July 27<sup>th</sup>** — Another day of drenching rain, making progress so slow that I decided to remain in camp and make up for the delay in better weather. We occupied ourselves with bruin's skin. What caused us some anxiety (and was to cost us much more) was the fact that we had been able to bring only sufficient supplies to keep us for a straight run through to Woss Lake, eked out with game found along the way, and here were days of inaction caused by the bad weather. Magee climbed in hopes of seeing the meeting of the valleys, and what sized stream came into the one we camped by, but failed to make wither out. We had dropped into poor timber again, which meant, of course, poor fires. Of open country we had not seen a vestige since we left the grass flats at the head of the Southeast Arm. To the river we had followed down from its source, not seeming to have any place or name on maps and charts, I gave the name of my efficient assistant, and none who know him could refuse him the compliment. The river empties into Kokshittle Arm.<sup>67</sup>

**Saturday, July 28<sup>th</sup>** — We reached the meeting of the two valleys by camp time, and we found the stream we surmised would be there, running down to add to the waters of the Magee River. From what occurred later, we named this new stream Elk Creek. The rains of the previous days had added greatly to the volume of water in each stream. Navigable they are not, and in places they are not fordable. Leaving Bruin camp, we made along the river and bank for a little way, only to find our progress blocked by a sheer perpendicular rock running hundreds of feet straight up from the river. We could not get around it, for the water was too deep, nor over it without climbing a mountain, so packs were taken off and a large tree that stood most opportunely was hewn down and dropped across the river just below a very beautiful waterfall. Crossing over on improvised bridge, we made some distance, the sun now mastering the rain clouds and giving us fresh spirit after hours of rain and gloomy weather. Then it was very evident that the side which we had left had become the best for travelling, for there we could skirt along the base of the mountain range, whilst on the side we then were on, we were more in the river than out of it. So, again, the axe was brought into play, and another bridge made and crossed on. It was comparatively easy travel that now lay before us, though there were occasional climbs that put bootnails and grip of fingers to the test, and when six o'clock came, we stood by Elk stream and felt that a good day's work was done. Our course was S.W., then S.E., then almost due E. Within a stone's throw of our camp flowed the stream, which about a mile below joined issue with what, where we left it, may be termed a good-sized river.

**Sunday, July 29<sup>th</sup>** — Though rain was falling heavily, we sallied forth, keeping the stream we had camped by on our right hand, and at once struck the track of elk; by the size, we judged them to be full-grown beasts, and by the freshness, that we could not be very far from the band. Bruin being in summer condition, we were in possession of but little grease, and further, had not thought it wise to add to the weight of our packs with poor and strong bear meat. It would, therefore, mean a great deal to us if we could just there and then secure an elk or deer. The tracks led through the bush and timber directly in the east course we desired to take; up hill and down dale we went, the light increasing as we journeyed, giving evidence of more open country ahead. Not that we could expect anything else but mountains and ravines, with rushing streams, but we expected and we found the timber more scattered and thickets giving place to acres of alder and salmon-berry brush. Noon had just passed when we came upon such a place — a large vale, on both sides of the stream, with acres and acres of salmon-berries. Magee was in the lead as we dropped over some rocks and fallen timber, and reached the more open country. Noticing straight ahead of him, some hundred yards, the tops of the tall bushes wave, he beckoned back to me to move quickly up, and as I did so, we saw what we had come so far

---

<sup>67</sup> The name was changed to *Kashutl Inlet* in 1934.

to find. There were but two in sight. Dropping my pack as if had been a feather, I threw a cartridge into my express and put a tree between the elk and self.

One had become uneasy and came up and out of the bush to some rocks, and began to move away upstream. I was about pulling the trigger on the great beast when, straight in line, there came up and out of the bush another and a larger one. Standing broadside on, the noble animal turned its head to look toward fancied danger, thus giving me the exact spot I wanted for a death wound, the neck slightly bent. It was but a moment's work to draw a bead thereon and fire. Down to earth the elk came, dropping in its tracks. No need for a second shot, though, had we wished to, there was the first beast still in view, but to kill it, if a shot as it trotted off had been successful, would have been slaughter, and we had secured all we needed, meat and fat. When we turned butchers for a while, we found a splendid condition of things. Of course, all hope of going forward was abandoned for the day, and we were busily occupied 'rendering' lard and drying meat till nightfall. The latter we effected by cutting the meat off in long strips about a foot and a half long and three inches through; then, laying these strips across wooden bars supported by uprights, under which bars we kept a smouldering fire. For lunch and supper, we had sirloin of elk, than which we could not imagine a more tasty cut of meat. Then we found excellent firewood, and as level a camping ground as any man could wish for. We had met and secured both a bear and an elk in the same valley, and were well satisfied with our success, but to get in where we had found the game had been no light task. We realized that to pack much of the animals out would be an impossibility, the meat being the infinitely more valuable thing at the time. About the camp we saw what showed us plainly that we had struck the fringes of a large band of elk, and might at any time see more as we moved up to the head of the creek on our way through the mountains towards Atluck Lake.

**Monday, July 30<sup>th</sup>** — A day that any sportsman would ever remember with keen pleasure, not because of weather, for it was raining on and off all the day, nor because of elk seen here, there and everywhere. We had struck a veritable elk's paradise and saw what we could scarcely hope to see again the like of. As we surmised, we had on the previous day but touched the real elk valley and its herds. Travelling in a northeasterly direction, not fifty yards from camp, we came upon a broad, deep trail, as if herds of cattle had passed that way year after year; then came a veritable barnyard, great patches of ground trodden down like on a cattle farm. We followed the trail closely; no one could fail to see it, for at times it became a broad road, always in the best spots, always avoiding the difficult places, ever and anon coming out of the timber into vales and dales of salmon-berry brush, alder and grass. The way led down to the stream, and we crossed by means of a great tree that lay nearly across the whole width from one bank to the other. Not two hundred yards from re-entering the timber, we sighted a beautiful cow elk. She stood looking at us for some time, not a hundred paces off, then, after taking us all in, slowly trotted off in our direction. We tramped till noon, climbing almost all the time and following the stream to its head, and then suddenly came out upon a pretty vale, where two cows and three calves were resting and grazing. Though we came out on them within fifty feet, they did not move. We were slightly below them. One of the cows remained lying down for some time. Both parties stared long and hard at one another. There could be no thought of slaughter; all we wanted was to grasp that this sight was a fact, not a dream. The five beasts were perfect in their beauty and condition. Their rich colour was set off well by the bright-hued verdure around them. Back of where they stood there ran up a cleft in the mountainside till it lost itself in the summit. A thousand yards above us we could see the snow completely filling up the crevice, and reaching down till it touched the feeding ground. I profoundly regretted not having the camera. What a unique photograph it would have been — two cows and three calves, taken in their native haunts, and so close, too, that every detail in their symmetrical forms would have been reached by the kodak. For a full quarter of an hour they stood there; we at first sitting on our packs and enjoying a rest after our climb, and then cutting down wood and preparing our lunch. At last they moved off, not in the least terrified, the little calves — though each was as large as a good-sized three year-old black-tailed deer — trotting along by the

side of their mothers. We tried to make out which mother possessed the two, but it looked to us as if the three were community property, and neither mother insisted on proprietary rights. After lunch we took up one of the two trails that lay before us, but it happened to be the wrong one, leading us to the end of the run and placing us in a cul-de-sac. Precipitous rock, running mountains high, faced us ahead and walled us in on both sides, whilst we were walking over an immensely deep bed of snow. Turning back, we made for lower ground, and after a hard fight with the bush we struck the lower elk trail. Coming out into another vale, we saw four more elk grazing, one heifer so close that Skinner went forward with the determination to stroke it, and creeping up under the shelter of the roar from a mountain stream — a feeder of the Elk Creek — very nearly succeeded. But better was to come. Entering the timber again, we seemed as if surrounded by elk; seven great bulls stood together, facing and looking down upon us. A little way from them there were seven more, with cows scattered about, and calves making their peculiar squeaking, squealing noise on all sides. I confess it was hard to keep one's fingers from touching the trigger. But we came safely out of the ordeal. We stood still and again tried to take it all in. They did likewise; then, after a long and serious gaze turned and made up the creek. Keeping on their track — or better called a road — we made about a mile when we came upon a scene which eclipsed the other. How many were there of bulls and calves, we could not tell, but the land was alive with them. We did try and count them, but it was hopeless, for they seemed behind every bush and tree in sight. They cared no more for us than for the chipmunks in the trees. We sat and watched the great bands for a time, then striking out, we made for camp. As later on we sat by our fire eating supper, the elk came on the scene once more, and slowly passing camp, gazed long and enquiringly at tent and glow. To see what we saw in that one day was worth every bit of labour that it had taken to get in there, and made all the way ahead seem lighter. If we had been out for record-breaking and for slaughter, we surely would have piled up such a total of deaths that would have beaten all traveller's tales. The elk showed not the slightest fear of us; none were more than seventy yards from us and most were even closer. We were privileged persons, and the profound stillness of the woods was broken as yet by no sound of firearms.

**Tuesday, July 31<sup>st</sup>** — A hard day. We found the head of the creek gave no passageway in the line we had hoped, so we had to make a detour and then strike boldly up over a 'divide' that seemed to promise a way of escape from Snowsaddle and the Bostock ranges in the valley of which ranges we had been travelling so steadily. We were fortunate in being blocked, for we gathered much information that the other way would have kept hidden, whilst it would not have furnished — so I afterwards found out — anything like the same amount of data. It was a roastingly hot day, though this we gladly forgave, since it was the first really fine day we had had since we left Koprino Harbour, and we had a climb ahead of us of over 2000 feet from our camp, and then a descent to the valley which brought us to within 700 feet of sea level, or a drop of close on 3000 feet. The descent we shall not readily forget; it was decidedly more dangerous than Snowsaddle and more than once we thought we should have to climb back and seek some other and more accommodating 'divide'. We found elk in the valley, dropping almost amongst them as we reached the river at eventide.

They are evidently different bands, for there is no other way than that by which we came to reach the two valleys, the one from the other, and whilst the trails run high up on either side of the divide, they cease a long way from the summit itself, in either direction. An early breakfast over, we took up the trail we had seen the elk upon the previous evening and climbed steadily for three hours. Nearing the top, the snow as deep and very plentiful, and, as a finale, a very nasty place had to be crossed where a slip meant certain death in a dark canyon below. With the greatest care, we made the pass and then felt we were entitled to our lunch. Just where we rested there was heather and but little snow, but the hot sun was melting the passes above and everywhere was moist with tiny streams making their way to the valley by the shortest route. We had a grand view of the country, but a still finer one was obtained when, lunch over, after another hour's climbing, we gained the top. Here we saw a magnificent panorama and gained a knowledge of the whole lay of the land that an ascent in a balloon

could not better. The whole country, whichever way we looked, is but one endless mass of mountains. Ranges get all muddled up, breaking off here, there and everywhere. I counted, however, five clearly defined ranges between us and the sea, upon our left as we faced Quatsino Sound, and the range that runs between the Atluck and Woss Lakes, heading into Rugged Mountain, could clearly be seen. Without turning the head, we counted over one hundred distinct peaks. Some take most fantastic shapes; most of them are rocky with some light timber. We could clearly discern the sea in two places to the west, and, though at least twenty miles off, we saw the reef of rocks with the water breaking endlessly over them, known on the chart as 'Blind Entrance'. In the same valley as we had seen Mirror Lake, we saw its feeder, the Upper Mirror. It was a grand but disheartening view, for there did not seem, despite the beauty of the land, one spot where man could make his habitation. Anxious to keep along the backbone of the ridge for at least some distance, we essayed it, but found ourselves blocked by a mass of rock that looked as if built for a fortress. Skinner, dropping his pack, climbed it with much difficulty, but only to find other peaks far worse. To get around them on the other side was an utter impossibility, for they dropped off sheer and straight. There was nothing for it but to descend at once into the valley, and a hard-looking place it seemed to be to get at. It was 3 p.m. when we commenced to descend, and it was 8 p.m. when, wearied and bruised, we stood by the river. Magee here had a close call, his pack over-balancing and holding him for some time in a position from which he alone could extricate himself. Ridge after ridge we tried, but they were all false, dropping off suddenly. At last we struck one that we felt sure ran right down, but to get on to it from where we were meant to crawl down and crawl up where it could appear that flies alone could triumph. But the need was desperate, for a night on a mountain where snow and rocks and earth are constantly giving way and rushing down with a roar into the valley is not a pleasant situation. We got down and we got up, but it was the tightest climb we had on the whole trip, and to slip back meant extinguishment. Then we put on the pace and went at a jog trot down through the underbrush. This meant endless falls and slides and jumps into space, all of which we went through and came out of safely, save for a general shaking up and a bruise or two. Once we struck the valley and the river, we sought a camp and were soon enough through supper and off to sleep.

**Wednesday, August 1<sup>st</sup>** — We had set this day as the time for our arrival at Woss Lake, but we had counted upon finer weather and less tremendous ranges than was to be our luck. After a good rest — for the previous day had told upon us and repairs had to be attended to — we started down the valley. We made good time, for by 5 p.m. we had covered five miles. We kept a south-southeast course and sometimes were on the elk trail, sometimes in the riverbed. This is the most remarkable stream we came across. In a distance of five miles, it totally disappears, when of large volume, in two places, both over half a mile in length. This it does, as we saw, all its way down to the sea. It must be a very broad stream in winter, for immense timber is strewn along its banks and in its bed, and the distance between its banks is at times most surprising. Not finding it on any map or chart I had with me, and no Indians being able to recall it when I sought news of it from them later on, I named it 'Dry' River. Its valley is a far more respectable one than any thereabouts, and in it salmon-berries grow abundantly. The bushes were eaten low down by the elk. We came across sign of bear, wolf and black-tailed deer. We made camp close to a fir tree, a giant luxury, and a tree which we had not seen since leaving the Sound.

**Thursday, August 2<sup>nd</sup>** — Following the riverbed in the same south-southeastern direction, we made good progress for over a mile, and were proposing to do big things, when something small fell out that upset all calculations. After a dry mile, the river springs up once again, and some mile from where we knew another river met it — and which river the chart gives as the 'Atluck', but which is not correct — we found our path suddenly cut off by many streams that rapidly appear coming up from below. We did not want to go back, so chose a spot to cross, not very wide, but deep, and, throwing three limbs across, the only ones handy, thought to cross and gain the lightest timbered bank. Skinner crossed upon the limbs with safety. Magee, after some consideration, decided not to chance a bath,

so wading deeply somewhat higher up, got round the difficulty. I preferred Skinner's way, so, pack on back and rifle in hand, essayed the tight-rope trick and ignominiously failed. Weight will tell, especially on old and sodden limbs, and stepping on the weakest spot on the weakest of the three sticks, just when over the middle of the stream, I went down.

I am fond of diving, but I never before took a dive backwards, such as my pack compelled me to. I fought hard for my rifle, but the current was determined and took us all in — rifle, pack and man. In due course the bank was gained; then the rifle had to be sought for and rescued; then clothes dried — for our wardrobe was not over extensive. But a blazing sun and hot stones soon set everything to rights and, after lunch, we set out once more to reach the confluence of the streams. With 'False Ears' Mountain on our right, we knew from our maps that we must be near. Rounding a point which gave us not the slightest information, we came upon the stream, and found it to be a broad flow of waters, fairly deep, running between rocky sides. We were but a few miles now from the sea and near the head of Tahsish Arm, with a rancherie there, evidence of which we now saw by cedars cut for boards. But far from their dwellings, the Siwashes will not go, so the elk and the bear are still free to roam in the valley we had seen. The Tahsish Arm should not be confounded with the Tahsis Canal. They are some distance apart, though both on the West Coast. We were now at the former; we were canoeing down the latter some weeks later. Up the river — which the charts showed led to Atluck Lake and named as the Atluck River — we went, wading through it up to our waists three times in half a mile, so as to get past canyons. Then keeping along a ridge in an easterly course, covered some three more miles and made camp close to the river in a lovely spot. The mosquitoes and sandflies were here worse than any place else on the trip, but even then nothing compared to what we expected. We found an elk trail towards evening going upstream. The hills here are more open and there are patches without timber. Fir is fairly plentiful and cedar most abundant. Here would be a grand place for securing telegraph poles; they seem to stand together in thousands. We had hitherto found no fish in the streams, owing to their character, but now we beheld to mountain trout again. From the direction the river came, we felt instinctively that it could not come from Atluck Lake, but would not give it up until we knew more positively. We had counted so much upon this stream, so authoritatively placed upon maps, that it was a severe disappointment to us to see what we felt so sure of — that we should have more straight cross-country work to do. But once again, the falseness of the stream led us to find what otherwise still lay hid.

**Friday, August 3<sup>rd</sup>** — We made good headway this day, though it did not take us very much nearer Atluck Lake. We followed the river up steadily, mile after mile, going north till well on in the afternoon, when, finding it take a decided turn to the northwest, and thus taking us back to Snowsaddle, we turned, with regret anyway, and naming it 'False' River, headed southeast once more. Eight times we had forded the full river, and then its main branch, in the tramp, and the current was so strong that we had all we could do to keep on our legs. When in the woods, we followed another splendid elk trail. There must be a great band in this country, also bear, deer and wolves. The river is not navigable, for, though on the previous day it had shown no great difficulties, this day it evidenced that it was as bad as the rest of them. Falls are numerous and rocks are everywhere. There are signs of a good mineral district and we found excellent evidences of copper. The land is fairly low about this river and it would not be altogether out of the question as a cattle run. When we turned from the river and made straight to where we believed the lake to be, we had a network of brush to contend with, and brought up in the midst of it, with just enough room to camp and make a fire.

**Saturday, August 4<sup>th</sup>** — With the rain falling slightly, as if loath to leave us alone and dry, though for one calendar month now we had been uncomplainingly enduring it most of the time, we forged ahead. It did not take long before we were glad that we had been taken out of our way. When about 1300 feet above sea level, and in a fairly low and lightly timbered section, we dropped on two lakes, not very large, but most picturesque. Each would be over a quarter of a mile long. Not two hundred

yards of timber divides them. They empty in a southeast course. Being so similar of size, shape and general appearance, I named them 'Twin Lakes'. Wild flowers, especially violets, were growing luxuriantly around them. A long tramp, followed by lunch, filled up the morning. Then up hill and down dale till we came upon a third lake, but this has been spoiled by the work of beavers and cannot be called aught but a morass. Around this was the densest undergrowth; every inch of ground had to be fought for. After heroic effort and endless falls, by reason of the sinuous sal-lal embracing legs and feet, we came out towards evening upon another sheet of water, some 1100 feet above sea level, where much grass grew and salmon-berries were abundant. We had scarcely made 'camp' here — which name I gave it — when the rain came down in earnest. We heard loons flying overhead in our southeast course, which told us of more water lying ahead and gave prospect of Atluck being near. There was little or no life in the woods; an occasional squirrel and a solitary grouse were all we saw on the way.

**Sunday, August 5<sup>th</sup>** — With the underbrush loaded with wet, and a rain that kept falling more or less all day, we headed once more for Atluck Lake, determined to reach it by lunch, make a raft, and try to get up the northeast end by night. All this we were successful in doing, save that a pitchy darkness came on when some two miles from the end of our long journey and we were forced to camp in a clump of trees near to a stony beach. We discovered the fourth lake — Loon Lake — early in the day, in the same line with the others, some 800 feet above sea level and at least half a mile long. It has a crescent shape and is clear cut around its banks. Reaching more open timber, we clambered up and down in our southeast course, till at last we heard the splashing of the waves and knew that the big sheet was near. A wind was blowing, which, rushing down the valley in which the lake lies, soon stirs up its waters. We came out most opportunely, fairly at the head; as we saw later on in the day, if we had turned ever so slightly further north, we should have had the greatest difficulty in getting down. We sought diligently for the river which our map showed flowed out to the sea from the head, but though we walked around the entire head, not a trace of one could be found. Some little creeks run in, but it puzzled us sorely to understand how an official chart could place on record so great and dangerous an error. We were well pleased with the lake; its is beautifully situated, some 600 feet above sea level, the mountains on both sides being very rocky and precipitous, the water very deep, and two islands adding to the picturesque effect. We saw loons and beaver, and there seemed a quantity of trout. It was with no small pleasure that we stood by its shores, for we had worked hard to reach it, the distance from the Sound being but twenty-five miles, but we had to cover fifty-eight miles of the roughest and toughest country I have ever yet beheld.

Lunch over, we selected a spot where the best timber lay and at once set about making the raft. By 6 p.m. we had her ready to carry us, made on the same lines as the good Maggie Mac, without nail or rope, and making a hasty supper, started out again to make what headway we could before dark. The wind had dropped; the rain ceased; the water was smooth as could be; there was no tide to worry us and, had not night come, we should have made the record for travel thus far. By the aid of a good fir tree we had light enough to make camp, but our bed was a Siwash one, namely two small hillocks — one for the head, the other for the feet, with a resting place for the hip-bone in the valley betwixt. Rain now came on again and we were afraid of the morrow, for a view of the necessary pass we must have before setting out again for Woss Lake or we might be weeks getting there, climbing over range on range. Our supplies were now nearly out, for from Koprino we had only dared to take just enough for a rapid run, whilst storms delayed us so badly. Flour and rice were gone; cocoa was also a thing of the past; one mess of beans and bacon was still in the larder, and a little elk meat soup and tea. Things did not look very promising if the morrow should be wet, but Skinner's rule was accepted — "Take no care for the morrow; live whilst you can; only never run short of Tobacco!" Of this latter commodity we had enough for a few more days, and so, curling up in our blankets, we slept as if a store was safe at our side and all the delicacies of the season awaited us on the morrow.

**Monday, August 6<sup>th</sup>** — Which way the Atluck waters flow can no longer be an unsettled point. From one official chart with us, there appears a river flowing from each end — a most unusual thing; from another chart, a river from its southwest head, running down to the west coast. This day we found the outlet — and the only one, without doubt — at the north end and flowing north to the east coast. From a slight hill near could be seen, not more than three miles off, another lake, long and egg-shaped, which evidently is the Hoostan,<sup>68</sup> and into this the Atluck waters run, through a narrow and pleasing valley. From thence they enter Anutz Lake, to run on farther into the greater Nimpkish and through it to the sea. That they cannot turn and go to the west coast is evident from the fact that we left the stream — False River — which the chart showed as the river from the lake, at a higher elevation than the waters of the lake itself, and further, there exists a great batch of mountains, round which we would have to make at least a ten mile circuit before getting to where we last saw its broad flow of water. It is quite possible that the river we saw has its source in some other large lake lying southwest of the Nimpkish, and had we had time and food, we should have gone in search of it. We heard somewhat later that Indians reported a large lake as existing behind Karmutzen<sup>69</sup> Mountain, though none had been to see it. A pass across the Island from Alert Bay to Kyoquot Sound<sup>70</sup> could readily be found, first by way of four lakes — Nimpkish, Anutz, Hoostan and Atluck — all joined together by water, then skirting the mountains, as we had done, reach and follow closely False River to the sea. A valley running our way towards where the chart showed Woss Lake to be, giving promise of a pass through the range to the east, well rewarded us for the delay we had been forced to make. The morning broke in torrents of rain and, as no view meant no travel, we had to rest until noon. Then, the rain ceasing, we made our way on the raft to the north end of the lake, and pitching camp thereon — where a fire at some time had burnt up every atom of underbrush — set out to investigate the lay of the land and water. Later on in the day we used the raft again to explore a bay that we had passed, but it amounted to nothing, it being largely beaver work. A magnificent pile of mountainous rock, standing on the east side and almost at the north end of the lake, towering far above every other mountain around and running up into the heavens in four clear rocky peaks, at least 4000 feet high, I named ‘Province Mountain’.<sup>71</sup> We found copper this day, near to our camp on the east side, and it is likely to well repay a prospector to enter here and carefully look over the land on either side of the lake. We put ourselves on short rations today and were rewarded by shooting a willow grouse for supper.

**Tuesday, August 7<sup>th</sup>** — We discovered two large lakes this day, both lying in our course from Atluck to Woss Lake and directly west of the latter. Keeping as nearly as we could to our planned route, with — as we supposed from our charts — nine miles between us and the lake, about three miles brought us to the first sheet of water, which is some three-quarters of a mile in length, and, in its broken shape, a quarter broad. We first knew of its existence by a goodly stream which ran near to our previous night’s camp and which ran through our pass. This river evidently heads the same way as the Atluck waters and either flows into the Anutz or the Nimpkish Lake. I named them Scaife Lake and Creek. Not able to cross the stream, we had either to fell a tree or wade. To save time we chose the latter, and had a deep wash as a result. But when underbrush is heavy with moisture and a rain falling, the amount of wet upon one scarcely matters. Then a stiff climb, and through the timber we could see more water or fog. To ascertain this we descended, and there another goodly sheet of water lay. It is almost a circle and has more open appearance than any we had seen. Its waters flow northwest. I named it ‘Martin Lake’. Our light repast over, we headed again for Woss Lake, and hoped to escape a heavy ridge by skirting a smaller one. But we were doomed to disappoint, for after we had risen

<sup>68</sup> [Hustan Lake](#)

<sup>69</sup> Also spelt *Karmutsen*. Karmutzen is an adaption of the Kwakwala word for *waterfall*.

<sup>70</sup> Kyoquot Sound; however, the early traders spelt it *Cayuquet*.

<sup>71</sup> Pinder Peak

some distance, we could see, through the fog, a great barrier in our path. However, we caught sight, lying to the north, of the Nimpkish, which spurred us forward again. By 4 p.m. we had climbed up 3000 feet once more, but see anything ahead we could not. Trusting that we were now on the direct road to Woss Lake, we made good running down the hill, but a drop of 700 feet brought us to a creek and another climb, which, through the mist, we could not calculate upon, nor now know how much it included. Fearing to be caught by the night ere we could get down if we attempted further, we made camp, though good wood was exceedingly difficult to get and space for the tent was at a premium. Though we had two guns with us, we had seen nothing on the way, and feeling exceedingly hungry, we scraped the flour sack and made 'minute' pudding, which though somewhat lumpy, tasted simply superb. We came across no timber of account, but found strong indications of coal around Martin Lake. Our general course was east, though we had to make a very zig-zag course to get around and over difficulties.

**Wednesday, August 8<sup>th</sup>** — This being a month from the day of leaving the Cape, we set our hearts upon reaching Woss Lake of the Kla-anch River by nightfall. The day was foggy and sal-lal brush thick ahead. Everything was soaking wet and our meals, till we could gain the head of the lake, were not of a kind to put staying power in men — consisting of a cup of tea and soup, both as weak as we dared make them to keep up strength for travel. We started up hill and kept going over and around our mountain of the previous day, till we struck a lake, so rich in lilies that I named it Lily Lake. It lies due west of Woss Lake. Keeping steadily to the east, we came out of the timber, hoping to find the lake below us, but no, a roaring creek swept across our path, with another mountain trying to cap ours for height, between us and our aim. With a rush we went down, this time no great difficulties meeting us, though we swung from tree to tree and let ourselves down by bushes. I never came down 1000 feet quicker. After resting for dinner (!) by the creek, we soon took up the march and kept our elevation for some hours. Then more streams intervened, which meant going higher to crawl round them, or lower to cross them. Their sides are, as a rule, so precipitous that to cross them is utterly impossible. Bending to the north, we came down and towards 6 p.m. we could see the valley in which the river and (from the chart) the lake lay. We were now leaving the heavy timber and entering small and closely compacted saplings. Often it was hard to get ourselves and our packs through, but fighting our way, we at length came to within 200 yards of the river, with the lake (so the charts showed) some mile or two to the east. We had had quite enough for one day, having been ten hours on the trail and falling 2000 feet, without counting the climbing. Making our humble repast, and knowing that breakfast meant our last meal, we heard the sound of an axe and of someone talking and splashing through the water up the creek. Skinner sighted a Siwash and brought him into camp. He was a stalwart fellow, pleasant and could speak English well. He told us that he and two others were camped just below, on their way beaver-trapping up the Davie River, a tributary of the Kla-anch, and that we were twenty miles away still from the lake, despite our charts. We told him of our condition and asked to purchase any supplies they could spare. He said he would let us have some flour and rice at a price, and would go down with one of us to see his chums about it. Incredible to white man as it would seem, his chums stood out against us having anything. We were ready to pay heavily, but a bad-looking, beetle-browed fellow seemed evidently ready to cinch us. Disgusted, we left them, and our visions for a brief half-hour of a square meal were gone. One hope, however, they gave us. They said they had passed a canoe an hour before, filled with supplies going up to our party at the head of the lake, but they had camped a mile below and would be along early in the morning. Our three men, they said, were awaiting us at the appointed place and, as we had taken so much longer coming across than they had expected, they had sent for some more supplies. This was good news, and with hope in our hearts, we made a big fire, smoked our final pipe and turned in to rest, determined to get up early to intercept the crew and grub. We crossed during the day one broad stream with no great fall, which runs into the Kla-anch; the others were torrents from the mountains. No game was seen, save a few bear tracks and an occasional one of deer, all old.

**Thursday, August 9<sup>th</sup>** — A day of experience, and not the least, a day of sunshine and warmth, after much rain and cold, as if to betoken that the worst of our journey was over. Rising at 5 a.m. we lit our fire, made our tea, and then in turn went down to the riverbank for an hour's watch, to see that our men did not slip by. Slowly the hours passed, our eyes upon the bend of the river. Magee had a hook in his pouch, with which he tried to catch the wily fish, but they would not rise to the occasion. Skinner finally took the gun, and though there was but smallest chance of seeing birds or deer, started down the river and thought perchance to meet and hurry up the boat.

Five hours had gone and no boat yet, but we knew that poling took long and the rapids were heavy. Suddenly a cow-horn rang out below the bend. It seemed as if it could not be really true, but long and loud it rang, and then shooting forward came the black, snake-like thing, four men poling as if they were in for a race. They had seen Skinner below and had learned that we were above. They so little expected to see human beings that they took him to be some wild man of the woods; a life such as we had led does not tend to give a man an urban appearance. Then they could scarcely believe that it was the party which had actually accomplished that walk across the Cape, for it seems that most people up north thought that we should never get through. All that Skinner asked was the simple question, "Have you any grub?" to which came the query, "How much have you?" "A little pinch of tea and some salt, with appetites sufficient to eat a horse and chase its rider," was the answer. Drenched by their river work, the good fellows only thought of us, and not till we had eaten as we never ate before did they begin to dry themselves. Then we learned many things — how our men were waiting us since the 2<sup>nd</sup> at the head of the lake; how well they had carried out their errand; how the boat that we had come across was completing the stores sufficient to carry us through to the end, with four more men added to the party as packers, for everyone saw that without provisions in plenitude, we should never reach Alberni. We made them stop for their lunch whilst we put our things together, and then, as the boat was heavily loaded and the river was falling rapidly, the two men walked along the river bank, or just within the timber, whilst I became part of the cargo. I found that large as was the canoe I was in, there was a still larger canoe above. How it got up I could scarcely understand, for the work that these men did that afternoon for five good miles was wonderful. None but trained hands could attempt the work. Paddles lay useless, poling wherever they could, with the water rushing hard against them, then the hills of water tearing over rocks that lay before them. They dashed at them, never at fault; it seemed as if this rock must crush us in as we shot up to it, then the leader's pole dived low and we shot around it untouched. Into the rapids the men plunged up to their waists, sometimes even to their armpits. They seemed perfectly at home in the water. Each seized a thwart and with a "Heave ho," "Now then all together," "Once more," we were through and into smooth water again. Sometimes so strong was the rush that ropes had to be taken, and then I was permitted to take a hand. Below us they had had to take out all the cargo and even then had hard work to pull her through. One hundred and thirty rapids from the mouth of the Nimpkish to the entrance of Woss Lake and by 5 p.m. we had but thirty left as we pulled up at the forks of the river, where the Kla-anch and the Woss Rivers meet. We soon learned why we had struck the river and not the lake. Had we not come down, driven by the gulches and weariness, but kept on to our east course, we should have had at least two more days' travel, and then — for I think we would have got there even if my boots, hanging by threads, had had to be eaten — found ourselves on a ridge of mountains at the foot of which lay the lake, but which would have been almost impossible to get down. For Woss lake, instead of being nearer Atluck Lake at its northern end, as we supposed, is very much nearer at its southern end, and instead of nine miles, it is far nearer nineteen. According to the chart, we had not gone a yard out of our way, but we could not tell the chart was wrong, and came near to paying very dearly for our ignorance. But all's well that ends well, and we had found genial friends and good supplies and a way up to the lake's head by an easier mode of travel. The Kla-anch is by far the largest stream we had seen, though its width is not so great as the strange 'Dry River', which for miles runs underground, leaving evidence of some period in the year of bearing a greater volume down to the sea on its broad but now waterless bed.

Very naturally, I looked eagerly for the morrow, when I had so much to learn and to decide our future movements. I cannot forget to add one comment on one, Will Mather, who is but a boy in years. It was wonderful to see him working alongside of grown men, never flagging for one instant, quick as any of them, never flinching, though the waters almost covered him in places, as plucky and strong a boy as any father could wish to call his own.

**Friday, August 10<sup>th</sup>** — Before 7 a.m. the canoe men were at it again, a stiff five miles lying before them on the Woss River before the still waters of the lake were reached. This short river seemed to be but one continuous rapid. There was more walking in the water, by far, than poling. The thirty rapids had to be tackled and in three hours we were at the entrance of Woss Lake, drying up and getting an early lunch. The river winds east and west, some of the lands on either side being very picturesque, though closely wooded. We entered the lake under exquisite conditions. The sky was cloudless and azure blue, the waters like a mirror, and every mountain stood out clear against the sky. The length of the lake is not given correctly on the chart; it is not more than ten miles long, nor is its general course properly marked, for it is not northwest and southeast, but north and south. It also has a peculiar head, turning almost abruptly into a hook-shaped bay, and it was here that camp was made. The mountains on either side are not so forbidding-looking as on the Atluck, but Palmerston looks in a lordly way down upon it from the north, whilst Rugged Mountain with its double cascade and beautiful glacier — its Indian name, the “Kowse” — gleaming green and white, keeps watch from the south, the lake waters lapping at its foot. Rapidly we glided along, looking forward to surprise our party, who had, of course, no knowledge of our coming. They did not expect the canoe before Saturday, and as to ourselves, we were supposed to come another way. Gaining the last turn, we suddenly let fly, rifles cracked, horns blew, tin pans rang again. They could not believe their eyes and ears till they had grasped hands and saw remnants of well-known and decent clothes. We were soon ashore, on a sand spit, where two tents and a shack for their provisions stood. When we had put up our own and the canoe men theirs, we looked like a logging camp. There was much to be heard and said; what they had heard has already been told; what we heard has been given under the name of *Loriot's Lieutenancy*.

**Saturday, August 11<sup>th</sup>** — At 8 a.m. I held parliament, the members of the house sitting around, I with maps and papers spread before me on our bark table, slated on a box put up on its end. We traversed the whole situation and clearly saw that the time limit and the lateness of the season were hopelessly against us. We could not, unless we lived on air and flew, make through the heart of the island under three months more. I felt that we had fairly fulfilled the intent of the expedition, viz., to lay bare something of the widespread unknown regions of the island, so decided that we should at once commence to pack supplies over the divide and cache them there, then when the rest had gone, break camp and move beyond the cache. Whilst packers were busy, I would endeavour to learn of the region of the Tahsis to the south. We would then work down the Tahsis Canal, and there building a raft, if we could not secure a canoe, float down to Nootka Island, where lies Friendly Cove and Indians; there get canoes, if not already obtained, and make along the coast, putting in if necessary where aught of interest showed up; then paddling on till we should enter the Alberni Canal and reach the settlement. From thence, foot it once more into Victoria. Should we fail to get canoes at the head of the Tahsis Canal or at Friendly Cove, we would push on to Hesquiat,<sup>72</sup> where there was almost a certainty of getting what we needed. This was agreed upon by all as the wisest course to pursue, and all were ready to throw themselves heartily into it, so that the winter should not catch us, the agreement should be kept and we come in on time. After an address on the Sunday labour question, and explaining the terms to the new men, I dissolved parliament and we went about our work. Four packers took flour, four others accompanying as axe-men to cut a trail, with Magee as guide to locate

---

<sup>72</sup> An adaption of an Indian word meaning *to tear asunder with the teeth*.

both trail and cache and future camp. They returned about 6 p.m., having accomplished their task in a satisfactory manner. They reported the sea as clearly visible from the cache and the way to get down seemingly of comparative ease, the forks of the Tahsis to be our next camp. Two went hunting and found on the south side of the lake no game, but three lakes some 2000 feet above sea level, one entirely frozen over though half a mile in length. I named them from the men who climbed there — Hammond and the (2) Mathers Lakes. Others stayed at home sorting the supplies, arranging details and getting food ready for the hungry ones. The evening being very blustering, we kept close to our tents with a bright fire glowing before each.

**Sunday, August 12<sup>th</sup>** — To make time, five men were sent forward to the cache with fifty pounds apiece of supplies, and were back in time for lunch; the rest fell to darning and repairing, writing letters and resting. The midday meal over, the rest of the day was spent as those who know Sunday camp life well understand. Photographs of the family group were taken around the canoes and about the campfire. Arrangements were completed for breaking camp early in the morning.

**Monday, August 13<sup>th</sup>** — The canoe men were off by 7 a.m., then down tents and packs made ready. Our canoes not being able to hold us all at one time, some went ahead, the rest following and caching the canoe, covering it with brush and doing our best to keep it in preservation for the use of those who should come after us. If only Siwashes do not purloin it, it will be extremely useful to have a boat for use in this beautiful mountain lake, for surely the time will come when parties will find their way thither for summer outing. The travel by way of the lakes is interesting and picturesque, and even by way of the west coast up the canal and the Tahsis River not over difficult for strong limbs. We made over seven miles by 4 p.m., reaching the top of the divide, a 1300 foot climb, by noon, and having lunch at one of the two streams that in the valley beneath become Tahsis River. In places the trail led up so quickly that we were as flies crawling up a wall, but though loaded well down, we all got up and then had a clear run to the level of the sea. We fell 1500 feet in about three hours. Shortly after restarting, we struck an Indian trail mixed up with an elk trail — of which there was sign about, also of bear and mink — which led straight down the backbone of a ridge with a deep canyon on either side and towering mountains beyond. Doubtless this trail goes over the same divide as we had crossed and is the way that the Indians of the west coast have of getting over to their Alert Bay fellows. We had missed it, but had not lost much through doing so. The way we pushed ahead down the valley spoke well for the trail, though we had to cross and follow streams in many places. We took to the rocks for some distance. The valley of the Tahsis is not long, but the great mountains shutting it in closely give it a very picturesque appearance. Our artist longed for delays, but time was precious. One view of Woss Lake from the mountaintop — the last glimpse of where the party had met again, and the stay at which had been so interesting — we were able to take. Our chart shows the Tahsis River as connecting with the lake. This, of course, is entirely wrong; its streams head up the mountains of the lake, one at least coming from the Mather Lakes. The timber in the valley is not of very great value, but evidences of minerals are to be found in plenty. The cache having to be brought down, I halted in an open glade at a distance that the supplies could be got at and brought down in a day, and as we thought, but later found out to be wrong, some five miles from the canal and half that distance from the full stream of the river, which near camp had now become a fair-sized stream.

**Tuesday, August 14<sup>th</sup>** — Sending most of the party back to the cache to bring down the remainder of the supplies, I, Magee and Cartmel went ahead to look over the way and see what the valley contained in timber, game and mineral, and whether there was any chance of getting into the district to the south without climbing the great ranges that were hemming us in menacingly on three sides and which would demand too much of our time; we found a wide valley cut up by a multitude of streams that together formed the Tahsis. We tried the brush and we tried the water, and by lunchtime had decided that the latter was the preferable, indeed the only way most of the time, as the growth of the salmon-berry and other bush made it a fighting match at every step as to whether man or vegetable

should conquer. There is some large timber in the valley, and there must be a mighty volume of water at certain seasons for the banks are high and the great trees lying in the bed of the river evidence its strength. The ranges on either side rise very abruptly from the valley and some splendid peaks tower up into the sky, especially one which stands at the very head of the canal, of bare rock shooting up like a spire some 4000 feet, named Tahsis Mountain. It was a very fine day, so that the usual clouds were lifted from all the tops and the view of the peaks was exquisite. Desirous of reaching the saltwater, we trudged on without getting there till it was nearly time to return if we were not benighted. Thinking it just possible that there might be a rancherie at the head of the canal, which would expedite matters extremely should they possess a canoe on the spot large enough for us, I requested Magee to go on and find out, arranging with him to meet us on the morrow with canoes or without, and leaving him with our lunch pail with one mess of beans and bacon, we set our faces campward and he, with his usual readiness, went off into the unknown. Fording the river and wading straight up it, sometimes near to our waists, we arrived at camp just as the other party was coming in. All down the valley were signs of Indians, as the traps — or dead-falls — for bear were numerous. We cut one to see how it worked and the wonder is that after the mass of stones and heavy timber has fallen, there is anything left of the animal worth preserving. We thought, when in our blankets, of Magee, perhaps hungry and lying in the open, but as it happened, he was in clover all the while.

**Wednesday, August 15<sup>th</sup>** — Starting in good time with full packs, and leaving Rudge, who had the misfortune to break one of his fingers, in charge of camp, or rather that part of camp that had yet to be brought down, I headed down the river anxious to get to Magee.

Making our way as best we could, we had been out an hour and a half before a bend of the river brought us face to face not only with him, but with two river (small) canoes and four Indians. The explanation thereof followed. Magee had not gone more than a mile before he came to the mouth of the river, which empties out in two places and where there is much long grass land, espying a rancherie a short distance off, but not accessible save by climbing precipitous rock. He was caught sight of by an Indian lad, who came over in a canoe and landed him among a gaping crowd. There were about twenty in possession and learning of his want of canoes to bring a party down, they assented to his proposition and promised to go up in the morning. They asked with some concern if there were any Chinamen in the gang; whether they would have refused to help us if there had been is still a moot point among us, but the query itself was strange. They seemed, however, relieved to know that though we represented many nations, we had no 'pig-tail' with us. Not only had they river canoes, but they had two, each capable of holding a dozen men and a ton or two of stuff. One of these he provisionally secured. Acting very differently from the Quatsino Indians, they seemed only too desirous to make him comfortable. They cooked him bannock; they gave him a bed; and the boys would have him go and see them swim and dive, both of which they did extremely well, leaping off a rock thirty feet high with delight and skill. About the same time as we, they left to meet us and had just arrived where two log jams — of which they had overcome two — prevented them going further, when we came upon the scene. I sent all the party back, Magee alone staying with me, to bring all the rest of the supplies down and meet the canoes at 4 p.m. at the same place. Then putting all the packs into the tiny canoes, the Indians commenced poling down the swift stream, we walking. Two old men and two lads were the pole men and extremely skillfully they did it. Twice we had to carry everything, canoes as well, over jams, but a short half mile brought us to where they invited us in, each in a canoe, and from thence we floated down under the most enjoyable conditions, save that to me it seemed inevitable that a collapse must come as we shot under fallen trees and ground over stones with the canoes so loaded down that a few more pounds would have sunk the little crafts. Our arrival was looked for and all the inhabitants turned out; their attire was most grotesque, but their attitude most friendly. One could see that some influence extraneous to their Indian nature had been upon them. I presume that the good work done by the Roman Church at Hesquiat is at the bottom of it. They brought us wood and water; they found us poles for the tents. They did not hang around and poke

their fingers into our possessions, but they went their own way after seeing that we had what we wanted. In all our trading with them, they did not show that usual Siwash habit of ‘grab’, but asked a fair price and even made a ‘potlatch’ of some things. I arranged to purchase one of the warships, together with some of the finest paddles any of us had ever seen, and all at a most reasonable price. Their attention to our guide was not forgotten, and the kloochmen were profuse in their thanks. After their meal, the same parties started again up the river, and we, having many things to see to, thought that it would be alright to send them without a guard, but here, alas! their Indian nature showed itself. They evidently argued that as we had been met in the morning coming steadily down, the party above would again do the same and continue on downstream until they met the canoes. But I had given orders that where we met before there the men were to wait, and had thought that we had got the knowledge into the heads of the canoe men. Alas! without us they deemed it too much work to carry the canoes over the jams, and so whilst our party was waiting above, they coolly lay down to smoke and play and wait likewise before the first jam. So both parties might have waited till nightfall had not three come on down to see what was the matter. The aspect of things quickly changed and the canoes lifted over the obstacles and then sent forward. The three continuing downstream reached camp, and the rest helped the polers; themselves walking at length, as darkness came on, arrived in camp, where a good warm supper soon refreshed them and absorbed all memory of a fatiguing day. The head of the Tahsis Canal is very pleasing to the eye — mountains on either side, with the low pass of the river in the centre and back of it standing Mount Tahsis, the same beautiful mountain of rock we had seen the previous day. The Indians report and can show evidence of very excellent marble close by the rancherie. Their specimens of ore were not thought much of by the experts.

**Thursday, August 16<sup>th</sup>** — The big craft, old but seemingly staunch, was with the early dawn brought over and made ready for its cargo. It requires some knowledge to arrange such when heavy seas are looked for, and ten men are the complement. The weight of men and supplies exceeded a ton and a half, but it rode the waters well and was not seemingly overloaded. Bidding farewell to our friends, we at once took to the paddles, with the tide and wind both against us. Relays of an hour each took us rapidly down the canal, which is much wider than we expected and well wooded on both sides. We were soon alongside of Nootka Island and pushed on till we came to a rancherie, where two kloochmen and a Siwash held possession. Whether they were scared at such a band coming down on them or not, they were profuse in their wishes of ‘good-day’ and goodwill, and the old fellow, after retiring clad in a blanket, came back arrayed in white man’s attire, minus hat and boots. Lunch over, which we took on the little beach, and our artist’s work over, we took to our paddles again and crept on, with the tide now in our favour, but a headwind, till time to camp. Rancheries appeared in several places and islands in plenty; the canal was steadily widening out and the waves bigger. We ran first into Kendrick Arm and then into a cove, Mariner’s Bay, <sup>73</sup> well sheltered, after a full twenty miles of paddling, and finding there a shack and water near, made camp for the night. Three of us preferred a tent, the rest sleeping where we cooked, inside the dingy-looking house. From the canal on, we found the Admiralty chart of the greatest value and interest, and could place ourselves as to position at any time with the utmost accuracy. With so excellent a guide, and Magee transferred into a navigating lieutenant, the waterway was easy, Magee having traversed before from Friendly Cove to Barclay Sound. The travelling promised to be still better, as experience of these waters teaches men many needful points. We saw some good timber along the canal, but nothing special in the way of stream or river. There were plenty of salmon about, but we had lost our spoon baits. We also saw a fair number of duck and snipe, but these kept at a safe distance. A heavy fog lay over the landscape, so that we could discern not the ranges that lay back of the canal banks. We had hoped to reach Friendly Cove by night, but not liking a late camp, I stopped short some five miles from it.

---

<sup>73</sup> Possibly Plumper Harbour

**Friday, August 17<sup>th</sup>** — The morning broke with heavy mist, then to rain and wind which continued all the day. We cut a mast and had the tents ready for sails, but could not get any save a headwind, and a stiff one at that. Paddling for a couple of hours, keeping close to shore, we reached Friendly Cove, well-named, as outside the waters of the Pacific Ocean lashed themselves into a fury, whilst inside they lay like a millpond. We found a dozen houses, a little church and a store, kept by a white man named Goss,<sup>74</sup> which had been running about four months. The chief came down to greet us and showed us much civility. He and a few others understood Chinook, so that we could get our wants attended to. We needed oars and knowledge of some spot where shelter could be found by evening. He took us across the spit which forms the cove, and from Yuquot Point pointed out to us the way through the rocks of Escalante Point<sup>75</sup> to the spot marked on the chart as ‘good for boats’, known to the Indians as Pacista Cove. Then he found an oar, but we needed more. However, going to another house, painted a brilliant red, we secured the only other oar in the cove and had to be satisfied with only a pair. The Indians had some months ago found a boat, with oars, floating up the sound, evidently belonging to white men, and had brought it into port, but not long before we arrived, some men in a sloop had camped at the cove and carelessly let their fire run until it set fire to several houses, burning them down and with them, boat and oars. The ravages of the fire could be plainly seen. We were satisfied as to totem poles of the west coast, as a large one of a man and a whale adorned the front of our house, whilst opposite another, there was a remarkably clever one of a Siwash lad standing on the shoulders of a man sitting down. This lad was well-carved and his face bore a broad grin. It is life-size and we took it, till we were in close proximity, to be a living being looking at us. A relic of olden days was seen at Friendly Cove in the shape of an old Hudson’s Bay cannon, which lay in front of the chief’s house, no longer dangerous nor needed, now that the head of the rancherie wears elegant grey trousers of the latest style and boots like our own good “K’s”.<sup>76</sup> The chief’s house is adorned with the sun of an enormous size. The entrance is in the centre of the orb, reached by steps. Two hideous-looking fish are painted thereon, and above the door another fish, probably a crab. The residences in the cove are houses of immense size. We measured the chief’s and found it be 120 by 70 ft. Inside it is like a great hall, benches round the walls, with sleeping mats in some parts. The owner showed us some otter spearheads of steel that he was working on when we arrived, and very beautifully they were done. His coat for state occasions hung nearby. It is one of the finest bear skins I have ever seen. It has no sleeves, but it is thrown over his shoulders and tied with a thong at his throat. His canoe is a monster and most elaborately painted. Goss reports them a quiet crowd, at times much more numerous than when we came on the scene. They congregate to over 300 when not engaged in fishing. Two canoes loaded with dogfish came in as we strolled along with the chief, and he told us that where we should camp at night, Pacista Cove, where a kloochman and a blind Siwash were busy with halibut. Like as with the Tahsis Canal Indians, we met civility from all and freedom from inquisitiveness. Their friends further north should learn a lesson from them. Goss told us of a visit not long ago paid by these same Quatsinos. Knowledge of their coming being given, the Friendlies — known also as the Nootkas or Yuquots — arrayed themselves in full dress, their largest canoes being brought into use, and everyone dressed alike with garment striped black and white. A man in the prow of each canoe beat a drum and at each stroke, the paddles struck the water, the canoes thus bounding forward by great leaps. The Quatsinos were ahead of time and as the final preparations were not completed for the guests, the Friendlies took them to camp some little distance off. Early next morning, all being ready, the whole band entered the cove, first the Friendlies, fifteen canoes abreast, kept in line by men in each prow holding hands, drums beating, flags flying, firing and singing. Then came the guests; arriving near shore they went through ceremonies that kept them full two hours. A large canoe was lifted upon the heads of thirty Indians and into it first climbed the chiefs,

<sup>74</sup> John Goss, manager for Stockham & Dawley, traders

<sup>75</sup> Burdwood Point

<sup>76</sup> Possibly a mid-calf, lace-up army boot.

then others, one by one, to make their speeches. Goss was invited, but declined the honour. This over, all landed and merriment held sway. Being told of caves where they buried their dead, some of us entered one. A long chamber six foot broad by twelve feet high, and there, in boxes piled one on another, were the bones of the departed. There are three of these in the cove. The Indians claim to have one of value on the reservation, but are very chary of letting white men see it. Marble is good and, not far off, a white man is engaged in quarry work. Lunch over, we took to our canoe again and went out to meet a stiff headwind and heavy swell. By hard rowing and paddling, we reached in two hours and a half the Escalante Rocks, having in so doing crossed the mouth of the sound and tasted of the roll of Pacific waters. The rocks from the point to Hesquiat are numerous and dangerous; many are blind and a great surf rolls and roars all along the coast. Keeping out to sea as far as we could with surety of seeing our shelter through the mist and rain, we ran down till 5 p.m., when we espied a little smoke on a green patch ashore. Heading for it, we found the shelter, not much at that, but still the only place along the reefy coast, not twenty yards of quiet waterfront and this all of rock, with a sandy beach a little distance off, but such a heavy surf rolling that effectually prevented us from landing. We got into shelter, jumping out onto the rocks, unloading and then carrying the craft over the obstacles until we reached a pebbly beach. Here we found the Indians busy drying halibut; the stench was awful, but we had no choice but to bear it. On the grass land, where we learned a white man had cows and horses, and which might have without much trouble been made into a farm, we made camp, built our fire and had halibut for supper, the rain pouring down and the surf roaring as it plunged over the rocks, which seemed everywhere in sight.

**Saturday, August 18<sup>th</sup>** — We essayed the task of rounding Estevan Point and failed. Seeing the heavy work ahead of us and desiring to make sure of the canoe not splitting, we put in a couple of ribs, then carrying it down, as the tide was pretty well out, we brought our goods and chattels and, heavily laden, set forth. For over two hours we battled with wind and tide and a heavy choppy swell, but could make no headway. We had to go out to sea to escape the reef which runs out a great distance from the beginning of the point, but the sea was steadily getting heavier, and even had we been able to round this headland, there was still a worse one waiting us, known as the ‘Hole in the Wall’, and after it, ‘Boulder Point’. Both these are more dangerous than the first, so after doing our very best and knowing that discretion is the better part of valour, I decided to go back and wait for a better chance, lightening the load also in some way and putting in still more ribs. The old craft stood the tumbling about splendidly, but apart from shipping seas, leaked rather too much to be pleasant. It had lain by too long, but was still good enough for us if we watched and properly repaired the gaps. We made camp in the same spot and busied ourselves the rest of the day cleaning up our guns and things, which the water had somewhat damaged.

A Siwash coming on the scene towards evening to visit the old couple, still busy with their fish, I learned from him that there was a cattle trail from camp to Hesquiat and distance not more than five miles. I decided, therefore, that I and some of the party should walk across, which would lighten the canoe and let me see this neck of land at close quarters, and letting the crew rest over Sunday, have them come round on Monday or the first available day. The whole coast of Nootka Sound seems, both by chart and what we saw, to be a mass of rocks and reefs, dangerous at all times, but especially so with such weather as we had. The fog was heavy, so that we could not at times see the shore at all. Halibut hanging so near to us that we could not resist having another supper thereof, so I traded with the kloochman, giving her some tea and boiled rice. What all her gibberish meant, I could not learn, but anyway we secured what we wanted and relished it exceedingly.

**Sunday, August 19<sup>th</sup>** — A bad day as to weather, but notwithstanding, I and three others set out for Hesquiat, leaving the rest to while away their Sabbath. We thought perchance to hit the cattle trail,

but it was not a fair and square one, but very many, all broken up. The priest at Hesquiat <sup>77</sup> owns a considerable amount of cattle, also some horses, and these wander about, even to where we were camped, after food, which is fair in summer, but uncommonly sparse in winter. We had a tough fight of it most of the way, for when we had conquered the sal-lal, we came upon open marsh land, which let us sink in places nearly to our knees. The rain came down steadily and the bush was loaded with wet. So were we, for we were wet to the skin all day and our boots were filled with water. We passed one fair-sized creek running north, and we struck the survey line of the Sayward timber limit running east, but our course was east-southeast and this finally brought us about a mile from the rancherie, but quite close to a store run by an Austrian, Antoine Lukovitch, <sup>78</sup> and his wife, who received us most cordially. They could not imagine where we came from, coming overland as we had. The supposed cattle trail, we learned from the storekeeper, was as we had found it to be — a phantom — and the Indians rarely, if ever, cross, preferring waiting for days for a fair wind and canoe to making a shortcut through the bush. Anxious to get dry and be near a good larder — for we had brought but little provision, not wishing to struggle along through dense bush with heavy packs — we decided to make camp near our newly-found friends, who lent us every assistance. Hesquiat will always be pleausurably remembered if only for one reason — the friendship we formed with the couple that live so lonely a life there, with their three bright little children — Agnes, Hilda and Austin. The harbour is too well known to call for description or comment from me; it came up fully to my expectations. Along its shores appear Indian houses standing alone in little patches of cleared ground, all telling of prosperity and civilization. By reason of weather, we could not see either of the two mountains of the district, Leading Mountain <sup>79</sup> and Round Saddle.

**Monday, August 20<sup>th</sup>** — An incessant rain, with a wind that raised the waters even in the harbour to foam, effectually prevented any attempt at progress by either party. We at Hesquiat remained under the shelter of the store and passed the time as best we could. I learned from Luckovitch of a lake that in winter attains to some mile in length by half a mile in width, Hesquiat Lake, lying behind the Indian village, which is an excellent place for duck, in season. They come in multitudes, as do geese; the latter keep, however, more to the upper end of the harbour itself and afford a steady feast to the Indians, especially during the months of October and November. At the head of the harbour, Boat Basin, there runs a valley in which are two lakes, one so near the sea that at high tide, saltwater enters and widens its extent; the other is a little further back. They are both of fair size, about a mile and a half long by half a mile broad. Back of Round Saddle Mountain, there is reported to be a very large sheet of water, and another between Hesquiat Point and the West Arm of Sydney Inlet. The Siwashes at this rancherie prefer sealing to any other occupation, and some are reported to be fine shots. When at home, they prefer saltwater to sal-lal, so few skins are procured by the trader.

**Tuesday, August 21<sup>st</sup>** — The weather continuing abominable, it was as impossible for us to go on the water to see for ourselves the lakes mentioned by Lukovich as it was to expect the advent of the men from Pacista Cove. We, however, sallied forth to the village about a mile and a half distant, walking along the shore and visiting the Roman Church, a pretty structure made almost wholly by Indian hands under the superintendence of the Father, whose long residence of twenty years entitles him to high regard by both whites and Siwashes. The village contains about thirty houses, some of them as good as white settlers could wish for — painted, framed windows and two-storied. Their possessors have given them high-sounding names; the ‘White House’ is well-named, but ‘Windsor

<sup>79</sup> Changed in 1934 to Mt Seghers

Castle' and 'The Capitol Buildings' are a trifle far-fetched. From the village we followed a trail to the 'prairie land', but anyone who has ever seen a prairie would find it impossible to call it aught but swamp. There is a great deal of burnt timber still standing on it. Then we made our way to Hesquiat Lake, but could not get very close to it, owing to the heavy rains creating a swamp some hundred yards all round. It is a fine sheet of water and what is remarkable about it is that it is the only one we could recollect on the island not surrounded by mountains. The land on the peninsula forming Estevan Point is all low, scarcely a rise to be met with anywhere. We could do no more for the day, so passed the time reading and studying the barometer.

**Wednesday, August 22<sup>nd</sup>** — Glorious weather, after such as we had been enjoying, brought the party from their prison about noon. They had a hard pull despite the sunny sky, for the swell was still very heavy. A far better cove was seen near the 'Hole in the Wall' than the one we had been kept so close in, but experience teaches. The previous day, one tent had to be moved, for a torrent appeared on the scene which was highly dangerous to bedding. The men were glad to get away. Putting into a bay for a rest, they learned from a Siwash that a trail ran across from that point to the village, but the canoe needed all hands. Our crew were too tired to make further, though I had hoped to make Clayoquot Sound before night, especially as a breeze sprang up as they arrived, which would have exactly suited us.

**Thursday, August 23<sup>rd</sup>** — Opening finely, we got off early, but the wind being absent, the oars and paddles had to be taken to. We chose to keep outside of Flores Island, for though the ground swell was heavy, the distance round, up Sydney Inlet, meant a great expenditure of time. With much desire we looked for a fair wind when we should reach Rafael Point, Flores Island, that ran furthest of all the islands out to sea and somewhat sheltered us for some twelve miles. The day being clear, we had a magnificent view of the mountains that lay back of a fairly low saltwater range. Peak after peak came in view, running up into most fantastic shapes. One monster had a broad bosom of snow and another nearby it seemed as if painted with red with its rock formation. Back in them we knew lay Muchalat Lake and Gold River, and we realized that it would be a summer's task to get through and properly explore such a densely mountained region. Crossing the mouth of Sydney Inlet and rounding the point, we caught a little breeze and quickly put up stick and sail, but it was only a passing one and after half an hour had left us. Then suddenly there loomed up ahead heavy clouds; the sun disappeared; the wind began to blow stiffly; soon great raindrops fell; and we realized what it is to sail along the west coast of the Island. We were now heading for Vargas Island, hoping to keep outside and so make Clayoquot, thirty miles from Hesquiat, and with a fair wind to even make Uclulet, twenty-five miles further on, in the one day, but we soon saw that the latter was wholly out of the question and the former but a chance, and that nothing was left but to run inside and try to get round Vargas and a hundred rocks and islets. Very fortunate it was that we used discretion. Paddling and rowing, we kept along Flores Island on its western face, looking for a spot where, after six hours' hard pulling, we could take a rest and have our lunch, but nothing showed up. The west coast offers few opportunities for shelter and way ports; it is rocky and a whirling mass of surf almost without intermission. Now the rain came down in earnest and reaching the southeast extremity of the island, we saw a small bay. Into this we turned and beheld a shack and a potato patch, but neither was for us, as the surf was altogether too bad. Spot after spot we tried, then pushed out again to try just round the point. Gaining it, we came into Whitesand Bay, with four large Indian houses, deserted but for a cat that ran along the sandy shore. Thither we pulled and taking chances, one of our precious oars snapping in two at a critical moment, we touched land, sprang out and hauled canoe and supplies safely out of danger. Not a moment too soon, for we had scarcely got our breath when the wind became a hurricane and whitecaps appeared everywhere and big waves dashed upon the shore. We could not have lived in such a sea, for our craft was very rocky and leaked badly. It seemed hardly possible that a day opening so calm and beautiful should in seven hours' travel become so tumultuous. Sunshine and calm, forked lightning and thunder, wind, rain and a heavy sea — this is the experience

in a single day on the west coast, a risky place for travel at all seasons of the year. Not a chance for further progress the whole of the afternoon or evening. We were but ten miles off our first goal, but we could do nothing else save prepare for a wild night and trust that the storm would pass away with the tide. Twenty miles under such circumstances was not bad travelling. One of the features of our camping ground was the unusual sight of a well dug by the Indians, another was the absence of smell, and a third a host of unmentionable insects.

**Friday, August 24<sup>th</sup>** — No holding up of the weather. The rain still strong and dead against our course, the rain coming down in sheets. We were prepared all day long to start at any time, but the hours sped by without a chance. To lay by thus, able to do nothing yet anxious to make up lost time, was exceedingly trying to us all. None were sorry when the day came to an end and as with the evening the wind began seriously to mend its ways, we believed we should get away with daylight. Near camp we found three boxes, ordinary travelling trunks, in trees, each being the burial place of a Siwash, the bodies being crunched up, not even cut to fit.

**Saturday, August 25<sup>th</sup>** — The morning broke fine and with still waters, so by 4:30 a.m. the bugle rang to wake the camp and all were soon busy getting things together for an early start. The Siwashes were already busy fishing, and with their usual curiosity came close to us to see what all those white men meant. Ten miles of paddling brought us to Clayoquot, through Hecate Passage, looking beautiful in its stillness, with rocks and islands dotted everywhere, great mountains on the main islands backed by towering peaks that ran towards where we knew Buttle's Lake<sup>80</sup> lay. Every now and then a rancherie appeared, always well chosen, always well havened. Ahousat, which in early days had 200 inhabitants, now is represented by a single large shack. But beautiful is Deception Channel with New Rancherie at the base of a mountain. This settlement is certainly the most picturesque of all the Indian abodes I have ever seen. Not long after passing this spot, we ran into the harbour of Stubb's Island, where Jacobson has his store. This lies apart from the village, which is across the channel and is a large settlement. Indeed, all around one sees Indian houses and it would seem that Clayoquot sees a much larger gathering of Indians than Hesquiat. Few men were at home, nearly all being engaged in sealing. After luncheon I decided, having compassion on them, to take Lorient and Skinner overland to Uclulet, whilst the rest should sail, and a good sail it appeared likely to be as the wind outside Templar Channel was evidently a fair one. Starting them off, I learned afterwards that once in the open sea, they had all the wind they wanted and made excellent time to Uclulet, reaching there about 6 p.m., having made altogether some 35 miles. Securing the aid of a couple of kloochmen and a small canoe, in which we all had to sit in the bottom, we three had a delightful sail of about 12 miles up Browning Passage, at the head of which was a cutting some quarter of a mile long that led from the head of this arm to Schooner Cove on the open sea. The usual experience with Indian women was our lot, desiring potlatches of all they saw we possessed, and several times ere the journey was concluded requesting to be paid. When we saw them making attempts at stopping before the head of the passage was reached, we took out the paddles and just pushed ahead. The journey to Uclulet we undertook is the one postman's regular beat, and a fine trip it is. There are three large bays, with sandy beaches easy to walk on, Schooner, Long and Wreck Bay. Then a trail leads across for about a mile to the head of Uclulet Arm. Starting somewhat late to make in an afternoon what the post generally takes two days over, we came out at Schooner's Cove to find splendid walking. The whole country near the sea in these parts is low, with low timber but dense underbrush. To escape the headlands we had to take to the postman's trail, which helped us through. The heavy rollers came dashing up on the beach, but we had plenty of room to travel on. We pushed ahead until darkness came on, then found ourselves at the head of Wreck Bay with no chance of

---

<sup>80</sup> [Buttle Lake](#) was named after John Buttle, geologist and botanist from the Kew Gardens, London, who discovered the lake and mapped the area in 1865.

finding, much less of keeping, a trail through the timber. We had nothing with us but a biscuit or two and a tin of meat, no tent and but one cup between us. The night was starlit and lovely, so we built a large fire and laying some boards on the sand before it with a sort of pitched roof over our heads, we put the hours in till daylight as best we could. Watching the fire and sleep are not harmonious things, and we did not feel much rested at 4:30 a.m., when we started again hoping to make Uclulet quickly so as to push on again for Alberni. I found that to sleep on an inclined board, soaked in saltwater and sand, with a rough piece of timber for a pillow, is not conducive to rest. Whilst the feet are getting roasted, the head is freezing with the night air. We made 32 miles this day, 22 in canoe and 10 by land.

**Sunday, August 26<sup>th</sup>** — Unable to detect the trail across the arm, we crawled over the rocks around the point near our resting place to find another sandy beach, then on to yet another, then found a trail that led us to a disused shack in yet another bay. At the end of this was a mass of precipitous rock, which we could not get around and we were forced to take to the bush. Very fortunate this was for us, since after about three hours after our start, whilst making by compass as best we could through horrible sal-lal and morass, we struck the postman's trail not half a mile from the head of the arm, which we quickly reached. "Everything always our way," was Skinner's remark when on emerging from the bush, what should we see but, within hailing distance, a boat with two men in it. This meant a day's journey saved for, as we afterwards found, had we to tramp along the shore of the arm, we should have had an extremely trying journey, broken as it is by sloughs and rocks. Hailing the boat, whose voice should answer but Magee's. The storekeeper at Uclulet had given us the usual two days for the trip, but Magee knew we meant business, so with break of day he with Maloney had thoughtfully started out to meet us and were waiting for us, not knowing exactly where the trail started in. A row of about four miles brought us to the store kept by 'French', where I found the men having breakfast. I gave orders at once to have all ready to start by 10 a.m., which was done, and we found a delightful breeze awaiting us, which took us rapidly up Barclay Sound. Till lunchtime we sped along, threading our way through the many islands that fill both Ugly and Western Channels. Then entering the broad Middle Channel, we lost the wind for the remainder of the day and had to take to our paddles. But the sea was smooth as glass and altogether it was a delightful day for canoeing, despite warmth. Towards 5 p.m. we passed Tzartoos Island <sup>81</sup> and reached the canal itself, making camp in a small bay opposite San Mateo Bay and just below the entrance to Uchucklesit Harbour. We had run about twenty miles.

**Monday, August 27<sup>th</sup>** we made Alberni. Pushing off early, we got the benefit of the tide, but not the wind, though we knew that such would come later round to our side. So strong was it blowing that we had to put into a little cove to wait for it to moderate before attempting to pass through a certain part of the canal, known by the euphonious name of 'Hell's Gate'. This is not so narrow as might be supposed, but the canal twists and winds through the mountains here in such a way as to cause a considerable rush of wind and water. Here the path of the sea is very beautiful, but it is hard to say which is the best where all is so strikingly grand. The depth of the water is enormous in the canal, the chart giving over 100 fathoms for many miles. Steady paddling brought us up some ten miles to a creek just below Nahmint Bay, where we lunched and saw, as we did, that a strong breeze had sprung up in our favour. Making all haste, we got in once more and, putting up sail, had a magnificent run, flying along past Nahmint Bay and First Narrows up to within five miles of our goal. At Copper Mountain we were left by the breeze and soon had a headwind, so variable are these channels among the hills. We were not long, however, in reaching the end, for exactly at 5 p.m. we pulled alongside the wharf and were soon taking in the sights of the little town. It being a very fine day, the Beaufort

---

<sup>81</sup> Tzartus Island

Range was seen to great advantage and Mount Douglas <sup>82</sup> glittered in a rich red glow. Previous to passing Second Narrows, we had sailed by one place well known to miners and all old residents of the island — the creek first known as Fallensby, but now as China Creek. A house stands at the entrance and up its course still go others than Chinamen, for lately discoveries have been made that have set men to both talking and working. The mountains about the canal are just such as promise mineral. We had seen here in the north scarce other than peaked and pointed mountains; here they are rounded and sloping. At the head of China Creek are two mines that are doing especially well and promise much to their owners. The Golden Eagle Mine, which has been worked for two years, assays at the rate of \$80 a ton, and rock twenty feet in on a lower tunnel has gone to \$105. But the King Solomon Mine has done even better, if what I learned at Alberni be correct, as there is no reason to doubt, and richly deserves its name, for its assays have reached again to over \$1000 a ton. I further heard of good finds made by individuals and we may yet hear of great things of this little settlement. In the valleys, especially those running from the lakes to the Nahmint River, there are plenty of elk, and sportsmen will find every accommodation ready to guide them to the proper places for game. I saw in the town some fine elk horns. There are plenty of bear reported around China Creek. The Sumas River is a fine stream as it pours itself into the canal, and not far from the mouth stands the new paper mill, with many natural advantages, only awaiting a market to become a success. There are some 200 Indians in the rancherie hard by the town, and they possess horses and cattle of their own. No totems are to be seen here, but there is one carving amongst the Shusharts of an Indian which stands in the centre of one of their large houses and holds in its hands the great beam of the roof. The Indians are very proud of this possession and claim it to represent their forefathers, and from time to time cause it to give a potlatch, when the Indians gather for the feast from all sides. Arriving in the town, my first request was as to whether pack horses could be obtained. Otherwise, rather than climb the mountains between Alberni and Cowichan Lake, I should have preferred to reach Duncans <sup>83</sup> by way of Nanaimo, because we could have made better time by taking to the road than fighting through the bush. But I found that two years ago, a road had been cut, and a year ago it had been finished to the satisfaction of the authorities, and though not often used, was supposed to be in fair condition, having some months previously been passed over and fallen timber, then found, removed. This was good news, and as it happened that Pinkerton, the possessor of pack horses, was in town, I was soon able to make arrangements to have horses ready for me in the morning. These, with the men, would carry all the stuff and we could thus make good time to the lake. In our short stay at Alberni, I was much struck with the evident future of the town, the enthusiasm of its inhabitants and the general look and tone of prosperity that pervades the place. I could have wished to have more time to spare to go into the settlement and see once more good land, after months of travel where arable land was utterly nonexistent.

**Tuesday, August 28<sup>th</sup>** — The delays of travel are many and tedious. The horses arrived two hours late, then putting on the packs threw us still later, so that it was after 8 a.m. before we bid goodbye to our new found friends and started up the Nanaimo road for some six miles to where the Cowichan road turns off. It was a roasting day, but once in the timber it took a cooling turn. At the switching off place, we found written on a tree that we had thirty-two miles before us. This was staggering news, for we had heard in Alberni that the whole way was but twenty-two miles. As a fact, there seemed utmost ignorance of the length of the road in the town, but twenty-two miles seemed to predominate. We found that the traveller had the true measurement of it, and that to go from Alberni to the lake means a walk of a long thirty-eight miles. For the whole of the way we found what might best be called an unfinished wagon road. There are stretches of miles where a buggy might be driven with ease, then again where it would be utterly impossible. We had but two difficulties to overcome

---

<sup>82</sup> Douglas Peak

<sup>83</sup> *Duncans* or *Duncan's Station* refers to William Chalmers Duncan's farm; subsequently called [Duncan](#).

the first day, as we covered the first ten miles of the way — one a landslide, which left only a few feet for the horses to tread on, another a tree which had so inconveniently fallen that no way but an extremely difficult descent and climb were left to us. It was a road all the way and through easy country, though we reached an altitude of 1800 feet during the afternoon. About 5 p.m., arriving at a very suitable place to camp, we rested, intending to finish the journey the following day with an extra effort, the promise of a clear road being so good. The smallest of the pack horses showed the greatest and most remarkable intelligence, evidently being an old hand at the work.

**Wednesday, August 29<sup>th</sup>** — Sending ahead Magee and Cartmel to reach the lake and try to obtain canoes, or else build a raft to take us down, I and the rest of the party were off by 7 a.m. with full intent to camp at eventide by the well-known sheet of water ahead of us. We made gallant endeavour, but twenty-two miles is a long way, especially when one finds the road becomes but a trail for the best part of the way and fallen timber blocks the way for miles. We climbed for three hours and reached an altitude of 2700 feet, then came down a very steep place and struck the Nitinat River, which the road follows for a great distance until the river switches off to run down to the west coast. It was early in the afternoon when we came to the jams and then travel was very slow. The axes had to be brought into play and devious ways had to be arranged to get around what was unsurmountable. The horses leapt many a log that to us seemed impossible that they should even attempt. We gave them rests, then trudged on, getting lower and lower until we expected to strike a long, low valley to the lake, when suddenly, some eight miles from the goal, the trail — for road it cannot be called and much money will be needed to ever make this part into such — turned upwards. It was 5 p.m. and still we thought we could make it, so up we went, cutting our way through till we reached the summit, when windfall after windfall stretched across our path. At last we came to one jam worse than all the others, and as it was 8 p.m. and pitch dark, we could not see either what to cut at or how to get round. There was nothing for it but to stop and put in the night as best we could. Magee had left a note on the way to say that they would get through, and at another place we came across evidences of Cartmel's rifle in the shape of a black wolf, with a note nearby asking us to skin the handsome beast as they had hurried forward. They had come across two wolves walking toward them on the trail and had got to within fifty feet of them. We were so tired with our nineteen miles' fight that without ceremony, we ate what we could more quickly get at, and then laying out our blankets on the trail and hillside, had soon as sound a sleep as any men could wish for. For myself, I selected a spot between two roots of a great hemlock and found as cosy a nook as any resting place on the whole two months' trip. Some of the party saw a very fine buck very close to the trail, but the men were unfurnished with guns or it might have helped out our larder and been very tasteful to at least three of us, who for several weeks had not tasted fresh meat. Some five miles from the lake, a bridge had been washed away; this compelled the horses to go into the river and clamber up a very steep bank.

**Thursday, August 30<sup>th</sup>** — With break of day we were at work determining not to breakfast until we had covered at least three miles. For over two and a half miles, it was one continuous windfall. It would have been impossible to pass along in the dark. Little by little we crept along, the horses tiring considerably. When within a mile of the head of the lake, two men came on the scene. They were trappers going to the Nitinat to locate beaver work for the winter, which was correct, and told us that Magee and Cartmel had arrived the previous evening at 5 p.m. just as they themselves were arriving on a raft they had made to come up the lake. This was most timely and helpful, for not expecting us to camp on the road, my men had taken but a small lunch and were preparing to cook a squirrel and tighten their belts till we arrived. The raft was also just what we wanted, as Magee and Cartmel went off very early down the lake and soon most fortunately saw a Siwash and a klooch in a canoe fishing. It appears that 'Charlie' is the last of his race, all his tribe gone and his children dead also. He has the lake to himself and has left it but a few times in his life. Hailing them, it was learned that a steam launch might possibly be secured, but it was twenty miles down. After a talk over the situation, Charlie kindly agreed to take the party down in his canoe, together with two others that he possessed

and were cached close to where the trail came out. So that when we arrived, we had not more than begun to get breakfast, about 9:30 a.m., when the party was once more together. Whilst the canoes were being prepared for their load, the men took the opportunity for washing clothes. The manner thereof would astound many good housewives, for they went into the lake with their clothes on and soaped them there and then. Well in the afternoon we set out, the water still as could possibly be, the Siwashes catching some very fine trout as we sped along to Captain Warburton's pretty location in a bay where the lake is widest. No one being at home, I took the liberty of camping there, and finding open doors to his many log houses, I had the luxury of walls around me for the night.

**Friday, August 31<sup>st</sup>** — My intention this day was to canoe on down to Price and Jaynes' Hotel,<sup>84</sup> which stands within a mile or so of the river, and there securing some means of lightening the packers, press on to Duncans for the night. Reaching there, I could send off the telegram The Province manager was, I felt sure, anxiously waiting and which would be in time for the next day's issue, and we by Sunday afternoon would follow it up in person. The river, I was told by an Indian, was too low to go down, or this would have expedited matters considerably. But it is safest to travel not to count on too much ahead. At 4 a.m. I was waking the camp, and by 6 a.m. we were all in the canoes. We had to make a slight detour as we had agreed with Charlie to help him find his bunch of keys at a camp he had made two days previously, otherwise he would not have accommodated us at all. Three hours brought us to a pretty bay and to their camp, which those who know Indians know to be of a most primitive character. They commenced at once scratching up the ground, we presumed because they were in the habit of each night caching the keys of their possessions. It fell to the artist to make the discovery and from that moment he was placed alongside myself as a Tyhee.<sup>85</sup> By reason of large timber fires, we had our view of the lake hopelessly spoiled, and it would have been difficult for one who did not know the lake to find his way with promptitude. Paddling steadily, we reached the hotel just at noon, where a disappointment awaited us. There was no horse and trap to be got, neither would there be at the next hotel, a mile further down, for two men had left the lakeside for the purpose of taking the only one there to carry them to Duncans. This meant that we would not reach Duncans by night, carrying packs, for it is a twenty-two mile walk. The river was closed against us, so there was nothing for it but to stop where we were till the morrow, when the stage left for Duncans, which would lighten our loads, and we follow on after. Mr. Jaynes showed us every kindness, permitting us to make camp on his grassy front and accommodating the party with meals that caused the cooks to think that we had been starving for months. The telegram troubling me, Lorient and Cartmel most kindly offered to see it put through by the evening and without thought of themselves, took the road at 3 p.m. to walk the distance in time to catch the issue. Of the party that remained, some rested, others devoured the newspapers; I had plenty of writing to do, the manager in providing for our various necessities being exceedingly thoughtful for both our convenience and comfort.

**Saturday, September 1<sup>st</sup>** — We meant business this day, and certainly by nightfall we had cause for congratulation, for we had walked from the lake to Duncans, from thence down to the bay where we had secured a canoe, and then rowed up against a headwind for about nine miles round into Saanich Arm,<sup>86</sup> just beyond Mauley Point,<sup>87</sup> camping near a small rancherie. The day was just suited to a good walk; the road was grand, the one on which any man could make fast time. After lunch at Duncans we had to tramp on, visiting the rancheries one after the other in search of the needful canoe, for though there were plenty, and many fine ones, some Siwashes were clearly afraid of the gang of men, others wanted to start the following day. I learned from the two men who had so kindly gone

<sup>84</sup> The [Lakeside Hotel](#) was built by Frank Price and Percy Jaynes in 1893; subsequently called the [Cowichan Lake Hotel](#).

forward the previous evening that they, after some fifteen miles' walk, secured a conveyance and made all haste to the town. They found, however, the utmost difficulty in getting their news off — as I afterwards learned, failed to do so — for a youth, evidently filled with his own importance, was the operator and was extremely uncivil and disobliging. We had left Cowichan Lake with regret, but when we were once again in the 'salt chuck' and could see our goal, we could think of nothing else but the morrow, which would bring us to the Queen City of the West.

**Sunday, September 2<sup>nd</sup>** — Up before daylight, we got to work early and pulled steadily to South Saanich rancherie. Here I unloaded the packs, for I could see by the headwind that our large canoe would have great difficulty in getting further up the Saanich Arm. Sending all the men, save Magee, ahead with the stuff to meet me near Victoria later on in the day, and paying off the Cowichan craft, I looked about for a small canoe and its owner to carry us to Goldstream. All save three men were away picking hops, but one of those remaining was willing to go, and we accordingly got into his extremely rickety canoe and dug out against wind and tide and a sea that drenched us through and through. At last we reached the flat land at the head, from whence a trail runs up to the railroad track, then made good time over the four miles that still lay between us and Goldstream House. The rest of the way into Victoria was a pleasure trip, enlivened by meeting friends along the way, and by 7 p.m. we all drew up at our journey's end, soon scattering to our homes.

## THE PROVINCE EXPLORING EXPEDITION OF 1896

---

*The Province, Saturday, August 22, 1896:*

With this issue we commence the interesting report prepared by the Rev. W.W. Bolton of the exploratory expedition in the central portion of the Island, undertaken by Mr. J.W. Laing.<sup>89</sup> By the kindness of the last named gentleman, THE PROVINCE has been granted the right of primary publication of the same, which thus makes complete the useful story which many of our readers will remember appeared during the months of September–December 1894, when an expedition of the northern and southern portions, undertaken by THE PROVINCE under the leadership of Mr. Bolton, had returned from its very arduous task. We feel sure that everyone who has the real interest of the Island at heart will appreciate the summer's work of these two gentlemen, and we take this opportunity of heartily congratulating the Rev. W.W. Bolton on his surmounting of every difficulty and standing today in the honourable and proud position of being the one and only man amongst us who has traversed our Island home from end to end. Mr. Laing's financial backing of the enterprise must needs be additionally appreciated by us all, when it is remembered that he comes as a stranger to our shores, and it is sincerely to be hoped that having taken an admiration of our Island from his friend, he will leave us for his southern home with an added admiration of his own.

THE PROVINCE very naturally feels well satisfied that its aim in 1894 is now a *fait accompli*, that what were theories are now either fully established or explored, that facts hitherto surmised can pass into the region of data, and that a bird's eye view of the Island can now be placed in every man's hands. We have gladly done our share in this work and are more than repaid by the testimony of conscience and our friends, that such knowledge as has been thus gained must sooner or later tend to the real and best development of the Island. Mr. Laing's effort in the same direction, now crowned with success, is every way praiseworthy and it will doubtless be an added satisfaction to him to feel that what his friend of California, the erstwhile rector of Esquimalt, desired to do for the Island that was for a while his home, he has been able to both see and help him fulfill.

---

### VANCOUVER ISLAND BY LAND AND WATER

Two years had nearly passed, but not so the desire on my part to complete an undertaking that alone the matter of time prevented in 1894. How wise the resolution was to omit at that time traversing the middle one hundred miles has been abundantly shown this year, for it has taken six weeks of hard work under the most favourable circumstances of weather and assistance to cover it, which would have thrown the party in '94 into the middle of October before reaching home, when all travelling such as our course demanded would have been sheer madness, amid the great mountain ranges that lie in the central and Alberni portions of the Island.

No local man having taken up the task where left, it was with great pleasure that I found myself able to complete it with the aid of a personal friend and old Oxfordian athlete, Mr. J.W. Laing, who determined to see the matter through, cost what money, energy and personal labour it might.

---

<sup>89</sup> [John William Laing \(1846–1909\)](#)

This time supplies were more under control, for we had learned that no men could carry on their backs enough for more than ten days without wasting time and strength. Relays were therefore ready at Nootka, at Muchalat Arm, at Buttle's and Great Central Lakes, which made the progress of the men actually engaged in working their way across country infinitely easier and swifter. In this, Mr. Laing, at a loss of much that he had wished to see, very materially assisted, thus helping our labours to success, and Mr. Bushby<sup>90</sup> had no small task on his hands in the part he took for the same end.

From Cape Commerell in the extreme north to Victoria in the south, the Island has now been traversed and much made known, whilst many an error has been corrected, but this is not to say that even in such a small area — 14,000 square miles — as the Island covers, all is yet known. There are still many portions awaiting careful travel, but they can be taken one by one and the hardships of our two journeys be largely mitigated and avoided.

What conclusion can alone be come to as to the value of the Island as a whole for man as a dwelling place is not hard to reach. It is the southern portion and around and above Comox, where already the white man has located himself, which holds for him land that, cleared of timber, he can till and live upon. The rest of the Island, with the exception of some portion of the northwesternmost twenty miles or so, the valley of the Tahsis, and scattered acres near the mouths of streams, is not for the farmer. And as to the central portion of the Island, which was the area of our travel this year, it is nothing but a mass of glorious mountains, shining, sparkling glaciers, perpetual snow, torrents, waterfalls, with lakes of every size, some bound the year round in ice. The timber is generally but of second grade and where it is first class, it is impossible to get it to the mill. Mineral-bearing rock is wholly absent. There are no 'Bottoms' to the valleys, where grassland would be found, for they run sheer and steep down to the creek or river's edge. It is a beautiful land, but only available for the artist, the mountaineer and the sportsman. It is theirs in particular and they should be proud of it, and many more of them should see it, but doubtless because of the great difficulties of travel, it will be left to the brute creation which for centuries has roamed unmolested amidst its rocky fastnesses, its deep forests and perpetual snow, and to those wildest of all wild beasts that infest it from the Tahsis to Buttle's Lake, the midget fly and the mosquito.

One the whole I should say that bear is more plentiful than any other animal in the central portion; the deer are very scattered, the long and trying winters dealing hardly with them. Birds, both duck and grouse, are very scarce. Elk are to be found in special localities, particularly about Crown Mountain, but often where one would surely expect to meet with them, no sign or trace of them is to be seen. As to the waters in the centre, the larger lakes have fish in abundance, but the smaller ones have such raging torrents pouring down deep canyons to the sea that it is out of the question to cast a fly with any hope of success.

Years ago, it was a matter of considerable doubt as to whether there were any Wapiti (elk) on the Island. This doubt no longer exists, but where the bands are to be met with is still knowledge much sought after. I do not pretend to have located every band, but I speak that which I do know when I say that they are to be found near Koprino, Koskeemo, Kyoquot, the Tahsis, Crown Mountain, the Nahmint, Comox and the Nitinat. Let others complete the list.

So also with the matter of glaciers. Eyes cannot be deceived when a milk-white stream pours down off the blue ice above. Let him who doubts go and look upon Kowse Glacier or stand upon the summit of the Divide between East<sup>91</sup> and Mosquito Rivers or climb into the hollow of the Central Crag. He

---

<sup>90</sup> [George Gordon Bushby \(1868–1932\)](#)

<sup>91</sup> Burman River

will doubt no more. At the head of Marble River, he will see the largest of all, a great sloping mass that dares one to venture near.

The naturalist and the florist would be sadly disappointed where we spent this summer. Fauna and flora are meagre in the extreme, but ferns and mosses are, as elsewhere, in abundance. Heatherbell is more common than any other flower.

There is one sweet singer in these woods, a common-looking bird indeed, but its beauty is in its throat, whilst the hummingbird flits about you high up in the snow, and the old familiar frog croaks his welcome on every summit.

I think it is a statement hard to dispute that for its size, there is no other portion of the whole Earth where there are more mountain peaks, ridges, rivers, creeks, waterfalls and lakes than on Vancouver Island. We may well boast of our lakes, for in size and beauty they surpass most that other lands of similar proportions hold. There are Sooke, Cowichan and Nitinat in the south; Comox, Sproat's,<sup>92</sup> Great Central, Nahmint and Buttle's in the centre; Nimpkish, Vernon, Muchalat and Woss in the north.

As to the height of its mountains, we must not think that 7000 feet is the supreme notch reached. There are peaks which leave Victoria and Crown Mountain in the shade. In Central Crag we have them touching and surpassing 8000 feet and yet there seemed to me as I stood 7500 feet above the sea that there were still others which surpass them. But amid the highest and in the very centre and heart of the Island now waves the Union Jack, run up there by our hands, a sign set on high of the loyalty of the Isle.

Would it be worth trying to introduce mountain sheep and goats onto the Island? They have never reached here, although they are said to be across the Straits. It would be a glorious sport hunting them amid such fastnesses. The one doubt I have in my mind as to the success of the venture lies in the matter of the food which mountains provide.

We came across ptarmigan and the peculiar track of the wolverine, as if it possessed but three legs. We saw also otter and beaver and marten. Marble we came across in abundance and slate in great blocks, but they would need a fortune to move. We looked for gold, but found none and must leave it for Alberni to give the Isle renown.

One suggestion I would venture to make applicable to pioneers, hunters, settlers and map makers. It seems to me an error to call different portions of the same stream by different names. What are simply forks are given high sounding titles, as if they were entirely separate streams. This misleads a traveller and gives no proper idea of the length of a river. The case is different with the Indians. With them, every mountain, every creek and every band of a river is given a separate name because by such means alone can they give to each other the direction of travel. But with us the compass plays an important part. Because a man is the first to go up some portion or fork of an old stream is not sufficient warrant for him to cover it with his name or any other. I have tried both to avoid and correct this mistake in our goings.

The attempt to traverse the Island from end to end is now a fact accomplished and others may think to follow piecemeal in our steps or branch out on either side, but let me warn them that it is not easy work. There is no 'child's play' about it; it is the most arduous, exhausting and risky labour. It calls for stamina, considerable strength of wind and limb, much endurance and indomitable perseverance.

---

<sup>92</sup> *Sproat Lake*

It is one thing to go for a day's shooting and climbing around Victoria; it is altogether another to face the wilds and untrodden forests, carrying food and clothing on one's back. It has been my part to do the latter from Cape Commerell to Victoria, and my deep admiration of the Island has not been a whit diminished thereby. I still believe that its future is grand, that many a farm will be carved out of its woods, that its true mineral wealth is as yet but touched, that its coal beds are inexhaustible, that its forests hold rich store for the lumberman and trapper, and its waters, with halibut and salmon, cod and herring, can help the old world to live. I would still invite capital to enter here and hardy sons of toil to pitch their tents to try their fortune here, rather than to face the blizzard of the prairie or the scorching heat of the summer lands. But what I have seen I will tell, be it welcome or unwelcome news, and I leave the unembellished account of our final effort to our readers, asking them to look upon it not as the notes of a pleasure trip, but those of honest, arduous labour, and here making public my grateful thanks to both THE PROVINCE and my friend, Mr. J.W. Laing, for having enabled a parson on two summer vacations to lead the way in such pleasant and hitherto unknown paths to what I trust will prove, to some, a profitable end.

---

#### **Distances covered and made.**

Length of the Island: 270 miles. Greatest width: 70 miles.

##### *Expedition of 1894.*

Cape Commerell to Woss Lake, as per map: 70 miles.

Alberni to Victoria, as per map: 100 miles.

Distance actually made by party: 335 miles.

##### *Expedition of 1896.*

Woss Lake to Alberni, as per map: 100 miles.

Distance actually made by party: 315 miles.

Total distance actually made to traverse the Island: 650 miles.

##### *Weather report.*

1894 — 57 days out — wet days: 26.

1896 — 46 days out — wet days: 3.

Lowest temperature at 6 a.m.: 39 degrees.

Highest temperature at noon, in the shade: 90 degrees.

The following notes were made by Mr. Bolton as the party made their way around and through the Island.

**Wednesday, July 1<sup>st</sup>** — Once more, and this time for a finish, we sailed north on the steamer *Danube*, leaving Victoria late in the evening. We numbered this time five: Messrs. J.W. Laing, W.W. Bolton, E. Fleming,<sup>93</sup> C.W. Jones and J. Garver.<sup>94</sup> Our aim, to pass through the central portion of the Island, the agreement covering it much the same as before, save that Mr. Laing was the ‘Angel’, and not the Province company. The supplies were limited in quantity, as we could replenish at Nootka, and had arranged for a second party to enter at Campbell’s River,<sup>95</sup> so as to bring in further stores to the foot of Buttle’s Lake, whilst others would meet us at the head of Great Central Lake. Of the party, we looked to Jones to act as woodsman, Fleming as photographer, Garver to take charge of the cuisine department, Mr. Laing to be the fisherman, and Mr. Bolton was to be in command and chronicler. The make-up of the party was, therefore, wholly new, with the exception of Mr. Bolton, and two of the five had no previous knowledge of the Island, with its bold and rocky ways.

**Thursday, July 2<sup>nd</sup>** — Early morning found us at Vancouver with a while to wait, but this was pleasantly spent in watching a regatta taking place that day. Two men-of-war lay in the harbour and their presence, needless to say, added much to the enjoyment of the people. We were fortunate in seeing Indian canoe races; ten paddlers and a steersman in each boat made an effective sight to us who came from the south, as the five long snake-like canoes shot through the waters at every stroke. We had the misfortune to end one race abruptly, for our relentless captain left the wharf on schedule time and despite our warning whistle, a brave attempt to run us down was made by a four-oared outrigger, which effort was naturally followed by disaster and a cold bath for the scullers. An elderly spinster, who had boarded the steamer surreptitiously for a good view of the races, made her presence likewise felt as soon as the lines were cast off. She must verily possess a sporting soul, for so absorbed was she as we saw her sitting near the stern of the vessel that nothing but the swirling of the screw brought her from her reverie. Then there was a mighty hurry and a scurry, and threats and maledictions, until we put to wharf again and released our prisoner. Then we settled down for a steady run to Union, which we reached in the evening, and as we had lost tide at the Narrows, we rested there till break of day.

**Friday, July 3<sup>rd</sup>** — We were through Discovery Passage by breakfast time and then made our way slowly through the channels to Alert Bay, on Cormorant Island, which was reached by 4 p.m. Onboard we made friends with several who had much interesting and useful data to give us. One white-haired prospector, in particular, who talked about the ’60s as if they were yesterday, told us of a sufficiently unknown experience he had had those many years ago up the Gold River on the West Coast to warrant its repetition here. Several miles from its mouth, above the formidable first canyon, he had come across a rancherie consisting of half a dozen shacks or houses, the owners of which promptly fled into the timber and hills on the approach of his own party. The Coast Indians who were with him did all they could by signs to assure the timid ones of their peaceful intentions, but all was of no avail. What seems probably the explanation is the known fact that a wrecked English captain in the eighteenth century had built, up Nootka Sound, a new vessel for himself and he had Chinese workmen with him. These had intermarried with the fierce Nootkas and the result was much bitter feeling,

---

<sup>93</sup> Edgar Fleming

<sup>94</sup> John Garver

<sup>95</sup> [Campbell River](#), named after Dr Samuel Campbell, the surgeon onboard the HMS *Plumper*, Captain Richards, which was sent by the Royal Canadian Navy to chart the area in the period 1859–1861.

ending in bloodshed. The few mixed bloods had fled back into the hills up Muchalat Arm <sup>96</sup> and there remained almost forgotten. All that is now to be found are the remains of the village.

As we passed along the East Coast, we felt that it was very much wiser to reach our starting point, Woss Lake, by way of the Nimpkish Valley, rather than as we first had suggested, by way of Adams' River. <sup>97</sup> Nothing could well be more forbidding in aspect than the fir-clad coastline passed this day. It is one continuous run of mountains and the country back of it we knew from official reports in our hands to be of a character likely to consume too much of our time in working our way over to the lake. There are passes to be found, where Salmon, Adams' and Beaver Rivers pour down to the sea, but there would still remain a cut across country, which by no means can always be said on the Island to be the shortest way. We noticed that the snow in the central portion still hung very low on the mountains.

Arriving at the cannery, there was a scene of commotion at once, as an effort was already being made onshore to induce a number of Indians to return to Rivers Inlet, where a strike had been going on and the fishermen had left in high dudgeon. Between those interested in the matter who were onboard and those onshore, who looked to the season's pay of the Indians as the means of repayment for goods long supplied, a large number were prevailed upon to ship. Then the fun commenced. Men, women and children laboured like beavers to bring their household effects aboard. Saratogas, portmanteaux in various stages of decay, handbags, bundles of prodigious size, mats, tin pots, dogs and babies, all taken along, the men rushing back and forth to their shacks for still more 'ictas', <sup>98</sup> the women walking as if for a funeral till there was enough freight for a hundred white folk. At last the final whistle blew amid a din of jabbering and excited calls upon the laggards. The very last to come was a serious-miened old woman who, despite the fact that the hawsers were cast off, walked at a snail's pace along the wharf, holding in her hands an iron pot with stew boiling therein. Unceremoniously, she was heaved aboard, kettle and all, and the steamer departed north. Curiosity demanded an explanation of the slowness of gait noticed among the women. We were told that according to the rank, so is the gait. The wife of a chief, whom we saw later on, creates an intense longing to set off firecrackers behind her, or do something equally desperate to increase her pace. She is said to have greatly increased her pace in late years, which makes it hard to imagine what her original gait must have been, the suggestion being freely made amongst us that it came near to a perpetual full stop.

We turned our attention promptly to making arrangements for ascending the Nimpkish and Kla-anch Rivers, and by the kindness of the Spencers, we were introduced to the chief, who, after due consultation with his people, arranged to have a canoe on hand in the morning, and himself and a chief of a neighbouring ranche go along with us. The water he reported as low and that it would be necessary for some of the party to do a good deal of walking to lighten the load. This we were glad enough to agree to, so as to get the men to go at all. We made camp in the cannery and cooked supper on the beach, then went sight-seeing and gathering information. We did the town, carefully avoiding from past experience entering the shacks, but looking into the pretty little church and walking out to the graveyard at one end of the place and the Industrial School <sup>99</sup> at the other.

We paid our respects to the chief as he sat industriously preparing poles for the morrow, and made him a 'potlatch' of a smoking cap. This he promptly donned with evident pride, and we trusted the bribe would work us good. His attire was wondrous, if it lacked any element of being picturesque. A

---

<sup>96</sup> *Muchalat Inlet*

<sup>97</sup> *Adam River*

<sup>98</sup> Chinook jargon for *things*.

<sup>99</sup> [Alert Bay Indian Industrial School](#)

rakish cap, a red blanket, white duck trousers rolled up to the knees, grey stockings and heavy boots. But all the same, he is a chief and is looked upon as the proprietor and king of the Nimpkish River.

In Mr. George Hunt, one of the sons of an old Hudson's Bay factor at Fort Rupert, we found a most interesting person to talk with concerning Indian lore. With infinite patience and diligence, he has been gathering these many years information of every kind from the tribes around for publication through the Smithsonian Institute. He has learned the songs and the dance movements, together with many deep secrets of the Indians, only by identifying himself closely with them, just as his mentor, Professor Franz Boas,<sup>100</sup> did some few years back. In the writings of the latter can be gathered all that is yet known concerning the Indians of the Island and Mainland. To him and his able assistant, Mr. Hunt, great praise and heartiest thanks are due from all lovers of Indian folklore, and there should be far more copies of their labours circulating in Victoria than there appear to be.

We all know of the totem pole, but the key to the understanding thereof is not in everyone's hands. Without pretending to be certain that he is correct in every point, and being open to correction, the writer here ventures to give what conclusions he had come to on the matter after considerable research and enquiry. All visitors to Alert Bay will recall the prominent totem erected there. Let it suffice as an example. Commencing from the bottom, there is a fish, whose lower jaw opens and becomes the door to a shack. Then follow a bear, a man, a crane, a wolf, a whale and an eagle. The totem is the ancestral tree. It is the lineage of the owner. When he goes visiting other tribes, he takes along with him a miniature of his totem and presents it as his passport for recognition and a place among the honoured. According to the Indians, at first there was nothing on the Earth but animals, with fish in the sea. Then a being appeared who turned some of each tribe of animals and fish into men. The owner of this Alert Bay totem therefore claims that his first ancestor came from a fish, and in time, after marrying amongst their own tribe, his descendants intermarried with the eagle tribe. The lowest figure of a totem seems to be the first, then follows the highest, thence one read downward. The fish and the eagle in time branched out and took wives of the whale tribe, and these married into the wolf and so on, till the present owner appeared, whose mother was brought in from the bear tribe. Thus whilst the family tree is given, there does not appear any means of calculating the full generations of the ancestry, but this may yet come to light, the chief difficulty in the way being the evident reluctance of the Indian to give his knowledge to the passing white man.

**Saturday, July 4<sup>th</sup>** — This 'day of days' for those of the party who claim Uncle Sam as their liege lord was ushered in by the unveiling of the Stars and Stripes in our bedless bed-room amid our first camp. Strange to relate, the Indian chiefs were ready to start within half an hour of the specified time, 6 a.m. Clearly our potlatch had done its work, and to make sure of continuance of the favour, we made a similar present to Chief No. 2. This he immediately donned, discarding his ancient and ragged headgear, and forthwith assumed a most dudish appearance. Chief No. 1 dived into one of his numerous travelling boxes and brought forth his own, which not for a day could now be parted with. We paddled across Broughton Strait to the mouth of the Nimpkish and soon felt the rushing of the river, which in four miles falls seventy-five feet from the lake. It was here that Vancouver landed in 1792 after passing through the Narrows. It was then known as Cheslakees and was strongly fortified, some thirty shacks holding the inhabitants. Now it all overgrown with underbrush, but there are still the great beams of the houses standing as silent reminders of past glory. We were not the first band of explorers to enter here with the intention of crossing to the West Coast. Moffat,<sup>101</sup> of Fort Rupert, in 1852 had gone before us, coming out at the Tahsis Canal; Mr. Fry, of the party under the command

<sup>101</sup> Hamilton Moffat

of Mr. Gray,<sup>102</sup> in 1888 had made his way by means of this route, first to the canal and then to Muchalat Lake and Gold River; whilst some of the party of 1894 had brought in supplies and joined the rest as we travelled over the Divide at the head of Woss Lake to Nootka. To the Indians it is a well-known way, and now once again it was to be traversed by white men. We knew what lay ahead of us in the way of rapids. From the mouth of the river to the foot of Woss Lake there are 130 rapids to be tackled, a good training of limbs and muscle for what afterwards remained to be done. The struggle was soon on and foot by foot we conquered. The enjoyment of this beautiful stream was sadly marred, however, by the horrible smell which proceeded from the Indians' camp supplies. Fish, both ancient and modern, were in the boxes, with a decided preference for the ancient. This necessitated a great and general consumption of tobacco, which inveigled at least one of the party into the bad habit all the rest of the trip overland. The river has been too often described to need any special pen sketch here. It abounds in picturesque scenery and long reaches of still waters, especially welcome after the rushing of the stream over the rapids. There was no sitting idle; if not working with the poles, we were ordered out to walk along the thick brush bank or to jump into the river and heave the canoe along by main force of arm. A little past noon we reached the lake and lunched. Then with a stunning breeze and a large sail to catch it, we fairly flew up the lake and arrived at the head where the Kla-anch River flows in, with time to make camp and have supper before dark. Opinions seem to differ as to the length of the sheet of water. We all agreed upon eighteen miles as its length and shall hold to it unless positive measurement is made. At the southwest end, there is the entrance to the series of lakes, the Anutz and the Hoostan, which culminates in the Atluck, whence an easy mountain pass leads one to the West Coast. The writer ought to know, for it was from the West Coast that in 1894 he reached Atluck Lake. Another stream, the Klas-silis, runs into the lake a couple of miles from the head of the west side. On the west side, the mountains are high and snow was on them; on the east side, they are very uneven in altitude. We saw no specially good timber, what there is being but a scrubby fir and hemlock. For game, we came across duck, coon and otter. Our photographer was kept busy and our fisherman made effort to add to the larder, but did not meet with success, although the Indians report excellent fishing earlier in the year.

**Sunday, July 5<sup>th</sup>** — Bright and early we turned into the waters of the Kla-anch River, which enters at the south-east corner of the lake, rising near Victoria Peak close on forty miles away, and for twelve hours fought our way upstream. We found the river low, as the Indians had forewarned us, but still it was as broad a stream as the Cowichan, and from debris lying along the banks gave evidence of rising as much as twenty feet in flood time. Riffles are numerous and necessitated continual pulling and hauling by rope, and at the gorge, Hell's Gate, just below where we made camp in the evening, everything but the canoe itself had to be portaged. At this spot there is a raging, foaming torrent pouring down between high rocks. It made a most picturesque scene as the canoe, tossed hither and thither, with an Indian in the prow and another in the stern, was forced through the narrow passage, we hauling on the rope with might and main. We noticed considerable marble, also red and grey granite. Fir seems the chief timber, but spruce and cedar lie a little back from the water, whilst alder is abundant on its banks. Timber limits exist here, as indeed we found almost up to Woss Lake itself. A good many gravel ridges fallen in with proved good footing for the rope pullers. We saw a few duck and grouse on our way up. The photographer was kept busy and stuck to his work manfully despite stiff climbing and a thorough acquaintance with the water.

**Monday, July 6<sup>th</sup>** — Another day's fighting with the rapids. This was one of our few wet days, but the heavens dealt so gently with us that we scarcely noticed the rain. The Indians had by now taken our measure and made utmost use of us. Chief No. 2 was a tireless worker himself, but the elder one

reserved himself for special occasions. When, however, need arose, one could note at once the hand of a veteran. He evidently knows the river like students their favorite book; it was first this side, then that, and where the waters made various streams it was seldom that he needed to go ahead on foot to prospect. Those of us who could not pole were only allowed onboard when paddles could be used, and the younger chief's expressive "go ahead" when there was need of the rope meant at least volumes of water for the haulers. The Klan-anch has many tributaries, amongst them the Wah-ha and the Koon-Koomasitch below Woss Forks, whilst above there are the English-named ones of the Davie and the Vernon. About noon we came to the Wah-ha, where in 1894 Magee and the writer had come from Cape Commerell via Snowsaddle Mountain and Atluck Lake, and where the canoe of the party who had entered from Alert Bay had picked us up, half famished, and taken us to Woss Lake. So now one of us was on old ground, but time and water had so changed the appearance of things that it was hard to note old spots. New channels were made; high banks had gone; and spurs and gravel beds were wiped out of existence. There is something of a valley hereabouts, but very broken and nowhere looking to be much over a mile in width. Steadily we forged ahead and at eventide we reached the junction of the main stream and the Koon-Koomasitch, which flows in from the north-east, where we were right glad to make camp, despite wet ground and abundance of gnats and mosquitoes. The fisherman tried his luck at the forks, but was rewarded with one rise only. We found an abundance of wild roses in bloom along the banks of the river this day.

**Tuesday, July 7<sup>th</sup>** — A long, broad and low riffle necessitated at the very start our packing supplies and blankets some distance upstream, then in and out of the water all morning. We had not gone more than a mile when we came across an exceedingly heavy log jam. How the stream could have done such work seemed to us a mystery. The axe man had to get to work and cut a way through, no easy task amid cramped surroundings. By noon we reached the Woss Forks, three hundred feet above the sea, and expected that the Indians would enter that stream and land us at the lake itself. But they evidently had had enough and protested that the waters of the side stream would allow them to go no further with so large a canoe. We knew from previous experience that there might be some truth in this, for the run of five miles of the Woss River is exceedingly swift and an almost unbroken riffle all the way. However, we did our best to persuade them, but without avail, so paid them off, lightened the packs of everything that could possibly be spared, leaving by misadventure some supplies we could ill afford to lose, had lunch and were off to the lake by land. There is no very high land hereabouts, but the undergrowth is heavy and where one escapes the brush, there are swamps and beaver meadows to wade through. Not having our packing timbers in good shape, there was plenty of tumbling about and, of course, slow progress, and just before dark, finding we could not make the lake itself, we camped in a rough and most undesirable spot and made the best of the night we could. A fine deer hove in sight whist on the march, very red and with good antlers, but he was gone in a twinkling. About here was an abundance of signs of both bear and deer. Whether the Indians were justified or not in breaking their contract, it meant an annoying delay to us, for a raft would have to be made to take us up to the head of the lake, and the wind then might be against us for days, which would still further delay us. We had cached a canoe at the head of the lake on our previous trip, but we were at the wrong end for it to be of use to us, even had it not been found and carried off.

**Wednesday, July 8<sup>th</sup>** — The enemies of the night drove us from camp just as quickly as we could get our things together and a short half mile of burnt timber land, which those who know what such means will feel for us forcing our way through, brought us to the foot of Woss Lake, a beautiful sheet of water hemmed in on both sides by mountains, with a precipitous shoreline, especially of the west side. It lies almost due north and south, with a hook-shaped bay at its head, and is about ten miles long. Like all lakes on the Island, it is very uneven in width, jutting spurs of hills running far out and almost meeting in places. After prospecting for good timber, we settled down for camp and went to work raft building. Our shipyard was not the tidiest, being the receptacle of many old bones of trees, but Jones soon collected logs enough and by evening we were nearly ready to start. The 'Davy Jones'

consisted of four main logs, with a flyer at one side. These were held together by two crosspieces dove-tailed in. The rowlocks were similarly fixed. The only implements used in the building were two axes. Poles were made out of cedar, and a platform for the packs was constructed out of driftwood. Oars were left till the morning.

**Thursday, July 9<sup>th</sup>** — The day opened clear and calm, but before breakfast was done and the packs ready, the wind sprung up and blew with exasperating force all day. We made two attempts to go ahead after finishing the oars, but made so little progress against a headwind and at such a risk to our packs that we had to put ashore and wait for calmer times. One of the party took a couple of cartridges and went forth seeking fresh meat. A fleeing buck took his missiles and, of course, on his way back he almost ran over two others, besides a bear. The wind dying down a little, as soon as we had supper, we went aboard determined to reach the goal. Our only chance seemed to be to row during the night, and this we set to work to do. For the first two hours the waves washed our decks in a most unpleasant manner, but in time the swell died down and on we kept till 2:30 a.m., when in inky darkness we reached port. It was strange work feeling our way on the darkness. We poled as much as the coast would allow, and this made the course much longer. The navigating lieutenant with his pole stood to his post throughout the seven hours' work and steered us past many a snag and danger. As we rowed along through the winding path of the lake, there was an utter silence, save for an occasional waterfall or stream rushing down. Nature was asleep and before we were through, we felt very much inclined to follow in its wake. Arriving at the head, we lit a large fire on the shingly beach, hard by the milk white stream of the glacier above us, and laid down in our clothes around it to sleep out the few hours till daylight.

**Friday, July 10<sup>th</sup>** — A more glorious sight than that which welcomed our awakening cannot well be imagined. The sun was shining; the sky was cloudless and blue, Rugged Mountain looking down upon us with its glacier shimmering in the light, its waters leaping down by half a dozen streams to gather together at the base for a united rush to the lake. The photographer also was in his element. He also took the fisherman by surprise, who, asleep on the beach, tired by the exertion of the night, was awakened by the cry of "fish for breakfast." Sure enough, the early riser had landed six handsome trout, running up to a pound in two cases. After breakfast we went in search of our cached canoe, but the Indians had been before us and we found only the boards and branches we had so carefully covered it with. So we fell back for the day on our 'Davy Jones'. The old camping place was almost obliterated. The two streams pouring in had made new channels and all we found of the past were the tent sides of those of us who had camped in the brush. We now canvassed carefully the situation. Here was our starting point, and Alberni was the aim. We had to explore the unknown regions in between. The Government survey party of 1888 had followed up the Klahan to Vernon Lake and thence explored the region northeast of Woss Lake to Muchalat Lake and Gold River to within twelve miles of the west coast, whilst the country lying between the Tahsis Valley and Head Bay up the west side of Tlupana Arm had also been entered by white men.

This left us with the necessity of reaching as rapidly as we could the latter arm and there taking up the work from the arm's southeast side, making our way through the Conuma Peak district as far as the valley of Gold River, then crossing from the head of Muchalat Arm to Crown Mountain district, in which Buttle's Lake lies, and from there working across the country to Great Central Lake, whence roads would lead us to Alberni. All this we eventually did, and how we managed here follows. But first there came up the question of supplies. Food is a matter of paramount importance in the woods. We looked over the stores and found at once that we should have to replenish our supplies certainly once, if not twice, before meeting our supplies, which were to be at Buttle's Lake. The nearest place was Friendly Cove, thirty miles distant, from the head of the Tahsis Canal, which was our first objective point, twelve miles from where we were at present. Another store was at the new cannery near the head of Muchalat Arm. We decided to go down to Nootka (Friendly Cove), thus completing

a trip across the Island and securing a series of photographs, unique and touching all phases of the Island, and thence go by canoe up Tlupana Arm, where three of our party should enter that country, the other two meeting us with fresh stores up Muchalat Arm, and then leaving us again, make their way by water directly to Alberni, where after looking into the mining possibilities of the place, they should take in yet other supplies to the head of Great Central Lake in case what we left Buttle's Lake with were insufficient to carry the three to their journey's end. The possibility of any one 'cutting across country' in a straight line from Woss Lake to Tlupana Arm, there to begin the duty of exploring was as likely to us as we looked at the mountains of bare precipitous rock that close in the lake and run all down the Tahsis Valley to the river's mouth, as two years before we had looked to be going straight from Snowsaddle Mountain to the Atluck Lake. We then had to make immense detour, swerving to the south till we touched the sea, then working back, and after trebling the distance, reach the lake. Thus a straight line of seventy miles came to be in reality a travel of 215 miles from Cape Commerell to Woss' waters. But how to get down to Friendly Cove was the next question. We knew there to be a rancherie at the head of the Tahsis Canal and trusted that we might find, as we had once before, a canoe, a canoe that would be hireable or saleable. If not, we would have to face the building and slow progress of a raft. So minded, we moved camp in the afternoon from the spit we were on to where a start would be made in the morning over the divide of 1000 feet, which lay between us and the Tahsis River, and then went fishing, meeting with excellent success once more.

**Saturday, July 11<sup>th</sup>** — A stiff two miles' climb brought us to the summit of the divide. It was decidedly hard going. The undergrowth was especially thick, and a good deal of clambering hand over hand was required. This with two hands free is comparatively easy, but when one has a good pack on the back and a rifle or an axe, a fishing rod or a camera in the hand, it is a very difficult task. But all the same, we got there at last. The divide is a narrow gorge with towering mountains surely 5000 feet high on either side. We reached the snow lane, but above us there were more mighty banks of it. After lunch we began the descent and camped about as low in the Tahsis Valley as Woss lake is on the other side of the divide. We kept on the west side as much as possible and were rewarded for a somewhat extra climb than might have been taken by a bear hunt. Coming out of the timbers into an area of several acres of shrub running up into snow, such as elk love, we were on the lookout for such game — trails made by them being very plain — when the commander espied at some distance a very large black bear making hasty tracks ahead. Bruin was making for a shelving ledge of rock, and the commander, pack on back, fired, hitting him hard but not quite enough forward. A second shot fell short and by this time the Bruin had crawled into heavy brush. The sportsman, throwing of his load, ascended up a snow slide and sought to bring the beast face to face with diligence, but those below saw him cross just above a waterfall and enter shrub, which hopelessly hid him. As we descended into the valley by way first of an elk trail, and then of an Indian, and later on down streams and rock slides, we had a grand view of the Tahsis River, one of the west side, the other on the east side of the divide. Fine and picturesque waterfalls are plentiful here, and again the photographer was in his element. A white flower in shape like a star, about an inch in diameter and lying very close to its four leaves, was met with near the snow in great abundance — the clintonia.

**Sunday, July 12<sup>th</sup>** — The day opened with light rain, but soon ceased, and travelling was good through the fine valley, despite its being cut up by many streams and a good deal of salmon-berry and other bush. We noted large cedar and spruce, but very little fir. We made to nearly the head of the canal by evening, when we camped in a most lovely glade, one out of the very many, rich in ferns, the river flowing close by and the great cone of rock, Tahsis Mountain, towering behind us. The prison walls that hem the valley on either side run up to heights that, however much we might have wished to enter the land immediately beyond, gave us no chance. Down the canal we had to go. The temporary loss of the fishing rod in its tin case caused much concern for a time, but by dint of a long pole and perseverance it was eventually hooked and landed.

**Monday, July 13<sup>th</sup>** — We made our way down and alongside the river until we could get no further with packs. The mountain now came down to the water's edge, and the valley was well nigh ended. The commander and Jones went ahead, hoping to get a canoe, and after skirting the rocky banks and breaking a trail through the brush, came out at the river's mouth, driving a couple of deer ahead of them across the water. The rifle had been left behind. The rancherie stands on the northeast side of the canal, and to our regret we saw no signs of life thereabout. Wading nearly to our waists, first across the river and then through the long grass flat of the head, we reached the side on which the houses stood and climbed round and down to the place. All the shacks were deserted and there was but one tiny duck boat in sight, and that was worn and badly cracked. Necessity knows no law, so we found our way, by gentle pressure, into the building and discovered a fragile river canoe and a couple of much used paddles. Down to the water we bore our prize, and at first it was touch and go whether we would not both fall out. We had seen a frame building on the opposite side of the canal, evidently new and put up by white hands. By dint of great care the house was reached, but it was untenanted. Later on we found that it was a fishing house placed there by a new enterprise, the West Coast Packing Company, and removable at pleasure to where the salmon are expected to run. There being no other vessel in sight, we essayed the task of poling upstream for the packs. The writer preferred, after a very short experience, to pole himself alone on his underpins up the river, but between us we got to where the rest of the party were, had lunch, and then Jones went downstream alone loaded to the gunwale. He arrived safely at his destination and we followed along our morning's trail, making camp immediately behind the company's shack, the other side of the canal from the rancherie, dreaded by us as the likely stronghold of many small but powerful enemies. Out again, we two started looking along the shore in likely places for hidden canoes, but never a one was there. However, we came across a buried Indian woman, not hard as a sepulchre to be seen by the passer-by, for the body lies in a river canoe, the whole wrapped in a sheet, tied up in a slanting direction in a tree with all the party's wardrobe hung on separate branches. Her garments were never numerous, but such as they were they followed her to her place of rest. Above all these, and in another tree close by, was a box suspended, somewhat hidden by what might be taken for a drum. A feeling of reverence forbade us prying for more details. There was nothing for it but to make the journey to Nootka in the canoe at hand, and there secure one large enough to bring the party down. We decided, therefore, that with the break of day, the commander and Jones should attempt the long journey to Friendly Cove, a distance of thirty miles, in the slender craft, and that the others should commence on a raft to follow us slowly down, should we find difficulty in finding what we went in search of and be longer in returning than we anticipated.

**Tuesday, July 14<sup>th</sup>** — By 5 a.m. we two had cooked our breakfast and with the tide in our favour, both essayed and practically accomplished our task of reaching Nootka. The dangers we ran and the escapes we had during the run of seventeen hours are too numerous to detail, but are ever likely to be remembered by both of us. Our craft was a mere cockleshell, and to put our arms on the sides meant overturning it. But determination makes light of difficulties and passes over risks with a laugh. Lying down in the bottom of the canoe, we sped along with the paddles till we covered the first ten miles, then growing bold, we gladly welcomed a slight breeze in our favour and determined to chance a sail. As we had to leave both the axes in the camp for the raft builders, we had to get a mast and spit as best we could with the help of our jackknives. During this rest and whilst on a short spit, we came upon three deer (yearlings). They had no fear of us, but gamboled and played about us within a dozen yards. We had not dared to carry rifles, so we looked on at their enjoyment and sighed. Our supply was limited to cocoa, bread and beans, for at headquarters we had left a most impoverished larder. Our blankets we had wrapped in a rubber sheet and this we improvised as a sail, and a capital one it proved to be, carrying us for just another ten miles, when the wind turned against us.

We made the twenty miles by noon and thought we could get to the cove easily during the afternoon, but we counted without our host. It took us until 10 p.m. to make the last ten miles. The swell of the

ever-restless Sound was now rolling in and the wind soon stirred up things till the prospect looked very ugly. But get there we would. Point after point we rounded at the imminent risk of collapse. The little ship rode the waves bravely, but many times we had to run for safety. From a rock eminence that we climbed during one of our waits for the wind and the waves to still, we had a magnificent view of the district from the Tahsis Valley to Tlupana Arm, opposite to which we stood. It is simply ridge on ridge of mountains, largely rock, with heavy snow up to certain line, with here and there a specially fine mass of rock running up alone and sheer into the sky. Conuma Peak cannot be mistaken. It was nearly fifty miles from us, but it stood out alone, like a sugar cone pointed to a degree. Two canoes of large size passed one of our prison posts, but the Indians did not come to our relief, although they were within easy speaking distance and we pointed to our tiny ship and the big sea. But really they seemed to have enough to do themselves to get along and round the points of land. So little by little we crept along, rounding each curve at a rush, shipping seas till we were fairly drenched and working like beavers at the paddles. Jones was the navigator and kept splendid control of the craft. By 9 p.m. we were drawing near the cove and running among some small islands, lost the larger waves, but we had to come out from these friendly shelters and make one last dash. It was almost quite dark now; we could just make out where lay our goal. Close by the shore we crept along, just keeping out of the touch of the rocks, heading up to the waves, ploughing through where we could not get clean over. The last long beach of rocks was gained and passed, but there was still the inner cover to reach. We left that for the daylight. We ran up on a little beach, more rocks than shingle, hauled our canoe out of danger's way and crept up among the rocks and chaparral overlooking the Indian village. All was still there, for it was 10 p.m., so feeling unequal for more we lay down as and where we were to rest. It was no easy matter finding six feet of room for each man on the level. By 3 a.m. we were up and saw many canoes and the rancherie quite plainly. It did not take us long to be in our canoe once more, and despite a sweeping, swirling tide, force our way into where perfect shelter and an ideal cove held promise of rest and the crowning of our labour.

**Wednesday, July 15<sup>th</sup>** — The usual quoterie of dogs and crows saluted us as we stepped ashore, but otherwise the place was fast asleep. We whiled away the time as best we could till Goss, the general storeman of the place, arose, who promptly gave us the heartiest welcome. He had taken unto himself a wife since we last had met, and now a little child makes the home complete. Breakfast over, we were taken amongst the Indians and with a great deal of palaver an agreement was come to for two Indians to return with us in a commodious canoe. Whilst waiting their pleasure we were obliged to note that the cove is not a place where delicacy exists. The clothing department is decidedly scanty, and every man takes his morning bath in public. Towels are unknown, and the sun takes their place. It was a curious scene, with the little dark-skinned figures sitting along the pebbly shore drying off. They do not seem a healthy lot at the cove, especially the children. There is still the Indian doctor working his deadly work amongst them. Surely what is needed is to remove the sick wholly out of the power and reach of these quacks and to give them solid and wholesome food rather than the fish oil, which, when sick, they turn from to slowly starve. A hospital under proper charge, built in some central locality, would meet a great and crying need; that is, if it is the wish of those in authority to see the Indian race amongst them continue. After many delays and an endless amount of jabbering, we got away and with a large sail and a fine breeze, skimmed along for twenty miles. Then the wind went against us and we had a long and hard pull and paddle against both wind and tide. Such narrow places as these canals on the West Coast turn the wind every way. By supper time we had rejoined the rest of the party, who had by no means been idle but had nearly completed a raft, though very glad not to have to use it. As we rested that evening, the tug 'Alert', in the service of the West Coast Cannery, came up the canal to leave men to remove the house to a better spot, the cannery itself, where it was to be turned into use for the Indians. It was strange to hear a whistle in those waters, where all had been so silent and lonely, and to see the white man's vessel where for centuries only the paddle and the sail had been in use.

**Thursday, July 16<sup>th</sup>** — Before day had fairly broken, the house was being taken to pieces and loaded on a lighter ready for transport. By 8 a.m. we were off, and after taking our photographer to special locations for views, we came straight down the cove before a stunning breeze, making the entire distance before noon. From Goss we learned that 'Muchalat' is no longer at the mouth of Gold River, but though there is still a large rancherie there, the real settlement known by that name is near the entrance to the Arm of the north side. There is neither store nor mission at either place, although such were noted on our map.

**Friday, July 17<sup>th</sup>** — We sailed across the Tlupana Arm, winding in and out among various islands that are so plentiful in this sound. Again the breeze was with us, but not until the old Indian had worked his witchcraft, singing and whistling for it in a most peculiar and uncanny way. His face beamed when he saw it coming and when the two sails were full and we were flying along, he fell to singing, which seemed to be his normal condition. As one enters the Arm there is a marked change in the mountains; they lose their fir and show a great deal of bare rock, but this does not continue for more than a few miles. It is near here where Deserted Creek runs in and where marble quarries, once worked, now for a while lie untouched. We left Head Bay soon after and bearing to the east, entered by a sharp turn into the bay which forms the head. Here to our joy we saw a river of fair size pouring out and a valley leading into the Conuma Peak district, the new and unexplored country we had to traverse. This was our way, evidently, as towering mountains rose up on both sides to heights which men with packs have no desire, unless compelled, to climb. Here we made camp, finding the usual grass flat at its head, and prospected a little way upstream to find out what lay ahead of us on the morrow.

**Saturday, July 18<sup>th</sup>** — After seeing the two set off in the canoe to the cannery up Muchalat Arm, where we were all to meet in four days' time, we three shouldered our packs and started up the Laing River.<sup>103</sup> It is a most picturesque stream in its windings, and when the water runs high must be both broad and deep. It is not navigable by canoes, but stakes for salmon nets placed some distance up tell of the usage the Indians make of its waters. Its course is through a narrow valley without noticeable timber, what there is being spruce and hemlock. It is not specially hard to follow up its banks, although many crossings had to be made during our tramp of six miles. The last half mile was through a canyon which we could not escape, and had no small difficulty to make our way through. The sides run up sheer a thousand feet, whilst the banks are nothing but masses of boulders. These we crept amongst and crawled over, in one place having to take our packs off and hand them from one to the other, as neither stride nor leap would avail. We were hemmed in all day, and saw neither arable land, bird nor beast.

**Sunday, July 19<sup>th</sup>** — We followed the river all day as far as it would allow us. A mile above camp we noted an extensive valley opening towards the north, swamp land without any formal stream. Then we were forced to take to the hills. We entered almost immediately a second canyon, so kept up as high as we could on its sides, clinging to anything that would give us support. The undergrowth on the side of the mountain we were on was specially dense and troublesome, but there was still worse ahead, when after an almost perpendicular climb — forced to it by the course and sudden fall of the stream — we came to the lower source of the river's volume and rapidity, a small lake — Frisco Lake — half a mile long by a quarter broad, 2000 feet above sea level and evidently of considerable depth. We had to fight our way to its head, where, after our tramp of four miles, we were very glad to rest for the day. There is a good deal of Alaska cedar about this spot. Bear signs were abundant and we saw near camp in the evening one of the largest does, with two fawns, that any of the party had ever looked upon.

---

<sup>103</sup> Nesook River

**Monday, July 20<sup>th</sup>** — Taking up the course of the largest of the streams that pour into the lake, we began at once to climb and after crawling hand over hand about 1500 feet, necessitating many a rest and much mopping of brows, we came to another lake — Cala Lake — slightly smaller than the one below. This lies within 500 feet of the top of the divide we were making for. On the way from the one lake to the other we came upon a large acreage of ideal grazing land for deer, consisting of patches of moss and grass, untimbered, and cut up with endless pools of still water. Sign was everywhere, but no head showed itself. From the appearance of the valley it runs southwest towards Muchalat Arm. Here also we noticed much heather, white as well as blue, and what would be very hard to discriminate from a violet. Cala Lake has rocky shores, so we had little trouble in reaching its head. Then at once we were in snow, and the trees became dwarfed and bent. Five hundred feet more, with a scramble and a haul, and we had reached the level ground of the summit, where we made our tea for lunch with Boulder Creek water. Standing between the ranges which shut us in, and looking back, we could note the arm we had left and the mountains that run all the way into the Tahsis Valley, whilst looking ahead across the valley we could easily discern the Gold River's course beyond. Not content, we left our packs and climbed yet higher on the mountain to the west. Then we had a superb view. The day was bright and clear of all mist, so that every peak showed up. And peaks and snow were everywhere. Such fantastic shapes, some sharp, some clear cut, others broad and many pointed. Ranges running every way, none of any length. They seem as if thrown promiscuously about; they cross and turn again; a valley running north is suddenly broken off short by another running west. Over where Buttle's Lake lay we saw those great central masses of rock, then looking towards Bear River<sup>104</sup> there appeared some with immense banks of snow, whilst what may very well be Crown Mountain stood up amongst its fellows. Conuma Peak was unfortunately hidden from us by another mass of rock. Altogether the sight was well worth climbing twice 4000 feet to see, and we were very loath to leave it. It is always well to see that which lies ahead and we took the points in carefully for future guiding posts, then turned our attention to getting down the many feet we had climbed up. About a quarter of a mile down, we came upon an immense rock slide that proved a bonanza. It ran from the summit down our divide, clear to the creek, a distance of two miles, and we clung to it desperately. We were three hours getting down, and thought ourselves specially fortunate in not striking a single long, straight drop *en route*. When at last we reached the creek, we found it a mass of rocks of every size, with a goodly stream working its way to the Arm. Looking back and up we realized what a fearful avalanche of granite rock it must have been as it broke away from above, leaving a great chasm and crashing down the water course to the valley. Some of the granite was beautifully marked and variegated. We had dropped 3000 feet and were four miles from the Arm. It was too late to push on, so we carved out a camp amid huckleberries and surrounded ourselves with smudges to keep off the enemy.

**Tuesday, July 21<sup>st</sup>** — Seeing no need for crossing the creek and climbing the one thickly wooded range that lay between us and the much exploited Gold River, we determined to follow the creek down and join the rest of the party, who were to be on the lookout for us on this day, the fourth from Tlupana Arm and the limit of our supplies. The nearer we got to the mouth, the denser the sal-lal became. Driven out into the water, we found it ever and anon tearing down a defile between mountains, which forced us up into the hills again. We crossed and re-crossed the stream; we followed deer trails and bear trails; we crept down waterfalls until by 2 p.m. we came into burnt timber, which soon brought us to the Arm. The creek carries its boulders to the very end. Here are the remains of some large Indian dwellings, but whereabouts the cannery and our men were, we could not tell nor see, for a forest fire completely enveloped the landscape. We fired a signal as arranged, but no response came. We waited hour after hour, thinking it possible the others might coast along the shore and drop upon us, but our only visitors were a seal and a whale. We could not, even had we wished

---

<sup>104</sup> Bedwell River

to, make our way along the shore, for the rocky sides left no room for man. But after a while, out of the stillness we began to hear the sound of logging and then even the strokes of axes. These were in reality two miles away, across the Arm where the cannery stands. We waited until 6 p.m., when the sounds ceased and we surmised that the workers would be at supper, then we fired twice in rapid succession, and quickly there came not only the echo but an answer. We knew that all was right and that our men would soon be over and take us from what was anything but a desirable place of rest, stones, nettles and poor wood. Fleming shortly came out of the gloom and smoke in one of the cannery's boats, and it did not take long for us to be in the midst of a hive of workers. The manager, Mr. Hooper, showed us every kindness and attention. What with over twenty white men, forty Chinese and a bevy of Indians, men and women, the cannery looked very much alive. It is very pleasantly situated and the buildings are thoroughly up to date, complete in every particular. It was a treat to sit on a chair again, and when we climbed into our bunks in the main sleeping room, capable of holding twenty white men, we soon found sound repose.

**Wednesday, July 22<sup>nd</sup>** — We rested till after the noon hour, mapping out our next course to Buttle's Lake from the head of Muchalat Arm, calculating on nine days at the furthest and putting up supplies for that time. We could see nothing of the Arm itself, for the smoke hung thick and low. We could see, however, a fair sized island lying between the cannery and the mouth of Gold River. We went through the timber to where the Indian camp was and saw the commodious log house built for them and the man busy at re-erecting our Tahsis house. Then hiring an Indian and his canoe, and taking the photographer along in the hope of the smoke lifting and of his being able to secure certain views, we set out to the head of the Arm to where we were told a goodly-sized river ran in, coming down a long valley which headed the way we would go to Buttle's Lake. Eight miles of steady paddling brought us to the mouth of East River, <sup>105</sup> here as broad as the Nimpkish. There are a few Indians' shacks at the head, but we passed by them and went some distance upstream until poles were necessary, when we stopped and made camp, sending our native to his own to meet us in the morning and pull the packs up as far as the canoe would go. The sides of the Arm are very steep and almost wholly rock. The smoke prevented us seeing anything of the country beyond.

**Thursday, July 23<sup>rd</sup>** — Leaving Fleming to be picked up when the Indians returned, we set out on our way across unknown country to Buttle's Lake, where the party from Campbell's River mouth were to meet us. Near the mouth there is something of a flat, but it soon narrows and promises little as an arable piece of land. Devil's club thrives here in wonderful abundance, some of the leaves standing fifteen feet straight up from the ground. What we should have done with packs on our backs we had a taste of during the afternoon, when four hours took us but two miles upstream. The Indian and his co-workers poled up the various rapids, finding none specially difficult until they had gone some four miles, when a stiff rapid forbade further progress, the Indian protesting that he would get into trouble there on his return, being by himself. He had been a great help to us, but here we had to part with him. After lunch we tackled thick brush till camp time, bringing us at last near a deserted Indian shack, which had not been used seemly for many a year. The smoke had somewhat cleared so that we were able to see that precipitous mountains bound the river on both sides and snow-capped peaks looked down on us. The river is broad for its first six miles and has a gentle fall up to where the Indian left us. We saw a flock of ducks with their broods, and some deer were out on the beaches of stones, which are frequent up this stream. From the game traps we came across, there must be an abundance of bear about; some of the traps were very carefully made and built into regular drives, compelling the beasts as they came along the trail to enter the snare. Our native informed us that over the mountains to the south, in Bear Valley, there were elk and beaver in abundance.

---

<sup>105</sup> Burman River

**Friday, July 24<sup>th</sup>** — We had made camp close to the first forks of the river, and the first thing to be done was to fell two trees to act as a bridge to carry us over the south fork to the main body of the stream, which still came from the east. This difficulty overcome, we found travelling good. The river canyons at the forks, and it continued in one unbroken gorge for four miles, which was the distance of our travel for the day. The sky was clearing of smoke, but the sun's rays had little chance of penetrating into the chasm or the heavily timbered valley we sometimes had to take to. Hemlock is plentiful here, with an occasional fir and cedar thrown in. The scarcity of bird life was most marked, and the monotony of silence was only broken by the sound of ever-rushing waters. Canoes can get no further upstream than the forks we crossed this day, and from there all sign of man ever having passed this way disappeared.

**Saturday, July 25<sup>th</sup>** — A day's hard going, and only a little over three miles covered at the end. It was steady climbing from the moment of hitching on the packs. About ten miles from its mouth, the river forks again, coming from the east and the southeast. The former is again the main stream, and this we followed, happily finding a fallen tree by which to cross the stream that here runs in. We were still in a very narrow valley, but there was nothing to be gained by leaving it. One specially difficult canyon took us a long time to get through. At times it seemed as if we could not possibly go ahead, but Jones' experienced eyes found ways of escape, even to creeping on hands and knees between rocks, and after finding a crossing over a stream, reaching somewhat easier country. It is a decidedly trying experience, after climbing up some hundreds of feet to turn a corner and find sheer, straight-up rocks ahead, forcing one down, only to have to clamber back to the same grade sooner or later. All sign of deer and bear were gone; they seemed to have settled it amongst them that such country was absolutely uninhabitable. We again reached the line of Alaska cedar, and nearing the summit by camp time, found all trees looking stunted and tempest tossed. About twelve miles from the mouth of the river there is a specially fine fall of water dropping down some 400 feet. We were now up over 3000 feet, yet the mountains on either side seemed far away above us.

**Sunday, July 26<sup>th</sup>** — A day of sight-seeing for the climbers. It was uphill all the time, but we were well rewarded. Taking up the same course, we travelled close on a mile and then came to a small lake — Iron Lake — about three-quarters of a mile long by a quarter broad. To get down to it was no slight task, for we were keeping high ground wherever we had a chance. Creeping along the southerly side we saw our river coming in, now from the north. It was the only way to go, for there were no passes to right or left. This little crater of water lies a little over 4000 feet above sea level. Passing on, we took lunch in a most inviting spot, mossy, open and warm, although the snow was close to us. Another 1000 feet up through slight and easily mastered bush, and not over half a mile, we came to a second lake — Otter Lake — considerably larger than the lower one. This has a natural dam of solid rock, the water leaping sheer over it, and when the volume behind is increased by the spring meltings, must make a very picturesque scene. Standing now on the dry portion of the broad dam and looking back whence we came, we could see peaks without number, and snow on nearly all of them; looking ahead we saw another bench, and then a mighty mountain with two towers, one at either side with a great level space between.<sup>106</sup> We judged the towers to be 8000 feet high. Still no chance for going east was offered us, so we had to keep straight on and tackle the bench ahead. We could note at the head of the lake, where two streams poured in, one from the west, the other from the north. But reach the latter we could not, nor, had we done so, would it have availed us aught, since it is but the outpourings of a waterfall far surpassing anything the writer had so far seen on the Island. This we found out when we stood 1000 feet higher than the lake itself and peered down the chasm from the jumping off place of the water. Clinging to rocks and roots and brush, using the snow beds wherever we could reach them, skirting forbidding juts and straining every muscle, we reached the top of the bench to find

---

<sup>106</sup> The [Golden Hinde](#) and the [Behinde](#)

ourselves in a wonderful amphitheatre of granite rock, the shelving sides carrying great acres of snow and in the bottom, a sheet of water, solidly frozen for some inches, but pouring itself out towards the waterfall. Here was the supreme source of our river. We looked like mere specks as we stood in the great circle. We made camp, for we were thoroughly tired out. The river, which we had now traced from its mouth, we judged to be rather over twenty miles in its tortuous run. From start to finish it is very picturesque and we could not but regret that we did not have our photographer with us. Directly across from the lake ran a low range covered here and there with patches of snow; to the left were seven rugged and towering peaks, sentinels to the ocean shore; to the right there were three more keeping watch over Gold River and vieing with Conuma Peak and Tahsis Mountain for height and comeliness. We made three and a half miles this day, and after three days' climbing thought we were now fairly entitled to a little downhill grade.

**Monday, July 27<sup>th</sup>** — It had been a chilly night, for the wind blew cold through our snowy arena, and after 3 a.m. we slept but little. By 5 am. we had a rousing fire and sat around it mending garments, which had suffered badly the past few days. After breakfast we crossed the amphitheatre and climbed the opposite ridge, some 500 feet, to look upon a most wonderful landscape. At the base of the great mountain, with its two towers, and in the valley that divided us from it, lay a lake — Balloon Lake<sup>107</sup> — not less than a mile in width, with ice lying in patches over its surface. Everywhere was snow. The view gave one an idea of a winter's morn, with the sun shining brightly in the clearest and bluest of skies. To our right lay another crater of water — Ice Lake<sup>108</sup> — this of solid ice, and these two lakes are the headwaters of a river — Mosquito River<sup>109</sup> — that bore down in front of us, going north, with a perceptible turning off about ten miles down towards the northeast, where the foot of Buttle's Lake would lie. We had hoped to have a glimpse of Crown Mountain from our airy perch, but another high range shut the further district wholly out. We would have essayed climbing the twin peaks, only the deep ravine between us would have taken up too much time and our supplies required us to hasten on. Our course was straight ahead down the valley, keeping as high on the east side as we could. Away to the south we could readily discern the source and the valley of Bear River, and somewhat to the east of south we noted peaks which we were sure overlooked the head of the lake we were now making for and would show us a pass to Great Central Lake. But this way we could go up, as supplies were to be at the foot of the first lake. So down the snow we went. By dint of great care we dropped 1100 feet and reached where the waters of the two lakes meet. Here lies a pretty sheet of water — Clear Lake — which has the peculiarity of having no outlet. Down half a mile below the lake, we found the water oozing out in a score of places, soaking its way underground from above. Strenuous exertion on our part failed to prevent us going low down in the valley, for we could not possibly work our way along the rock mountain side. Each side presented numerous waterfalls rushing down from the snow-clad tops and gulches, while snow slides had cleared away hundreds of acres of timber, leaving alder bush to take its place. This seemed a likely place for elk, but we saw no sign, only those of bear, in plenty, and deer. Along the stream we found considerable marble. A few birds were seen as we passed down on the snow, very small and of a brilliant golden plumage. Our old enemy, the mosquito, greeted us on the summit and increased in numerical force and tenacity of purpose the lower we descended, until the fight became fast and furious. We camped after a four-mile tramp, three miles north and one mile east, finding a level spot close to the river. We had to cross the stream innumerable times, as the brush positively forbade progress in many places. From a map of Buttle's Lake in our possession, we saw a stream noted as coming in about three miles from the foot. This was the one we conjectured we were now on and it proved to be just what we thought.

---

<sup>107</sup> [Burman Lake](#)

<sup>108</sup> [Schjelderup Lake](#)

<sup>109</sup> [Wolf River](#)

**Tuesday, July 28<sup>th</sup>** — Ahead of us down the valley where a mountain, heavily timbered, swerves the river to the northeast, a deep gorge to the west showed where another stream joins forces and nearly doubles the volume of the river. We plodded on, hour by hour, taking short rests and long hauls, ascending and descending, and often in the water as the easiest path of all. Twice the axe men felled trees by which to reach better paths and each time the work was neatly and aptly done. When we arrived at the head, we made our sixth and final mile by ascending, that we might get out of the timber and see what lay round the bend of our valley. We were rewarded, although we were not high enough to see the lake itself. The river headed the right way and a large valley betokened where the big sheet of water was. And what told us that we could not be very far off was smoke coming towards us. We had arranged with those who were coming in with supplies via Campbell River to light a fire, but now feared that it had got beyond their control and might shut out all view from us on the morrow. At present we were well above the smoke and it outlined clearly the route to reach our friends.

**Wednesday, July 29<sup>th</sup>** — We had camped on the hill, so started to climb still higher, hoping thus to cut off the bend, and in a large measure succeeded in so doing. It was slippery work, for the ground was very dry and even the moss was ready to tear away from the rocks. Here again we had to ascend by hauling ourselves hand over hand by brush up the steep side. By 2 p.m. we got our first view; it was of the range of which Crown Mountain forms a part. There is such a cluster of great towers that to pick out any special one is very difficult. We may have looked upon the Crown and yet not have known it, for a mountain looks very different from different aspects. It is from Cape Mudge that the appearance of a Crown is most vivid. A while later we worked over to the east, and then could see through the timber below a part of the lake itself. Across the water rose up another mighty range. Now the question was how to get down. It was delicate work, for a slip meant, more than otherwise, a drop big enough to knock the life out of one. We took to the gullies mostly, where, root by root, we lowered ourselves down. We travelled fast, but the bottom never seemed any nearer, so we left the final stage for the morrow, camping in limited space by the side of a torrent, having added another six miles to our credit.

**Thursday, July 30<sup>th</sup>** — It took all the morning to reach the lake, going down hill almost at a run. In such work deer trails are most useful, as like those of the Indians they are safe and sure. At noon we struck the great basin of water, coming out just where we surmised we would, some three miles from the foot, and where Mosquito River pours quietly after passing through a deep canyon. It is the largest of the rivers that feed the lake. The axe men went to work upon a raft and had nearly completed it by evening. We determined to get afloat in the morning and see what fate awaited us at the foot of the lake. As to walking round the edge of the water, which some may suggest the quicker way to make three miles, it was an impossible feat, for on the side of the lake which we were on there were mountains of rock running sheer down into the water. Rafting was the only means of progress, since no canoe came round the bend to meet us. Where we had come down to the lake there is considerable level land with open timber, but seemingly all under water for some way back to the hills when the waters of the river and lake are high.

**Friday, July 31<sup>st</sup>** — A few last touches to the raft and it was brought round to the camp, packs laid on and we were off. There were no oars this time, so we poled along as best we could and where the rocks broke the shoreline, swept the water with our rods. We came across the usual number of sawbill ducks, also the ever-present loon. Trout were very evident. The mountains carry little timber, the rock being bare and of a reddish colour. The lake is long and narrow, and keeps a straight course till near the head and foot, when it bends slightly from its general lay of north and south. From where we were could be plainly seen the tall peaks we had been amongst when on the divide between East and Mosquito Rivers. Poling close to the shore we came across the 120-mile cairn and post of the E. &

N. Railway grant, placed there by Mr. Ralph <sup>110</sup> and his party in 1892. This was a touch of the outside world, which we appreciated after days in the lonely wilderness. Till lunchtime the water was absolutely calm, but then a sharp breeze sprang up which made the last mile and a half hard going, the waves lashing our decks and making things very lively for us. Once, however, we turned into the bottleneck where the trail from Elk River comes out and the Campbell River commences, we were in smooth water again and a current to help us along, and reaching the foot we jumped ashore to find no one about, but only some remnants of the camp of surveyors of 1892, such as old boots and pans and tent poles. There was, however, one very useful, thing, a 'dug-out' large enough for three men; this was tied to a stake and a paddle attached, but the rafts made had evidently been carried down the swift Campbell River by flood waters, and such, we made up our minds, the eventual fate of ours would be though we staked it safe and strong to the shore. It did not take us long to make up our minds what course to pursue. With only a handful of food, we should have to make a rapid push down the valley, for going downstream in the canoe was out of the question, perhaps meeting our party with supplies *en route*, or else having to make clear out to the east coast before proceeding further inland. We were aware that the Campbell River has to be crossed in two places within five miles from Buttle's Lake by any desiring to reach the latter from the Upper Campbell Lake, and we knew from report that any trails hereabout were not easy to find, so took it for granted that one of these two courses had been too much for our men and throwing on our packs, started down the trail along Campbell River. Two miles brought us to the first crossing and also to a heavy downpour of rain, which had long been threatening. This was but the second time we had met with rain during the entire month. We found near the bank an old camping ground, with trails leading every way. We essayed several, hoping that they might lead us to some special fording place, but we finally had to come back to one, and face the question of how to get across. It was getting late; the rain was heavy; we had no time to lose, so we decided to take our chances there and then. We preferred to wade in our full kit, for the mosquitoes were furious, so tightening our packs and putting matches and perishables in our chest pockets, we marched in. We very soon found that without poles we would be carried off our feet, and with a pack this would mean something serious for he who should go under water. So with long staves we tried again, and got nearly halfway across, only to find the water above our waists, reaching our packs and getting steadily deeper. The rush of the stream made it hard work to keep from being lifted off our feet. Each step had to be fought over. We had made a good effort, but it was useless; we would have to cross on a raft, so the order was given to return, but to return in such a mill-race was easier said than done. With care and effort we got round and back to shore, sorry sights. Any further attempt to cross we left till morning. Our attire as we stood up for our frugal supper, with the rain coming down, will not allow of description. So ended one month of our outing. We had visited Alert Bay, ascended the Nimpkish and Kla-anch Rivers, entered Woss Lake district, gone down the Tahsis Valley, touched at Nootka, entered the Conuma Peak district, passed up Muchalat Arm, ascended the East River, and descended the Mosquito, ending at the most hidden lake of the whole Island. We had now to reach supplies, then work across country to Great Central Lake and Alberni, and so finish our journey.

**Saturday, August 1<sup>st</sup>** — The rain fell from morning till evening, drenching us again to the skin as we made our way through the bush. But across the river we got dryshod and crossed it yet again with the same luck, and each time on rafts which were of such a kind as to make the writer wonder whether the river would not after all be master of the situation. The first raft was made of six slim cedar poles, bound together with bark; there was no cross-bar as before. One man at each end, and one to look after the packs at the centre, we pushed off into the stream and began at once to rush down. By dint of hard poling and good judgment, we reached some slack water and thence got to the shore where we would be. There we staked our ship and pushed on to the lower crossing. Two miles further down

---

<sup>110</sup> William Ralph. See [W.A. Taylor, Crown Land Grants, a History of the Esquimalt and Nanaimo Railway Land Grants, the Railway Belt and the Peace River Block \(1975\).](#)

we found the spot and inside of an hour we were over again. This time we cut off two logs from an old cedar lying conveniently by, and with a cross-piece in front and one at the stern, we pushed out again into the stream. This was a most rickety concern and it seemed inevitable that the whole outfit would go overboard. But Jones has known how to ride a single log and managed somehow to make three men ride on two. Reaching shore we were driven over, by the swampy nature of the country, to the Elk River, which is a tributary of the Campbell running down from a high range of mountains through a narrow valley and passing near the base of Crown Mountain. This river we crossed by a log-jam, and thence struck across country to where a trail made by trappers passes down to the Campbell Lakes. Here we found great beaver and bear country, and found it hard and wet work getting through. Resting for lunch we again plainly saw smoke coming up the valley, and we still felt sure that it came from our party who were detained by some unknown reason from coming further our way. We struck the trail and went along at a good pace for a couple of miles, but finally it led down to the swampy lands at the head of the upper lake, where rafts and canoes had been used to go down the waters, and as night was coming on and we were soaked through, and thoroughly tired out by our eight-mile journey, we got some sort of shelter under some large cedars and made what camp we could under the wet circumstances. Our cook provided tea and a piece of bread for each as supper, and promised to give us the same rations for breakfast, but that would clear the larder out, and unless we came across our party we should have three days' travel to the coast on nothing. This was not very cheering news, together with the wet, but none of us possessed faint hearts, and we turned in determined to start early and make as far as we could each day till better times dawned.

**Sunday, August 2<sup>nd</sup>** — Those better times were very near to hand, for we had slept within a mile of our men. The air had been so heavy that the others had failed to hear our cannon go off on the preceding evening, which we had fired if perchance they should be within earshot. But this day our broken firearm stood us in good stead. It more than likely saved us from passing the camp of the relieving party. Breakfast over, we started out for a day's big tramp, but had not covered a mile before we came upon the scene of the smoke we had noticed for a week past. It was not, after all, the work of our party, for they were across the swamp lands at the further side of the head of the upper lake, but it had burned down a large trapper's hut and many acres about it. How it started is one of these enigmas of the forest that will never be solved; the trapper, we found out afterwards, had left the place long before. The smoke, despite the rain of the proceeding day, was still curling up, and following the path of devastation we soon came to the head of the lake. Here we thought we would again chance a shot before proceeding to make a raft, for further progress by land was easily seen to be out of the question. To the first shot there came no reply, but a second and a third quickly brought the sharp report of a Marlin,<sup>111</sup> and then a shout rang out across the water and we knew that our men were there. What visions in that short moment passed through the mind! Best of all that there would be no need to go so far out of our course as would have been necessary to reach Nunns Landing.<sup>112</sup> A little later Bushby appeared in a small canoe and before long two trips had been made and ourselves and our baggage carried across to camp. Soon a rousing fire and hearty breakfast made everything look rosy. The men had made most strenuous exertion to get further up from where we met them, but had been misled by visionary directions.

For five days they had been camped at the head, and finally had built a cache, intending as soon as their own supplies fell short to leave for the coast, putting up signs all round the lake directing us to where the food was stored. It had been no light task getting upstream as far as they had, and a further attempt had ended almost tragically for the leader. Up by the trappers' trail along Elk River they had

---

<sup>111</sup> [Marlin Firearms](#) was founded in the 1870s by [John Mahlon Marlin \(1836–1901\)](#). Marlin produced lever action rifles and pump action shotguns in competition with Winchester.

<sup>112</sup> Named after Fred Nunns, one of the first European settlers in the [Campbell River](#) area in the 1880s.

been told on no account to go, so as the only possible way to Buttle's Lake had been told them to be avoided, little wonder that they were not at the trysting place. They had been enjoying excellent fishing, and put in their long wait as best they could. We took a day off, mended clothes, looked over the supplies and made arrangements for the morrow. We found we had enough food with the supplies that were to meet us at Great Central Lake for us all to go back to the foot of Buttle's Lake, which would thus ease the packing and enable the relief party to reach the spot they had set out for before setting their faces homeward.

**Monday, August 3<sup>rd</sup>** — It took all the morning getting men and packs across and to where the trail commenced, as the little canoe could carry only a limited quantity and was rickety enough at that. Then we made a forced march, and by 5 p.m. were making camp at the lower crossing of Campbell River, where two days before we had jeopardized our lives on the two-logged raft. This camp was one of the prettiest of the whole trip. The timber was clear of undergrowth; there was an abundance of small trees; the mosses and grass looked specially luxuriant and verdant; and the broad stream flowing silently and swiftly by gave a finishing touch to the picture. We got through the swamp country better than on our previous effort, but hunters should note that Elk River breaks out in this valley into half a dozen streams, and trails of both men and beast run everyway. Some sportsmen left clear evidence of elk about here, for we came across a magnificent head bleached and dried out. It would be no great difficulty to get such a head out from these parts by way of the east coast, and hunters should note this valley for a season's outing after big game.

**Tuesday, August 4<sup>th</sup>** — The two crossings of the river took up the hours till noon. The two-logged craft had floated off, but in its place Jones and his assistants soon constructed a three-logged one on which we ferried over. First two men took the packs over, landing where the current swept them. Then Bushby came across lower down and the other four men went aboard. To keep the equilibrium was no easy work, and the river made merry with pants and boots, but there was no upset. At the upper crossing we found our five-cedar-logged ship, and loosening it from its stakes, three of us with packs went over first. This ended disastrously for the cook of the party, for as we swept down the stream near the opposite bank he bravely seized hold of an overhanging branch, which came mixed up with his poling beam and washed him off the deck into the river. He went clean under, but reached land safely. The rest of the party got across without a ducking. After lunch at the spot where a few days before we had dried up, after our efforts to ford the stream, we covered the last two miles to the foot of Buttle's Lake, where we made camp. We found the canoe could just hold three men and their packs, but it needed caulking, and a couple of paddles had to be made. (There is said to be another canoe cached three miles from the head on the west side.) These things done, we were all ready for the morning, when three would canoe up the lake and thence make their way over to Great Central Lake, whilst the others would return to the coast, where they had arranged for the steamer 'Danube' to call for them on a certain date. As a matter of fact, by some mistake, the steamer passed them by and the men had to foot it over thirty miles to Comox, where another steamer carried them home. Let their experience and witness count for something when they say that relief parties enjoy no 'easy snap', but are little, if anything, less arduous than what befalls those on the main line of travel.

**Wednesday, August 5<sup>th</sup>** — Buttle's Lake canoed from head to foot this day, gives ground for forming accurate knowledge thereof. It runs generally due north and south, though it winds somewhat in parts, and within four miles of the head takes a decided bend to the southwest. It varies greatly in width, but not in its widest part is it more than three-quarters of a mile. As near as we could compute by the pace and by time of travel, we judged it to be twenty-five miles in length. It is, so far as the writer's knowledge extends, the peer of all the Island's lakes in its scenic beauty. Banked on both sides by high mountains, snow-capped and rugged, there is a lower range still closer to it, covered in most parts to the water's edge with fair-sized timber. At the head there lies a mass of high peaks, a couple of them with heavier banks of snow than anywhere else we had seen on the journey. Numerous

waterfalls pour down on either side of the lake, and streams, some large, but mostly small, are in plenty. Little wonder is it that with so many and with copious supplies, there lies such a sheet of water. One of our maps shows a large island as the traveller approaches the head. We looked in vain for it. There are but three little rocks. A long neck of land runs out in this place, and probably looking down upon the lake from the hills above, this might have been mistaken for an island. It took us the day to 'do' the lake, and during the afternoon we had no little difficulty with the wind in a canoe which was laden down to the water's edge, but at first and last we had a perfect calm, and the long paddle was a most enjoyable one. At the little beaches of sand where we rested, we saw plenty of evidence that deer abound. We camped just inside the timber at the head, and the view looking down the lake from this spot is one that would entrance an artist.

**Thursday, August 6<sup>th</sup>** — The unknown stretch of land between the two lakes now faced us. We had been told to expect thirty miles, but for ourselves we put it down to under twenty. So we made up the packs, and getting into the canoe, paddled over to where the Marble River flows in. Hauling the 'dug-out' up amongst the brush for possible use by some future travellers, we took again to the woods. Here we had at once to make choice between two courses. We could follow the river up the valley and climb the mountains at its head, or we could at once go uphill, leaving the river on our right, and reaching the summit, get a view of our course after the river had ceased to be a guide. We chose the latter, which events proved to be far the best. We scaled walls all dry and managed to crawl by hand over hand to 4500 feet, into the snow again, where we camped on the summit of a ridge <sup>113</sup> which ran right into a crescent of crags, and from whence we had a clear view for many miles around. In a direct line we made but a couple of miles. It was good travelling, save that it was one constant ascent. The timber was open and the moss held us well, but with ten days' supplies on our backs, going up grade was heavy work. Lunch was taken in a spot where it required the greatest care to prevent food and ourselves slipping downhill. We could find no level ground all day. For the last thousand feet we were glad to use a dry watercourse as a staircase. All the way along we came across patches of an excellent gray marble. The timber is light, and birds and animals seemed non-existent. Once on the summit, we secured a fine view of the mountains. Absolutely no symmetry in the ranges, they run every way, and peaks abound, scarce not one clad with snow. Many just showed their heads above the clouds, which, from where we stood, had gathered far below us. Sunset under these conditions is very beautiful, but once Old Sol retires for the night there is call for a good lasting blaze. As we could find no tent poles, we made each our own bed under a balsam tree, making our mattress of twigs, which have a spring-like force and are really very easy to lie upon. The usual heather was around us, and the same small, white, diamond-shaped flower which we found everywhere on our journey.

**Friday, August 7<sup>th</sup>** — The thermometer fell very low before morning, and we were all glad of a good fire and a hearty breakfast. Then off we started along the top of our ridge towards the great crags that lay directly ahead of us. On either side of our walking ground, a valley ran, but so deep and timbered we could not see the bottom lands. Our path lay upward and by noon we had made another 2500 feet, and our ridge began to be lost in the lower crags of the Central Range. As we made our way over the snow, we had to be careful to keep in the middle of the gulch, for the snow run off in fearful gorges on both sides. Up a valley to our right we could plainly see a goodly-sized lake — Cloud Lake — a feeder of the Marble River. Ice Lake is also another feeder of the same river. Further on, and high above those lakes, amid tops of the crags, we could count half a dozen glaciers. There could be no mistaking them, and from one poured out a stream that forms the headwaters of the river we had left at the head of Buttle's Lake. We were now, so far as we could judge, in the very centre of the Island, and the writer here carried into effect the purpose of his mind — raising the Union Jack in the heart of the sea-girt land. There it floats today, and unless the winds tear it down or the snow buries the

---

<sup>113</sup> [Flower Ridge](#)

balsam on which it flies, it should remain many a year, and alongside it, in honour of that country whence men had come who had done so much to make each expedition a success, there floats the Stars and Stripes. On a slight rise of ground we selected a tree clear of branches, save a small bunch at the top. Scaling some that stood adjoining, we made an even surface with the axe, then nailed to the flags with foot nails to our pole and left them floating before a gentle breeze. Let us hope that the elements will deal gently with them and allow them to remain as a sign and evidence of enterprise and loyal feeling. Amid the snow we found a little oasis of heather and balsam trees, where we had lunch, preparatory to pushing on a while further to a higher knoll, whence we hoped to get a good view of the country past the crags and on towards Central Lake. No sooner had we lit our fire than across the snow and rocks there tripped towards us five deer, all bucks, two specially large and all with goodly horns. Their curiosity was aroused and two, more curious than the rest, came within thirty yards. For a long time they hung around the camp. Our feelings can better be imagined than described, the rifle being non-existent and only bacon in the larder. The five coming towards us in a line made a most effective sight. Later on those were joined by two more, which makes a 'record' for a group of bucks at one showing. Lunch scarcely over, we noticed that fog was rolling up from the valleys, but thought it was only temporary. However, it grew steadily denser, so much so that we found ourselves unwilling prisoners just where we were, for progress, under the circumstances, would have been madness. So we called a halt until brighter times dawned. But room was exceedingly limited and poles at a premium. However, we carved out a space large enough for three men to lie down in, and made poles out of short sticks as crooked as rams' horns, and using shoe laces as ropes and balsam boughs as mattresses, we were prepared to stand any sort of weather. As the day drew to a close and we were absolutely enshrouded in the fog, it was somewhat awesome to hear the waterfalls thundering down the valleys about us, and the snow slides breaking away from the masses above, rushing down with a roar like artillery at practice.

**Saturday, August 8<sup>th</sup>** — Where we awoke in the morning, there we slept at night, for the fog gave us no chance of escape from our lofty perch. At times it would lift slightly and once we managed to make an excursion to the point of vantage beyond, but a couple of hours' wait there showed but little. For a few minutes at a time the sun would conquer and then we noted that no higher ranges lay ahead than the one we were on. We had a visitor to our plateau during the long wait — a ptarmigan with her brood of little ones — otherwise we were left to ourselves and hugged the fire, for the thermometer ranged closer to forty degrees than we either cared for or expected in August. With the close of the afternoon, a north wind sprang up and began to make havoc with the fog, giving us hope for progress on the morrow.

**Sunday, August 9<sup>th</sup>** — The sun rose in a clear sky and we were not long in starting to our point of vantage. For beside the desire to keep going ahead, we had by no means passed a pleasant night. We had slept with all our wardrobe on us, and the writer for a nightcap had even made use of his mosquito protector — a cotton meal bag unripped at one side — but nothing availed to keep us warm. The tent also came tumbling down upon us in the middle of the night, our boot laces giving way, but we got through the dark hours at last and very soon after were off. Arriving at the point of vantage, we found them but a spur of our ridge, with the real summit several hundreds of feet higher. So we worked along the backbone and clambered up till we touched 7500 feet, thus reaching our highest grade of the trip. Thence we saw what we expected, and a great deal more. There was an undoubted pass <sup>114</sup> ahead once we could get down from our height, and half a dozen great valleys, each with its stream stretched away to the east; best of all, away in the distance, nestling among the mountains, we could plainly see a portion of the waters of Great Central Lake. We were sure that it was the lake, for it was too broad to be any other, save some wholly unknown one, which was scarcely probable. Our surmise

---

<sup>114</sup> Price Pass

was, we found afterwards, perfectly correct. Turning where we stood, we noticed the waters of Buttle's Lake, so from a peak amid Central Crags we could see at one and the same time the waters of both lakes. Great Central looked to be between ten and twelve miles off, with a good many ups and downs between us and it. Below us, at a great distance, we could see a lake of ice,<sup>115</sup> and beyond and below that another small sheet of open water. There was far more snow than rock or earth to be seen, look which way we would, and we counted a dozen unmistakable glaciers.

We could see the streams running off to feed the lakes which lie between Comox Lake and Great Central, and the range through which the pass from Alberni to Nanaimo runs. In the far distance rose the mountains bordering the Alberni Canal to the west, which run down towards Uchucklesit. Of all the many bird's eye views the writer has had from the mountain tops of the Island, he must give the palm to that of Central Crags. It lacked nothing to make it complete, and we left the summit with regret. Then came the serious task of descent. It took us all the forenoon to reach the Ice Lake, and many times we had very risky places to pass or crawl down. Finally we were locked on both sides by rocks, and the only way left was by a half mile snow slide. This we took to, and got down without mishap. We knew what awaited a slip, for below us great and small boulders bordered the lake. Once down, we walked around its banks partly on rock, more often on snow, which here was packed thirty feet deep. This we could tell, owing to the great fissures that occurred every now and then. Where a creek<sup>116</sup> led from the Ice Lake to the smaller and open one below, we rested and lunched. Then leaving the creek on our left, we kept up the pass using the snow as much as possible, as being the easier path, until we came to where a sudden drop occurs, owing to a deep gulch running north and south. We either had to go down and cross it or else work our way round two high peaks, so chose the former and let ourselves down hand over hand till we came out into the valley's flat lands. Here there was grass and heather, and many streams making towards a narrow pass out to the north. Groups of trees stood about and one group, raised above the rest, looked so inviting to wearied knees that we camped there rather than tackle the ascent at once, which had to be done if we would keep our direct line from one lake to another.

**Monday, August 10<sup>th</sup>** — Perseverance was rewarded. After ten hours' march, Great Central Lake was reached, our two companions found fishing, with a camp all snug and well-stocked with provisions. An early start and at once a stiff piece of climbing. But we felt fresh and in excellent trim, and in a little over an hour we were in our pass again, and could see the head of the lake clearer than ever. From thence onward it was one long down grade. There were six miles of descent carrying us down some 4000 feet. The time it took was out of all proportions to the distance, but then a long detour has often to be made to reach a lower level of only a hundred feet. Another snow slide came in handily, and this was the last of the snow for the trip, for afterwards the valley became much warmer. We found a waterfall useful and climbed down as far as it would allow us over its rocks and stones. Then we reached good, open timber and lunched. Noticing our waterfall poured itself into a stream running west, we followed such for a while, hoping to get more rapidly to the lake than by cutting across country. But we were led away from the lake by about two miles. However, we were rewarded for our detour by finding that the stream joins a much, larger one coming from the west<sup>117</sup> and, turning sharply, they together pour into the northern side of the head of the lake. Felling a tree, we crossed and followed close to the river till after a worrisome battle with brush and devil's club that fills the flat land hereabouts, we broke through the brush at the water's edge and came out clean at the head and directly upon the fishermen. Thus we had made the journey between the two lakes with comparative ease, which many had foreboded to be of so great difficulty. We found our party

---

<sup>115</sup> [Margaret Lake](#)

<sup>116</sup> Margaret Creek

<sup>117</sup> [Drinkwater Creek](#)

had been making excellent catches of trout during the five days they had been waiting for us, and that they were not expecting us for another couple of days. By a coincidence, this was the same date of the same month that, two years before, the writer, his woodsman, and the cook, who had worked their way across the unknown country between Quatsino Sound and Woss Lake, came upon the rest of the party who awaited them at the latter spot. We now felt that the expedition was well-nigh over, for there only remained the lake of thirty miles, and a walk of little over ten miles from its foot to Alberni. In the hundred miles of tramping we had made, we had no trouble with our 'underpins' nor had any accident befallen us. With alacrity we cast off our packs, glad to think that the great drawback to enjoyment in the expedition was almost done with, and that the burden, once a thing of the past, would be forgotten in the remembrance of a successful and interesting journey. The distance between Buttle's and Great Central Lake we should judge to be not more than fifteen miles in a straight line. We had come by the quickest route, and one that is not at all hard to find, starting from either end. What lies in that district the reader will see to be nothing but a mass of rocky crags clothed with ice and snow. What flowers manage to exist are few and far between. Timber there is none to suit the cruiser, nor would the mineral hunter be any more satisfied. But if any man desires to see the very centre of the Island, the path thither is now made known to him, and if he be a lover of scenic beauty he can get there all he wants, together with more stiff climbing than most men care to do.

**Tuesday, August 11<sup>th</sup>** — We were a lazy crowd this day, taking one of our few days off duty. A thirty mile paddle did not look tempting quite so soon after wrestling with rocks and brush, so we canoed about and fished and washed garments and turned in early to be ready for a start betimes<sup>118</sup> in the morning in order to get a long way down the lake before the wind should spring up, which is its afternoon custom.

**Wednesday, August 12<sup>th</sup>** — A calmer day could not possibly be imagined. Our wind theories were all wrong. Starting by 6 a.m., we went down at an excellent pace with a heavily laden canoe, making the entire distance by half past three. Sundry waits were necessary by the way, the most interesting one being to examine what has proved a mystery to all the Indians hereabouts as much as to all the white men who have seen it. On the face of a sloping rock facing southwest, some three miles from the head of the lake, there are hieroglyphics in large size engraved, looking like music staves and fish tails, and logs and trees and seven-branched candlesticks combined. The memory of Indians does not go back to those of their race who carved these in the solid rock. It may probably have been the work of that lost tribe, which is supposed to have in past centuries inhabited the central portion of the Island. We took a photo and a rough sketch of it, and must leave its interpretation to abler archaeologists than ourselves. As to the lake, it cannot compare with Buttle's Lake for scenery, but it certainly is considerably larger and in general much broader. Cowichan being twenty-seven miles long and Buttle's twenty-five miles, leaves, so far as the writer's knowledge goes, Great Central as the longest on the Island. Its general course is east and west, but it has very devious path. Mount Arrowsmith is the most prominent mountain as one looks east when on its waters, and Laing's Neck as one looks towards its head. Some few streams pour into it, and one fair-sized river besides those at the head, but there is a lack of waterfalls, nor are there those rocky mountainsides running sheer down from the great height above to its edge, which have so striking an effect. Its low hills are thickly covered with timber; the higher hills lie far back and thus fail to give it the usual shut-in appearance. For one thing it certainly is remarkable. On the Admiralty chart it appears as possessing a depth ranging from fifty to one hundred fathoms deep. At its foot the Stamps River flows out, soon to become for some unknown reason the Somass or Alberni River, and near the river's outlet is a large lagoon difficult of entrance, at the head of which we cached the canoe and entered the timber. After supper, owing to circumstances over which the cook had no control, we decided to pack up and take the trail across to

---

<sup>118</sup> *Betimes*: archaic, before the usual or expected time; early.

Sproat's (Klee-coot Lake), where Mr. Laing desired to secure some photographs and test the waters as to fish. Two miles and a half brought us to its banks, but finding no place to camp, we took the road towards Alberni, and in the dark covered another mile and a half, which brought us to where a log house stood possessed of windows, but without door or flooring. Here we put up for the night, leaving for the morrow whether we would seek another camp. We covered this day thirty-four miles and thus made our record journey of the trip so far as distance goes.

**Thursday, August 13<sup>th</sup>** — We spent the day by the lake, visiting some of the folk who reside there, gathering information of various kinds and photographing. We were told that excellent fishing can be secured at the foot of the lake. It was a pleasure to see arable land again, the hay being gathered in and stock grazing about. The lake is about twenty miles in length, very irregular in appearance, looking like a large arm and a short arm crossed. We did not move our place of residence, for we were now so near the final stage of our journey.

**Friday, August 14<sup>th</sup>** — As the sun rose over the hills that lie back of Alberni and the little town woke from its summer night's sleep, five lone travellers appeared, and as the Parson flung off his pack of blankets and depleted wardrobe at the door of civilization, he felt that he had fulfilled the purpose of his mind and the task he had set before him. By the kindness and help of many, he had traversed Vancouver Island from end to end.

What we found useful as an outfit:

An A tent 7x7; double blankets (grey); reflector for baking; three pails in a nest; one frying pan; two axes; ten-inch file; tin cups (one each); tin plates (one each); knives (one each); small spoons (one each); two large spoons; flour; rice; bacon; Germea; <sup>119</sup> salt; tea; saccharine; compass; aneroid; awl; Vaseline; two bandages; chlorodyne; matches in round tin; white navy beans; white lump sugar; Price's baking powder; dried apples; ship's cocoa; hard tack; needles and stout thread; nails for boots; Martin's boot grease; liniment for cuts; quinine pills; purgative pills.

Each man's wardrobe:

Heavy boots, one pair; light shoes, one pair; underwear, two pair; heavy socks, three pair; light socks, three pair; extra boot laces; handkerchief; blue jumper; overalls, two pair; flannel shirt; Mackinaw coat; corduroy hat; towels, two; washing gear.

Notes

One sack of flour will last three men a month if helped out with plenty of other food.

Loaf sugar keeps better than any other.

Butter kept pressed down and clean on the sides of the pail and placed in streams during night keeps for weeks.

Oiled paper keeps plug tobacco in good condition.

Saccharine is not nutritious, but sweetens, and is no weight.

Dried beef and cheese are useful supplies.

---

<sup>119</sup> *Germea*: a breakfast cereal prepared from California white wheat sold by the John T. Cutting Co. of San Francisco and New York.

Paper bags are useless; in place thereof are small cotton oatmeal sacks.

Two small frying pans are easier to pack than one large one.

Avoid carrying square tine.<sup>120</sup>

Small extras become heavy weights in the bush.

#### CONCLUSION.

---

<sup>120</sup> The scanned transcription has *square tine*, but this is doubtful. *Square line? Square tins?*

ALERT BAY, VANCOUVER ISLAND

## EXPLORING IN NORTHERN JUNGLES

### I. Across Vancouver, From Alert Bay to Tahsis Canal

The fight was to the death. The place was a narrow gulch amid the heavy fir forests of Interior Vancouver.<sup>121</sup> A little stream, swollen by the rain that had fallen steadily all day, ran through the bottom of the gulch. The wounded buck that I had followed with the aid of my faithful retriever, Dick, through miles and miles of dripping forest had, stopped by a bank he could not leap after his weary run, at last came to bay. Still he had strength enough left to fight, and across the stream he faced the dog as I came up. What was to be done? It did not take me long to decide. The brook was no barrier to an active man, and drawing my hunting knife, I sprang over the rivulet directly at the beast.

He was ready and with a swift motion that I had hardly expected, he hurled me back across the stream. Fortunately his head struck me, not the sharp horns that branched from it, and I landed unhurt on my own territory.

<sup>121</sup> That is, Vancouver Island.

OUR NOOTKA INDIAN STEERSMAN

Again I tried, and with the same result.

I determined to use strategy. With a rush I sprang across yet a third time, but obliquely, and in a trice was upon the buck's back and had my left arm thrown under his head with a firm hold. But the buck knew how yet to defend his life. He rolled, and then came Death and hovered over us two, watching every movement as I struggled to keep my legs from being borne under the beast and my hand with the knife to deal a fatal blow. Not a movement from the dog; it was too fine a piece of sport for him to spoil. With an effort born of desperation I got on my knees, then heaved with a left arm that had been hardened by athletics for years, till the head with its antlers came back, leaving the throat bare for the right hand, which with one plunge did its work — and the gallant buck gave up its life with scarce a tremor.

I bore the body home in the dark, for it was growing dusk ere the fight was done. There were hills and dales to clamber through, and the rain still came pouring down, and the trees gave an extra drenching, but I thought little of such small discomforts, for from the fastnesses of the mountains of wild Vancouver Island, I was bringing back to adorn our rude camp yet another of the fleet-footed deer which make the island the delight of the sportsman.

Many a time since, when summer days were on and the rifle hung upon the wall, have Dick and I gazed at that head as it looked down upon us, having passed through the hands of the taxidermist, and longed for that day to come back when we three met face to face in a gulch of untraversed Vancouver.

UNDER THE WHARF AT ALERT BAY

J. W. LAING, M. A. (OXON.), F. R. G. S.

The island of Vancouver is a part of the province of British Columbia and possesses its capital, the picturesque city of Victoria. The western shore of the island feels the full effect of the Pacific waters, which cause numberless inlets, fiords, and arms, cutting into the island in places for many miles. Such a cut is the Tahsis Canal, the continuation of the well known Nootka Sound. This canal runs up along Nootka Island until it leaves but thirty miles as the width of land between the western and eastern waters. It was from Alert Bay on the east side to the Tahsis Canal off the west that the trip was made which we now attempt to describe, a somewhat longer journey than a straight cut across country, since Alert Bay is some distance to the north of the Tahsis, so that the course of travel was south nearly half the way, then a bend to the west with a final run again to the south. Here it may be well to state the particular route taken and follow later on with incidents and description.

Alert Bay, our starting point, is on Cormorant Island, between which and the island of Vancouver runs

Broughton Strait. Crossing this, one arrives at the mouth of the Nimpkish River,<sup>122</sup> which we ascended to the lake of the same name, a large and long sheet of water. At its head flows in the Klanch River, which led us up to where the Woss River switches in. This followed, we came to Woss Lake, some ten miles in length. Then a mountain pass had to be climbed from the western side of which Tahsis River leads. We followed down through its beautiful valley to the head of the Tahsis Canal, which is practically the end of the trip across, but really Nootka Island with its Friendly Cove at the extreme southwest has every right to claim being part of the island of Vancouver, for a very narrow passage alone causes it to be other than the continuation of the Isle, and originally when first the land was upheaved from the sea, there seems to have been neither Tahsis Canal nor narrow gut. So we made down the canal and did not feel that the trip was actually complete until we turned into the cove, against which the mighty swell of the Pacific thunders and breaks the whole year round. A strait, three rivers, two lakes, a canal, were the forms the waters took to help us over, and it might seem at first thought that such a trip would be easy enough

REVEREND W. W. BOLTON, M. A. (CAMB.)

<sup>122</sup> Also spelt *Nimpkeesh*.

for even weak ones to undertake. But let experience say that waterways have their difficulties and call for stamina and pluck.

We were a party of five — two Americans, two residents in California, and one Victorian. There was a woodsman, a cook, and a photographer among us. Indians were not taken, but we hired them as they were needed. The tribes which live around the coast are fishing Indians. They naturally take to life on the sea and rivers, but have no great love of land travel. When hunting deer or bear, they rarely

THE CHIEF OF THE NOOTKA INDIANS WITH ONE OF HIS WIVES AND TWO FRIENDS

go far from where their canoes lie, and get farther than a few miles from the coast on either side only when they determine to visit their fellow Indians who dwell on the other side of the mountains. The Island may best be described as being a mass of mountains thrown up every way, save that there is a distinct backbone, running north and south, of crags and peaks higher than those which run down each side to the sea. The northernmost thirty miles and the southernmost fifty miles are comparatively level, but this leaves 190 miles of the most rugged country anyone wishes to see. Between the ridges our waterways ran, and across the backbone we climbed by means of a narrow pass, so that the way we went and what we saw is a very fair sample of what Vancouver Island is.

Leaving Victoria by the steamer Danube late at night on July 1st, we made our way by the passage, touching at the city of Vancouver on the mainland, passing Texada Island with its mountains looking dark and forbidding as ever, taking in coal at Union, and after resting there over night found ourselves at the historic Discovery Passage by breakfast time on the 3rd. Here it was that the Spaniard and the Englishman met, more than a century ago, as they sought out nautical information for their home authorities. Vancouver's travels are

as good as the most interesting novel, and not the least interesting is his graphic account of finding that the land he was sailing by was an island. Discovery Passage, or, as it is now known, Seymour Narrows, was indeed a discovery. What it led to, neither the Indians to the north or to the south of it knew. Such a whirl and rush of waters was, in their minds, under the patronage of some evil spirit. It was left to those intrepid white men to discover in 1792 that the waters from the north and south here meet, and that once through, the traveller can make delightful way by strait and channel as far to the north as Alaska.

Vancouver tells us how the ships ran aground, how hard his officers and the Spaniards worked in the boats to make the passage, and with what sense of triumph they at last overcame all difficulties, and rested in the quiet waters above the narrows. Nowadays there is only need to catch the proper time of

tide and put on a full head of steam, and away one goes into the swirl. The steamer rolls and tosses and only just creeps ahead; there are ugly rocks here and there which makes the man at the wheel keep a wary eye, but steam triumphs, and the channel widens, and all is easy going till we cast out lines at the wharf of Alert Bay cannery as the afternoon wears to a close.

TAH-SIS MOUNTAIN AND RIVER. ALTITUDE 4,800 FEET. VANCOUVER ISLAND.

A splendid place for salmon is the mouth of the Nimpkish River, which pours out exactly opposite the bay. But like all such grounds, the run of salmon is very uneven. One year there are not enough cans to put up the catch; the next year the men are well nigh idle. This was a bad year here, but at River's Inlet, farther north, there were multitudes of fish. The cannery folk received us most cordially, and soon introduced us to the chief of the Indian village, with whom we had to deal for a canoe and polers to ascend the Nimpkish.

KOWSE GLACIER, HEAD OF WOSS LAKE,  
ALTITUDE 5,000 FEET

This arranged, we took in the sights of the town. It does not run very far back from the beach; a single line of shacks and houses fills the bill. At one extreme end is the Industrial school, where the children are taught the good traits of the white man and a trade, and the other end is the cemetery. The cannery building is the most prominent structure, but the English church is picturesque in its outlines and its site. The chief's shack is humble alongside some of the others, and the large totem pole adorns another house than his. There are two other poles, but they are uncarved save at the top, which takes the form of an eagle in each case.

We were at some pains to learn the intent of these poles, as well as the wonderful works of the carver's art which the burying ground contains. Fish and fowl, biped and quadruped, trees and hideous features, all are made use of to adorn a tale. What that tale is, seems to be nothing more than the ancestry of the individual alive or dead. Take as an instance Alert Bay's large totem. Commencing from the bottom, there is a fish, whose lower jaw opens and becomes the door to a shack. Then follow a bear, a man, a crane, a wolf, a whale and an eagle.

This is the lineage of the owner. When he goes visiting other tribes, he takes along with him a miniature of his totem and presents it as his passport for recognition and a place at board or feast.

According to the Indians hereabouts, at first there was nothing on the earth but animals, with fish in the sea. Then a Being appeared who turned some of each tribe of animals and fish into man. The owner of this Alert Bay totem therefore claims that his first ancestor came from a fish, and in time, after marrying in their own tribe, his descendants intermarried with the eagle tribe. For although the lowest figure of a totem is the first, the highest is the second, and then one has to read down. The children of the fish and the eagle in time branched out and took wives of the whale tribe, and so on till the maker of the totem appeared, whose mother was brought in from the bear tribe. Thus whilst the family tree is given, there does not appear any means of calculating the full generations of the ancestry, but this may yet come to light as the Indian overcomes his dislike to give his knowledge to the white man.

It was 'the glorious Fourth' when the real journey commenced, and very early we made a start. Our canoe was much too large for river work at this season of the year, when the water is necessarily low, but one canoe was better than two small ones and it only meant a little harder hauling and much more

acquaintance with water. We were blest with two chiefs, the head of the village and a younger man from a nearby rancherie. They were capital fellows in their way, although they did carry most abominably stale fish as their food and the elder worked little save at times when a crisis arose.

NIMPKISH OR KARMUTZEN LAKE

Seven of us made the craft skim across the strait and then we entered the Nimpkish River. Here at the very mouth were the remains of the old village of Cheslakees, well situated and able to withstand many a foe. For in days gone by the Indian tribes were ever at war and would swoop down upon their enemies without warning. The traveller meets with a fortress nearby every place where now the Indian dwells at peace. Some of the sites are evidence of great strategic skill, and to what Nature has done, the warriors added till their stronghold seems to have been impregnable. Two especially remarkable fortresses are to be seen at Cape Commerell and Koprino. But Cheslakees was a good one in its day. Here Vancouver landed and was fêted by the chief and spent a pleasant time, as his book of travel shows. Now it is all overgrown with bushes, yet the great beams of the shacks still stand, silent reminders of past glory.

It was not long before the paddles had to be laid aside and the poles brought into use. There is so much art and knack in the use of these that novices were ordered out and had to make their way through the forest on either side. When a specially rough rush of water was met, we were made use of; a long rope attached to the bow was of great assistance with strong arms at the other end.

The Nimpkish is a swift, broad stream, very tortuous in its course, with some pretty 'reaches' every now and then. The old chief seemed to know the best way by heart and could tell us just the spot in a rapid where the bottom was best for poles to hold firm and the passage between the rocks the safest. To a new hand there seemed time and again no chance of escape from running on a boulder; with a rush we went at it and then, when but a few inches from a collision, a swift movement with a pole

and we swung past and above the rock. We passed the summer residences of the tribe — sometimes a solitary shack, at others a few combined. They combine by means of the immense ridge poles used for roofing. Three or four huge erections of wood with a hole in the top of each for a chimney form an ungainly looking row of villas. Cedar is chiefly used for the outside boards. These are nailed upright and not seldom have a goodly-sized gap between, good for ventilating purposes.

CAMP ON KLA-ANCH RIVER

We took lunch at the Nimpkish Lake, on a sandy beach under a roasting sun, then putting up a mast and a sail that landlubbers would have said was twice too large for the boat, we flew up the eighteen miles to the head of the lake, lying low down amidst our packs and grub. The wind is very variable in these mountain lakes. The towering hills on either side will change the wind in a trice, and the sheet must be loose and in knowing hands. The old chief made himself comfortable and went to sleep; the young chief did the steering. Only very rarely does one see a rudder on these canoes, but a paddle is every whit as good, though at times it is hard work on the arms. At the head there are rivers pouring in, the Kla-Anch, coming from where we meant to go, the Anutz, showing the way to a series of lakes, culminating in a beautiful sheet of water, Atluck Lake, which two years before we had rafted on as we made our way from an elk hunt to where the rest of the party awaited us.

We were inquisitive to ply our steersman with names for every stream we came across and not one but had its nomenclature. As neither white man nor Indian could speak the other's language, there was no end of gesticulation and endless times each name had to be pronounced until we could spell it out for the notebook. It is the way of Indians to have a separate name for everything that catches the eye of a traveller. It is their compass. Often they will leave game where shot, and going a long distance to camp, can be sure of another finding the spot and bringing in the quarry, for the name of the hill or the bend of the stream is enough. Their country is an open book to them and every child is trained to be well versed in it.

The next morning we turned our canoe into the Kla-Anch and had a good day's work making our way upstream. We spent far more time in the water than either on land or in the boat, and as we neared camp time, we came to the worst rapid of all the hundred we forced our way through. Looking at it from below, we did not well see how we could ever surmount it. The water charged through a narrow passage between rocks that ran up thirty feet on either side. Such a foaming, surging mass that seemed to dare us to try its strength and promise the liveliest kind of tussle.

WOSS LAKE FROM THE DIVIDE. THE VIEWPOINT IS 2,000 FEET ABOVE THE LAKE.

The old chief was wary; he made us lighten the canoe so that only he and his aide were left, then out came the rope, and scrambling over the rocky side, we hauled with might and main, those in the canoe steering it off the side with their poles, but shipping lots of water and jumping every way as the billows struck the craft. It was a goodly sight as we stood above the chasm. The roar of the waters drowned all words of command, but it was simply a matter of hauling hard and in due time we had the canoe by the bank and in quiet waters. Not till we had to portage our goods over these rocks did we realize how much stuff we had brought, and silently registered a vow that before we commenced steady packing, we would part with many things that at the start seemed indispensable.

Another day of similar experience we went through, wet to the thighs, the nails of our boots worn to nothing by the rocky bed, creeping along the banks, hauling at the rope the while, sometimes having

to cut our passage through the bush with the axe. Occasionally the canoe would answer all too quickly to the heaving and then there would be an utter collapse of those at the rope's end, much to the delight of the Indians, who love to see the white men 'bested'.

We grew to like these two, only they still would keep those horrible fish for provender, and at meal times would steal our fire. Nothing escaped their vigilant eyes. They would point our fish in the stream when we would have passed by; they would show you a twig moving, and there would creep out a coon; they could see a duck on the river when our eyes were dazed by the shimmer of the sun. As to making camp, they were through in a trice. The sand was good enough as a bed and the sail was their tent — no 6x8 for them; we could have jumped over their sleeping apartment with ease. We rested at the forks of a new stream with the high sounding name of the Koona Kooma Sitch, where mosquitoes held high carnival and a light rain added to the charm.

NIMPKISH RIVER RAPIDS

Partings have to come, and on the fourth day our dusky friends bade us adieu — taking along with them our bacon. Perhaps this was done by mistake; perhaps because we made them so many gifts by way of lightening our packs, they thought to add yet this charity to burdened backs that our weightiest grub should balance their canoe. Anyway, they got away with it and before we discovered our loss, they were whirling downstream miles below. If they knew not what they did, then we must forgive them, for it was not to be expected that they should attempt to re-ascend where seven men had found it difficult to creep along. But no more bacon did we see, that stand-by of the voyager, until the trip across the isle was done.

We had anticipated a log jam somewhere or other on the way up, and we came across one this day that fully satisfied us. First of all we sat upon it, then smoked over the situation, then cut our way through the great logs with our axes, and finally set it all afire. How the water could ever bring down such immense trees was a puzzle, and how ever they could climb up one on top of another remains a mystery. But Nature's wrathful moods in winter are no match for the axe in summer, and we left a goodly gap for the Indians to slip through on their way home.

By lunch time we were at the parting of the ways, and although there was the Woss River to be followed up before we could reach the lake, yet there was too little water in this side stream to allow our large craft to float. So packs had to be made up, and backs unused to bundles had to bend to the ordeal. We were obliged to make through the forest to the lake and keep away from the river, for the brush was dense by its banks. To the uninitiated, a pack is a most troublesome weight. A man will boast of the steadiness of his 'pins' until a sack of flour is on his back, then all his boasting is thinnest air. He totters, staggers, stumbles, rolls about, takes headlong falls, topples backward, groans aloud. He thinks everyone else has less burden than he; declares his whole journey a folly; calls himself names, an ass, a mule, a packhorse; wishes he had no insides demanding provender and that Adam's primitive wearing apparel could be his. He tries to creep under logs, but finds his hump jams him tight to earth; he essays to throw a leg over the log and goes headlong over, the hump pounding him when going down like the great bully that it is. His feet find every hidden twig and he is positive that his boot nails are worn to nothing; he lives only for the time when the long haul shall become the short rest; and when the order comes for 'camp', he heaves off his pack straps with an alacrity he never thought before he possessed, and straightway seems a yard higher and a dozen years younger than before. But we got there all the same, the tyros as well as the veterans, despite having to sleep a night on the way with myriads of mosquitoes to make the night hideous. We disturbed deer by the way, but gunning and packing do not go well together. And when on the morning of July 8th we stood at the foot of Woss lake, we were rewarded for the last few hours by the picturesque scenery on every side.

But whilst the photographer was busy with his kodak, there was something more serious for us to consider. Here we were with a lake ten miles long, no chance of getting along its sides and no canoe to skim over its waters. A raft had to be made and then the wind had to be favorable, which it might or might not be today, or tomorrow, or for a week. After prospecting for awhile, we selected our ship yard. It was not the tidiest, being the receptacle of many old bones of trees, but it answered its purpose well. Our craft consisted of four main logs, fourteen feet long, with a flyer at one side. These were held together by two cross pieces, dovetailed in. The rowlocks were similarly fixed. The only instruments used in the building were our two axes. Not a nail did we possess, nor a cord either. Poles were then made and a platform for the packs. Then evening came and we made a pleasant camp.

Early we were at work cutting oars out of stout limbs and shaping them off with jackknives. Then just when we were ready to push out, the wind sprang up and blew against us all day. It is worse than useless trying to raft against a headwind; it is uselessly dangerous. Twice we tried it, but soon found that it meant a foundering of our craft, so we whiled away the time till after supper, when just as the sun was setting, the wind fell and we went aboard, two at the poles and two at the oars.

Once off we found there was no chance to stop, for a mile from the foot of the lake the sides are so precipitous that there is neither landing place nor camping ground. So we worked on hour after hour, till darkness set in and Nature went to sleep. Still we rowed and poled, feeling our way along the western side, creeping around headlands, not venturing to cross the bay. Many a snag did our front poler ward us from; many a stream swept us out of our path. The night wore on, for rafting is slow work, and not till 2:30 a.m. did we reach port. It was inky darkness when we turned into the hook that forms the head of the lake, and so tired were the crew that after lighting a big fire and cooking some

cocoa, we lay down on the shingly shore hard by a glacial stream and slept as soundly as on beds of down.

Boating at night has its drawbacks, but it also has its compensations. There was a weirdness about this row that had its own charm. The splash of the oars and the swish of the poles were the only sounds that broke the stillness, save every now and then as we came near some great waterfall leaping down the mountain's side and tearing its way over a rocky bed to the lake.

The photographer got ahead of us in the morning and not only secured a picture of the sleeping beauties, or rather bundles, but taking the fisherman's rod and reel, caught a fine mess of trout for breakfast and then took in the sights. There is so much beauty in this little spot that we were glad to spend the whole day here. Kowse Glacier on the summit of Rugged Mountain is alone worth going many miles to see and then, added to it, there are the waterfalls, which seem coming down everywhere, joining at the base into milk white stream that was altogether too cold to sip even under the midday boiling sun.

MAP OF A PORTION OF VANCOUVER ISLAND

The dotted lines indicate the discoveries made by the Overland Explorers. The shaded portions indicate lakes and rivers on the official map that are not to be found. The route of the Bolton-Laing party was from Alert Bay to Friendly Cove.

Our camp was just inside the timber at the base of the mountain pass which we had to follow up and down to reach the Tahsis Valley. So on the morrow we shouldered packs again and began the ascent. It was a case of hand over hand in most places, and the undergrowth was so stiff that we made slow progress. We soon reached the snowline and here we had a bear hunt. Coming out of the timber into an open area of several acres of shrub, running up into the snow, such as elk love, we were all on the

lookout for such big game when we espied a black bear, an immense fellow, making hasty tracks along the farther edge of shrub towards a precipitous ledge of rock. He was on it in a trice, and the happy possessor of the rifle, pack on back, took no thought of the weight behind, but fired, hitting the beast hard, for he tottered beneath the blow, but not quite far enough forward to bring him down. Then off with the pack, but a second shot fell short and by this time bruin had got to cover. Nothing daunted, the sportsman hied him up the snow and along ridges on which in cooler moments he would have considered it madness to attempt to crawl, and sought diligently an encounter face to face. But all of no avail. Bruin was master of the situation and knew his home too well to get within view. Down below were the men waiting for their meat, and high above worked the hunter — but in vain. Sadly we pursued our journey and regretted wounding what we had not killed, and the suddenness of the whole affair which gave no time for the harmless kodak to take one lasting shot.

Soon after this we reached the summit, whence a delightful view of Woss Lake was obtained, and then we commenced to descend. We came down on the ridge that is bounded on each side by the sources of the Tahsis River. And such a coming down — we did almost as much sliding as walking, elk trails were useful, even the smaller deer trails were not despised, and by evening were at the head of the valley proper. Had it not been for the packs, the journey down this wide and beautiful valley, which took up a day and a half, would have been delightful. It is a valley of ferns and open timber with streams running everywhere, later on to join in one and pour out into the canal.

We were so used by now to water that we waded the streams as if they were dry land, and not until we were within a mile or so from the mouth of the river did we encounter any serious obstacle. Then we came to such precipitous sides that packing was out of the question, so two of us went ahead down to the mouth, making our way as best we could along the mountain sides and finally fording the river up to our waists so as to reach the Indian rancherie, where we hoped to find Indians who would bring the packs and the other men down in canoes. The rancherie was there all right, but never an Indian; they were all at Friendly Cove, thirty miles down the canal.

But something had to be done, so after prying through the cracks of the houses, we espied a tiny river canoe, and using gentle force, opened a door and committed burglary. Two worn paddles were pressed into service and then, carrying our prize to the water's edge, we got in.

It was touch and go whether we should not go out, for we were both tall men and somewhat weighty. But by lying down very low and being careful not to even wink an eye, we got some distance up the river, when the rapids commenced and we to pole. This was altogether too much for the balancing power of one of us, and he preferred to pole himself on his own legs upstream and did so, the other making the journey safely to where our men awaited our return. Then putting the packs in the canoe, the same good boatman swept downstream, the others making their way along the banks, and all reached the canal in safety.

So we crossed the Island, but as Friendly Cove is to all intents a part of the Island and it lies on the real western coast, we did not consider our journey done till we had sailed down the canal and entered the well known cove.

But how to get down? One little river canoe that could scarcely hold two, and five men with their stuff to go. We hunted everywhere for more canoes, but none could we find. So we came to the decision that two should go down to the cove in the rickety craft and secure one large enough to carry all, and the same two started out the next day at dawn.

We carried our life in our hands and nothing but similar need would ever make us take similar trip again. We were seventeen hours battling with wind and tide, although for the morning hours we had everything our own way.

Not half a mile from the camp and almost opposite the rancherie, we came across a buried Indian, and as it may sound strange that we should see a 'buried' party, we venture on a short description. About a dozen yards from the water, a small canoe was seen wrapped round with a white sheet and tied up in a slanting direction to a tree. The entire wardrobe of the dead Indian was hung around on separate branches. His garments never were so numerous, but such as they were, they followed him to his place of rest. Above all these, in another tree, was a box, somewhat hidden by what might be taken for the front of a drum. Reverence forbade any very close inspection, but inquiry at a later period elicited the information that this is a very common method of burial with the Nootka tribe.

For the first ten miles down the canal we use paddles, then were glad to be relieved by a slight breeze. As we had carried nothing that was not absolutely necessary, we had neither axe nor rifle with us; our only freight was a tarpaulin in which were wrapped our blankets, and our food consisted of a little cocoa, some bread, and beans. Determining to try sailing, we ran up on a beach and made mast and sprit with jackknives, then rigged up the tarpaulin as a sail, and a capital one it proved. During the delay, we had interview with three deer, which came so close that not a dozen yards parted us. They were out for their morning walk and frolic, and had a rare good time, gamboling about and playing a game of 'tag', every now and then coming over towards us and sizing up our intent. Pushing off, we were bowled along for another ten miles, having many a close shave of 'turning turtle', but reached a large bay by noon, where the wind turned against us. Now came the real work of the day. The last ten miles took us till 10 p.m. Once out of the quiet bay, we had to face the ever restless waters of Nootka Sound. We kept close to shore, creeping around the headlands at imminent risk of utter collapse and with an expenditure of muscular force that called for frequent halts. The cockle shell was not meant for deep sea work, and no one was more astonished at the journey we made in it than the owner, when she saw her little river craft had been pressed into such a service. But the Indian shakes his head when he sees white men tackle what he would never do, and there is a look in his eye, as much as to say, "Where ignorance is bliss 'tis folly to be wise."

Driven to shelter about 5 p.m., we had five o'clock tea (or rather cocoa), then pushed ahead again. Two canoes of large size came out from the bays and passed us on their way to Nootka, and despite our efforts to make them understand that we would like to combine forces, they either did not care to or really could not help us. They seemed to have almost all that they themselves could do to get round the points of land.

As the sun set, the wind began to fall and by dint of steady paddling, we ran behind some small islands into comparatively quiet waters. By 9 p.m. we passed the last of the islands, and in pitchy darkness had to come out into a heavy swell and make a dash past two more headlands, the last of which was the entrance to the cove. We reached the first, shipping some ugly seas and escaping many a rock by inches, and made a dash for the second, but it was no good; we seemed in a nest of rocks, and seaweed caught our paddles at well nigh every stroke. It was too dark to find the proper course and to go clear out into the sound would have been madness, so within sound of the barking of the dogs at the cove, we ran up on a little beach, hauled our canoe out of danger, and crept up amongst the rocks and sal-lal to find a resting place.

One might venture the remark that since we were so near the goal, a short walk would surely have been a wiser course than sleeping out in our blankets, but no one who knows the nature of the west coast of the Island will wonder that we did not attempt to fight our way through the undergrowth at ten o'clock at night. To find six feet of room for each of us was no easy task. One of us slept with his

feet hanging over a twenty foot drop, a rock sticking into his hip bone, and the tarpaulin sheet for a pillow. The other fellow lay hopelessly mixed up in chaparral and twigs. But we slept till the day began to break, then crawling down to our canoe, got away from rock and weed, and despite the tide that was now sweeping out of the bay, turned the last point and entered Friendly Cove.

The village was still asleep, only a few dogs and crows about, so to while away the time till the place should wake up, we strolled down the high street and took in the sights. Of course, we were also compelled to take in the smells. Fish everywhere, dead on the beach, drying on the rails. To smoke became a necessity and we kept up the fumigation until Goss, the white man, opened the door of his store. Then we got to work, first at breakfast, afterwards at securing Indians and a large canoe, and by 10 a.m. we were ready to start back to fetch the rest of the party.

It had not taken long for the Indians to know where we had come from, and soon we were surrounded by a crowd of jabbering ones, all demanding the purchase price of the canoe we had burglarized. Goss came to our relief and we found the real owner to be a young girl with a face besmeared with vermilion — used by the ladies to preserve their complexion from the sun's rays. Her father, mother, uncles, aunts and cousins all helped in the discussion that ensued. The duty of purchasing the canoe we scouted. Then \$5.00 was demanded as the hire. We offered seventy-five cents and it was gratefully accepted and spent forthwith in the store on apples and candy.

Our new companions were typical of the place, a young fellow, tall, muscular, who had laid off this season from sealing in the north, and an old man, wiry and efficient, with a light and singing heart. Up the canal we flew under two great sails and had a deer hunt on the way. We noted a deer swimming round a rock, and putting on the pace with the paddles, we got near shore just as the deer had shaken itself dry and began the ascent of the mountain side. The younger Indian shot wild at first, but finally brought the game down, and we hauled the carcass aboard and worked our way up, now against the wind, arriving at the camp in time for supper. There was rejoicing all round, for the Indians had deer meat and we had bacon, and the morrow would surely mean a delightful sail.

And so it proved. What had taken us, in the little craft, a long day to cover, we came down in under four hours — a fitting end to our trip across the Island and a most interesting place to bring it to a close.

The afternoon and the hours of the next day flew by as we gathered information, took photographs, bought curios, visited the shacks, and made lasting friendships. The Indian has so keen an eye to the main chance that despite his anxiety to be photographed, he was keen to know how much he was to be paid for the sitting. The chief is a study in himself; he is not endowed with good looks nor virtues that should be imitated. He is the last of the old time Nootkas, who were so fierce and cruel. Many a ship's crew fell before their rude weapons; many a pirating expedition ended for them in complete success. The book of one — Jewett <sup>123</sup> — who spent two years of captivity here reads better than most novels and tells of what wild stuff those Nootkas were made.

This particular specimen has eyes which bespeak an ugly nature, and woe to the man whom he should even at this late day consider an enemy. His palace is an immense shack, the front bedecked with the ornamentation of the sun, the inside barren of all adornment, with benches extending all along the walls, his own bench at the far end, whereat he works making the most beautiful sea otter spears. Outside lays an old Hudson's Bay cannon, unmounted, a relic of the past days of trading, and for our

---

<sup>123</sup> [John Rodgers Jewett \(1783–1821\)](#). See [The Captive of Nootka. Or the Adventures of John R. Jewett \(1835\)](#).

benefit the chief arrayed himself in a naval officer's suit, a gift of long ago. He is a polygamist and the law does not seem to care to interfere with him.

But he and his kind are fast going to the wall before the march of civilization. The young men are all sealers on white men's vessels, and returning, they are not content with the ill-built shacks, but are building for themselves houses of brick. They leave blankets alone and despise the dogfish oil and dried halibut. But sickness is working havoc with them all. They are nearly all consumptive and nearly every house has need of the physician. The priest and the witch doctor divide this honour, and whilst the war goes on between these two, the sick drop off one by one.

It was a strange sight in the morning hours to watch the ablutions of the cove performed. Nootka is not a place where delicacy resides. Every man takes his bath in public, and since towels are unknown, the sun is called in to take their place. It was curious to see the little dark-skinned figures sitting huddled up on the shore, drying off on the hot pebbles.

When the blanket, seemingly the only garment in many cases, has to be washed, it is taken into the sea, and after thorough soaking is laid out on the beach and beaten with a long stick. Then the owner lays it out in the sun and he and his await being dried by degrees.

There are no totems at Friendly Cove, but a really remarkable carving in wood of a lad, full size, stands before one shack, so lifelike with a broad grin on its face that until it is closely approached, a visitor is deceived into thinking it real and interested in his coming.

Of course, curiosity was mutual and we had to bear with a crowd gazing at our every movement, watching us cook and eat, overhauling our goods and chattels, and from the look on their faces and incessant jabbering, making joke at our expense. This we bore with equanimity, for we realized we were a strange and tough looking crowd and were glad enough to think that none but strangers saw us after our trip across the island of Vancouver, a journey of just twelve days, but filled with memories that we shall cherish for our lifetime.

*W. W. Bolton and J. W. Laing.*

TLUPANA ARM NEAR THE MOUTH OF LAING RIVER

## II. The Central Crags of Vancouver

A map hanging in the Lands and Works department at Victoria, the capital of British Columbia, gives the central mountains of Vancouver as rising to 8,000 feet and more, which leaves those peaks that have long been named, such as Victoria Peak and Crown Mountain, considerably in the lurch. This is not far wrong as we found out during the past summer; when we made our way through the district, and standing on the summit of the hills that seem to bunch up there in specially formidable manner, named them 'Central Crags'.

These mountains are a part of the Vancouver Range, the most westerly of the four great systems in British Columbia — the Rocky Mountains, the Gold Range, the Coast Range, and the Vancouver Range. They all run nearly parallel from the northwest to the southeast. The latter range is the northwest boundary of the continent of North America, as there is only a narrow sub-marine plateau extending beyond it, then a quick descent into the azure depths of the Pacific Ocean. The Island itself is 270 miles long; its breadth, from over seventy miles down to not more than ten miles. It seems naturally to divide itself into three sections, the first from Victoria at the south to Alberni, one hundred miles away; from Alberni and its lakes to Woss Lake and the Tahsis Canal, another one hundred miles; and finally from the latter to Capes Commerell and Scott at the extreme north. There is a marked difference between these sections — rain in the north, snow in the middle, and genial weather to a remarkable degree in the south. There are small timber, swamp lands, and good fishing in the north; nothing but mountains, streams and lakes, with perpetual snow, in the center; and large timber, excellent land, and good society in the south. From the sea, the central portion looks anything but inviting — mountains piled on mountains, peaks vying with each other which shall be the tallest and most pointed, huge banks of snow seemingly everywhere.

FRIENDLY COVE, NOOTKA

It was from Friendly Cove, the Indian rancherie on Nootka Island, that we made the start. This is a far-famed spot, the headquarters for centuries of a tribe of Indians who waged relentless war upon their neighbours and all whites. Here Jewett, an English sailor, was held in captivity for over two years, whose book concerning his experience was the delight of the boys of a past generation. But now all is peace, and a store of supplies kept by a white trader makes it a convenient place for a start.

TLUPANA ARM

Nootka Sound, soon after passing the cove, splits up into three arms: Tahsis, Tlupana, and Muchalat. It was from the head of the latter that our start inland had to be made. We reached there by canoe and found a broad stream flowing into the arm, coming from the east. There were three in the party, all white men; the Indian whose canoe we hired was to pole the packs containing our blankets, food and cooking utensils as far up as the riffles would allow and then return. We knew from the general appearance of the country that neither horse nor mule could act as beasts of burden for us; there was nothing for it but to turn ourselves into carriers, and we had provided ourselves with straps, which long experience had brought almost to perfection for ease and strength.

Our general course, as we planned, was as follows: to work our way, with supplies for eight days, across the Island through a tract of country never before trod, some thirty miles to a large lake named Buttle's, where we had arranged for men to meet us with fresh supplies. They were to come in from the east coast, following the Campbell River up to where the lake found its outlet to the sea. Then from the

head of Buttle's Lake, we planned to strike into the mountains once again, going straight if possible, and passing over the very center of the Island, come out at Great Central Lake, from which place an easy journey would take us into Alberni. In order that we should have light packs, we were to be met with further fresh supplies at the last-named lake, and a canoe, in order to avoid the tediousness of rafting over a sheet of water thirty miles in length.

NOOTKA INDIANS

On Wednesday afternoon, July 22nd, we made camp a little distance up the East River, finding a most convenient spot, save for the mosquitoes and the devil's club, which here attains to twice a man's height, with thorns that have to be reckoned with. The following day the real start was made, and in order to lighten the canoe, two of us took to the bush, while the third assisted the Indian in poling.

No very serious rapids were met until four miles had been covered, then an extra heavy and dangerous one seemed too much for the Indian, and although the three of us offered every assistance, we could get him no further, so dumped the packs on a shingly shoreline and watched him as the little craft danced downstream and out of sight. We, along the bank, had had a stiff fight with the underbrush all the morning, but this was slight compared to what we now encountered. We made only two miles in a four hours' struggle. Axes were constantly brought into use; clothes were torn; and the river waded wherever its depth would allow. We were hemmed in by mountains on either side, with snow-capped peaks looking down upon us. Slowly we conquered, and were glad enough to throw off our packs and camp where the stream forks, coming from the south as well as east.

In the morning, the first thing to be done was to cross the fork, and as fording was out of the question owing to the rapidity and depth of the river, we felled a couple of trees, which dropped most conveniently and made an easy bridge. Then we entered a canyon which taxed our ingenuity to get through. It is one thing to clamber among and over rocks with free hands, but quite another to have a gun or axe in one hand and a pack of many pounds upon the back. We lunched and camped in that

canyon and all the next day we were in it, finally having but inches to stand on as we crawled round the face of the rocky walls, which ran sheer up a thousand feet or more.

SCENE ON GREAT CENTRAL LAKE

After the constant roar of the waters, the quiet of the spot above the canyon was most welcome, and we rested in the timber close to the edge of the river, which flowed swiftly but noiselessly by. Another day's climbing awaited us before we could reach the divide and change from climbing up to climbing down. We had not travelled above a mile when we came to a small lake hemmed in by mountains, a most picturesque little sheet of water, at the head of which we touched the snow line. Our river poured into the head of this lake, so we ascended its course through much easier ground, and within half a mile, came to another lake, larger than the first, with a most remarkable natural dam of rock at its foot. This rock is some thirty yards across and runs back so gently that we could not tell where it began in the lake itself. The water tumbles over in a beautiful waterfall, which continues more or less to the lake below. It is a fact worth noting that the Island's streams almost invariably have two lakes in their course.

We could see ahead of us our final climb to the top of the ridge, but it was by no means inviting. At the head of the lake, the land, thickly wooded, with a surface covered by snow, ran sheer up a good thousand feet and then seemed to become level for a space, beyond which a two-peaked mountain rose up into the sky. But ahead we went, working our way around the lake and then hauling ourselves

and our packs hand over hand up the incline. It was slow work and very tiring, but once on the first ridge we were well rewarded for the effort.

Here before us was a very pit of snow; a vast amphitheater ran around it and in the center was a lake all frozen, save that we could see a stream running out to the north, which found a way to the lake below by a straight drop. Tired though we were, we hastened over to that side and looked down one of the finest, if indeed it is not the greatest, waterfalls of the Island. Snow everywhere, though a lovely sky overhead, the pit was not an inviting place for a camp, but still we made it — going without a tent, for poles were not to be found and wood for a fire was at a premium. A finer sight than the last rays of the sun striking that amphitheater cannot well be imagined, and though the night wind was cold and biting, we managed to keep warm by making a common bed and sleeping with our hats on.

ENTRANCE TO TLUPANA ARM

We were early astir and glad to push on up the farther side of the great pit, warily treading, for the snow was very hard and in places dangerously slippery. Then, as explorers ever are finding to their chagrin, we saw a great chasm between us and the twin peaks, and in it lay a large lake shaped like a balloon, with ice floating on the surface. We took counsel here as to the best way. We only knew the general direction in which Buttle's Lake lay, and could see nothing in front but range on range of snow mountains. We could travel to our right and so keep the height we were on, but we fancied that this would bring us to the head of the lake — which it would have — whilst we had to meet our party at its foot. The way to the left was certainly wrong, so we determined to keep straight ahead, although it meant going down into a deep valley. But in this valley, with its source in the lake below where we

stood, we noted a river running, which naturally made us draw the deduction that it ran into some lake, for the sea was too far off to permit its reaching such as its outlet, and by the size of the stream we calculated that it must feed from a large lake, which meant Buttle's Lake or some other that man had as yet never seen.

THROUGH A GRANITE CANYON

So down we went, and at times faster than we cared to, clinging to the short brush as best we could and making use of snow slides when we had the chance. Sure enough, we soon came to another lake, but to reach its banks had to make a desperate jump. Disaster more or less attended this attempt at long jumping, but men get used to a little water being added daily to their burden, and we clambered round the edge to the foot of the lake, to find no seeming outlet for the stream. This puzzled us a good deal, and after diligent search to make sure of so curious a condition of affairs, we climbed over the great rocks which were piled up at the spot and let ourselves down the ravine ahead. Not until we had gone down a full half mile did we see the water, which then oozed out at a score of different places from amid the rocks and soil, to go tumbling down until they came together in full form and the stream was once more itself. As we followed its course, we came upon a good deal of marble along the banks and in its bed; we had also seen this day, higher up in the snow, small flocks of a tiny golden-colored bird.

We had nothing to do but keep in this valley till we found where the river ended, but we had not miscalculated, for after two days more of working our way through the mass of underbrush, and ever and anon climbing the mountainside to escape a canyon or a waterfall too sheer for man's descent, unless a corpse, we came to where the river broadened and began to lose its rapidity, and then poured itself out into the lake where we would be.

But those two days were days to be remembered. Old hands as all of us were at bearing the tortures of mosquitoes in many lands, we can say with truth that this valley bears the unenviable palm for those enemies of mankind. They seemed to take special delight in attacking us. Perhaps they were wrought up over man's daring to enter the unknown land. They took us cruelly at disadvantage. What chance has a man with the little fiends when he is climbing up a wall, using both hands to hang by, and a gun or an axe in one hand to boot? We named, and we think well named, that valley and that river, Mosquito, and let him who disputes the right, test it in comparison with any other part of the Island, for himself.

TYEE OF MUCHALAT ARM, NOOTKA SOUND

Several times, to get better walking, we had to cross the stream by means of felling trees and for the best part of the day left the river altogether, making a shortcut over a mountain. From the summit of this we had a splendid view of the mountain ranges hereabouts. They are not of a kind to excite any keen desire to tackle them. The landscape appeared but one mass of peaks, not a round top in sight, and as to any level land, not the most active imagination could conceive such to exist. But what gave us fresh heart was a tiny glimpse of our lake. We never had any doubt that it was other than Buttle's. So down we went towards it, but not without one slide more than we wanted, which broke our rifle short off at the stock and nearly collapsed one of the party. Sometimes, to get down a sudden drop, we would lower the packs one by one and then follow as best we could, but what helped us most were the deer trails, which, so far as they went, we held to tenaciously. By Buttle's Lake we stood and a noble sheet of water it is, twenty-five miles in length, surrounded by scenery of a very high order.

Then we began seriously to consider how far we might be from the foot of the lake and whether our party were likely to be there to meet us. With our elongated pistol, we fired a salute, but no reply came, so we decided to build a raft and make our way down the lake as best we could. We had neither rope nor nails, but the axe men within twelve hours had a craft ready, five logs held together by two cross pieces dovetailed in. On it we put our belongings and then swished our way along the edge, poling where the depth would permit, with young trees for poles.

We found that we were about three miles from the foot and to get there, had to round a sharp promontory, which causes the outlet of the lake to look almost like a funnel. At first the water was very calm, but just as we reached the point, a strong wind, common to these mountain lakes, sprang up, which soon threatened every moment to break up our craft. But we conquered and reached calmer

waters, soon reaching the foot where Campbell River commences its headlong rush to the sea, and jumping ashore, found no sign of our men or the now much-needed provisions.

INDIAN SHACK AND TOTEM, NOOTKA, WEST COAST

We saw at once the gravity of our situation. There was no food behind us; our rifle was broken, so there was no chance of food around us; and there was a clear four days' tramp at the very least to the east coast, where we might find a settlement. We had supplies, by living very frugally, for two days, so there was no time to lose, and the decision was at once reached to leave the lake and push on down the river bank, till we either met our party or, starving, should reach the coast.

Hunger ahead made our steps the faster and had we not met with an opponent in the river, we should have made a record in that day's tramp. Within a couple of miles, we came to where we either had to cross the river or be blocked for good. We had no knowledge of the river's depth, but we could tell it was very swift. We straightway essayed to ford it, the greatest danger of the trip. With packs high up and a long pole each, we walked in, clothes and all, and got a third of the way across, when we saw that the depth ahead would be over our heads, and swimming was out of the question. Now began a fierce struggle to keep our feet. The strain of the stream

against our legs was tremendous, as the order was given to return. Easier said than done. To turn was the risk, and only by inches we managed to face the other way. A sorry crowd we looked, as we came up out of the river, sadder but wiser men.

We camped on the spot and dried out as best we could, eating there our last piece of bacon, then turned to making a second raft. This was six slim poles tied together with bark, for time was short, and the next morning we committed ourselves to this wondrous craft and turned out into the torrent.

The few minutes that followed were very lively and it was a question whether we should land where we wanted on the other side or be carried down to a rapid below, to be broken up by the rocks. But we won against all the effort of the river, and then hurried on, only to find ourselves again baulked by the land two miles below and the stream again to be crossed. This time we found an old cedar log lying handy, and cutting it in two, dovetailed two cross pieces and within an hour were ready for a second attempt. This was, of a truth, a most rickety concern and only hungry men would have launched forth upon it. It requires an adept to ride one log, and certainly it takes skill for three men to ride on two.

We reached the other side in safety and took to the woods again, pushing our way through a very bad country of underbrush and swamp till, tired out, we halted with a heavy rain pouring down upon us, close to the head of what is known as the Upper Campbell Lake. Here we cooked our last meal, reserving just enough to give us a bite in the morning.

With determination in every step, we set out early to make our way down the side of the lake as far as we might, before building a fourth craft, and had not gone much over a mile before the usual baulk came. Here we thought it just worth while firing a signal, so loaded the elongated pistol once more and let it go, when much to our delight, we heard an answer come bounding across the water and knew that our men were awaiting us.

They had been camped for a week past, and had not reached the foot of the lake for the simple reason that they could not find the way. They attempted to ascend the river in a canoe they had brought with them, but this quickly ended in disaster; they tried the mountains to the south, but these threw them too much off course. They finally decided to wait where they were, surmising that we would do just what we did and so fall in with them.

After a rest and refitting, both parties returned to Buttle's Lake, passing through a splendid elk and bear country, where beaver live in plenty. We found our two-log raft gone, so hewed out a three-log one and had a spirited time making a double crossing. Then we reached the six-pole craft, which had been staked more securely. Here the cook of the first party came to grief, for in endeavouring to hold a branch that hung over the stream and might help to bring us more quickly to land, the man, his pole and the branch got hopelessly mixed together, and all three took a thorough bath. A big fire soon made things right for the man and a couple of miles' tramp brought us all to the foot of the lake.

Here we found what we had not had time to notice or think of before — a small canoe with one paddle. This was most fortunate, for it would just hold three men and would obviate the tedious work of poling a raft for over twenty miles. The dug-out had been left by a party of surveyors who had touched here some years before, in staking a line for a railway grant.

DEVIL'S CLUB PLANTATION

CONUMA PEAK, CENTRAL CRAGS.  
ALTITUDE 5,600 FEET.

We found the lake full of trout, but had no time to wait to make a record catch. The next morning, early, we saw the men who had come from the east coast off down to their old camp, and so home, then took our places in the canoe and started once again by ourselves, this time to reach and cross the very center of the Island. We had cut two paddles out of a handy log, so none were idle.

The lake runs generally due north and south, though it winds considerably, and about four miles from the head, takes a decided turn to the southwest. It is the peer of all the Island's lakes in its scenic beauty. Backed on both sides by high mountains, snow-capped and rugged, it has a lower range still closer to it, covered in most parts with fir to the water's edge. Scores of waterfalls pour

down on either side, and the streams which feed it are almost numberless. There are no islands in it, save three small rocks, the largest of which is hardly fifty yards long.

As we paddled on, we could see a mass of peaks and vast banks of snow, looming directly in our course. These are the Central Craggs of the Island and it was well that we had our larder full, as we faced the real object of the trip. Beyond those, and exactly where we knew not, there lay Great Central Lake, where our second party was to meet us, and might even be now.

White men and Indians in plenty have been on Central Lake, and some of each on Buttle's, but between the two lay those Craggs, which had been left most wisely alone, but which we now had to tackle.

We rested at the head of the lake for the night, then caching the canoe, threw on our packs and faced the mountains once again. A river ran down towards us, heading from the way we planned to go, and at once we had to decide whether we would follow up the valley or climb up to the top of the ridge, thence going parallel with the stream till some other guide turned up. We chose the latter, and it was well that we did, for another day's work brought us to where the river started and had we followed in the valley, there would have been a veritable trap for us, since a gleaming glacier blocked the way ahead, while precipices hemmed in the water on either side. So up we went, finding very fair travelling. The timber was open and the moss held us well, but the ascent was steady the whole live long day, with never a dozen yards of level. Our lunch was taken in a spot where it required the greatest care to prevent ourselves and food slipping downhill. Then we came to a dry watercourse, which we stuck to for a full thousand foot climb and noticed all the way an abundance once more of marble, but no game.

MUCHALAT ARM INDIAN WOMAN AND BABY, NOOTKA

Just before sunset, we gained the top and now had little difficulty in seeing how to reach the Central Craggs. There was nothing but snow everywhere, save stunted trees in little groves here and there. We were on a great backbone which ran straight up into the Craggs. These latter form a most perfect crescent, like a quarter moon, and to reach the center one, which rose like a pyramid into the sky, we should have to keep on our ridge and spend a couple of days in a truly Arctic scene. We had no means of telling the depth of the snow beneath our feet, but that it ever allows the earth to see the sun is a thing impossible. Whichever way we looked, we saw streams tearing off to disappear round some lower range, and glaciers were on every side.

Looking about for a night's shelter, we espied a balsam tree, and cutting off its lower boughs, crept under its remaining limbs, each lying in his own blanket, with toes to the trunk and head resting on some portion of the larder.

The cold drove us out early, and we were soon on our way along the backbone, with a tremendous drop steadily increasing as we mounted higher and higher. The usual quota of lakes were to be seen feeding the streams, and now we commenced to see very clearly the immense fissures in the banks of snow that fill up every crevice in these crags. We hoped sincerely that none such would lie across

WHERE FLOATS THE UNION JACK ON GREAT CENTRAL LAKE

our path. At noon we took observations and calculated that we stood at the time in the exact center of the Island. To signalize the event, we took our two flags and determined to leave them there, floating before every breeze. To do this, we found a small clump of balsam trees very handy, and swarming up the tallest, squared off the trunk near the top, lopping off the branches, and then using some extra bootnails we carried, nailed the flags to our improvised mast — one for loyalty, the Union Jack; the other to show from whence the three had come, the Stars and Stripes. There we left them and unless some untoward collapse comes to the little clump of stunted trees, there they may hang for many a day.

Then we pushed on to yet higher ground, and when we halted for lunch, we were fairly amidst the Crags and right below the central peak. But now two visitors appeared, one most unwelcome, the other most effective. The latter was a goodly band of deer, which came tripping across the snow from round a

neighboring ridge as soon as our campfire was lit. Their curiosity could not seemingly be satisfied, for they came within fifty yards and stared hard and long. We had left our stockless rifle behind, so could only enjoy staring back, which there was certainly ground for, since it is a rare sight to have seven bucks, all sleek and antlered, pay a camp a visit in the daytime. The unwelcome visitor was fog, which came rolling up behind us, and in an hour just shut us in as completely as if we were within prison walls. We could not see a dozen yards ahead, and to attempt to advance under such conditions, in a new country with dangers on every side, would have been madness. So we made the best we could of our very limited quarters and hoped that the morrow would release us. But no such fortune, for all the next day we were enveloped in the fog, and had to while away the time as best we could. Every little while, day and night, we could hear avalanches of snow breaking away and thundering down the ravines. The roar of artillery is nothing to it, and we were thankful that from the configuration of the crag, there was little chance of the like happening to our position. We had another visitor during the day in the shape of a ptarmigan, with its brood of young ones; otherwise, we were made to feel that we were prisoners and might be for days longer unless a north wind sprang up — which happily it did late in the afternoon, and the following morning the sky was clear and beautiful.

Then we sallied forth and began a stiff and difficult climb. We might have slipped in between two of the great peaks had we wished, and so proceeded without further delay, but we were anxious to stand upon the summit of the center crag and see what might be seen.

BUTTLE'S LAKE

And we were well rewarded when we got there. Once up, there was a bird's eye view of the whole countryside. But what pleased us most was the fact, hitherto unthought of, that both the great lakes could be seen at one and the same time by human eye, otherwise than in a balloon. Sure enough, there was Buttle's Lake winding its way through the mountains, and its foot especially clear, while Great Central Lake lay in the distance, running east and west, with just a portion of the headwaters discernible. It looked not more than ten miles off, but with a hard country between. We had started out with the belief that the lakes were a long distance apart, so we were agreeably surprised to see our goal so near. Below us, some three thousand feet, we could see a lake of ice, and below that, another smaller sheet of open water. At our left was a ravine fast jammed with snow up to where we stood, which forms the river that feeds the lakes lying to the north of Great Central. In the far distance was the range with Mount Arrowsmith as lord and king, whilst to the south there rose the range growing every year more famous for its gold, and guarding to the ocean, the lovely Alberni Canal. It was a sight worth all the way we had come, and we lingered long before bracing ourselves to the effort of passing over the crest of the crescent and leaving Central Crag behind us.

Down we went on the run, not a straight one, often exceedingly tortuous. Hour after hour slipped by and yet we had not reached the ice lake. At last we were baulked every way by rock, save one means of egress, a snow slide over half a mile in length. The chances taken were great, for a slip meant a general smash up at the bottom among the rocks which surround the lake, but necessity has no choice,

so we took the chances and went straight down, without mishap, to the broad sheet of solid ice. This crossed, we saw a pass, still of solid snow, between two mountains, which seemed in our line of march, and followed it till we came to a deep ravine that cut clean across our path. There was nothing for it but to go down and clamber up the other side, and we should be fortunate if this was the only one that lay across the way. The entire lack of symmetry or decent length of range, in the middle portion of the Island, is the cause of valleys running in the most unexpected fashion. A lovely glen we found when we reached bottom, positively clear of undergrowth, broad and well grassed. Here we camped, leaving the ascent to the morrow, which we thought might possibly see the meeting of the two parties, if all went well.

The first thing to do was to attain the grade we had left the previous afternoon, and after an hour's stiff climbing, using the snow whenever we could, we were in the line of our pass again, and could see the lake clearly. The rest of the hours were spent in going downhill. Greater care is required on the whole in going down than in climbing up a mountainside. Many a long detour has to be made to reach a lower level of only a few hundred feet. One more snow slide helped us greatly and then we bade farewell to the snow for good. Then we took to a waterfall and let ourselves down hand over hand amid its waters and boulders, till a sheer drop stopped the way. But here we reached open timber and made our way along a rushing stream heading in our direction. Once we were forced to fell a tree and cross the water, and again and again fought a stern battle with the rank underbrush, but at last, on August 10th, we came to the flat lands of the lake's head, and breaking through the brush and devil's club, came out directly upon the snug and well supplied camp of our expected party, as its fishermen were leisurely adding to their catch of trout for the day, giving us a couple more days before putting in an appearance.

That appearance would not do for the streets of a city — clothes had suffered more hardships by far than the men in our eighteen days' tramp and climb — but what cared we for looks, seeing that we had accomplished the purpose for which we set out, and had stood on the summit of the Central Crag, laying bare to future generations the unknown midst of Vancouver Island.

*W. W. Bolton and J. W. Laing.*

### III. Great Central Lake and the Alberni District

The delight of a traveller is great when, after days of journeying and keen expectation, he first sights a long-looked-for object. Such were our feelings on reaching the head of Great Central Lake. This is an ideal spot for a month's sojourn, where the tastes of the artist, the hunter, the fisherman and the mountaineer can be gratified to the fullest extent, the only difficulty being its inaccessibility. The trout fishing is superb. Two mountain streams flow into the lake, and where these mingle their flood with its waters, innumerable trout were seen, running up to six and eight pounds. We captured fifteen before breakfast, the smallest weighing two and the largest four and a half pounds, and delicious eating they were, pink-fleshed and firm. This spot in the month of May would be a veritable anglers' paradise.

Great Central Lake is, as the name would somewhat imply, the largest in the Island, and we computed its length at thirty miles. At its foot, Mount Arrowsmith stands guard; at its head, Split Mountain. Between these two sentinels the lake twists and turns, and its course is so devious that it is difficult even to discover its general direction.

INDIAN ROCK INSCRIPTION, ON GREAT CENTRAL LAKE

The scenery here has lost its grandeur. There are few bold precipices of rocks running sheer to its edge, no waterfalls dashing and hurling themselves from giddy heights. Its low hills are thickly covered with timber of no great size, and we missed that majestic background of snowy mountain peaks, which, in the north, is one of the chief sources of beauty.

Three miles from the head of the lake, facing south-west, we came quite by accident upon a curious hieroglyphic inscription, deeply engraved upon the

face of a sloping rock. Its antiquity is undoubted, from the worn surface of the cutting. What it represented, it would be hard to say. Suggestions were hazarded of music, slaves, fish, trees, logs and seven-branched candlesticks, all combined — the last-named naturally coming from the brain of the reverend member of the party. The rock was photographed and a sketch made, and the Alberni Indians were consulted on arrival, but they were unable to elucidate its meaning. The sketch was forwarded to Professor Franz Boas of the Smithsonian Institution at Washington, who is perhaps as deeply versed as any man living in Vancouver Indian lore. His opinion is that it is identical in age and character with one he saw on Sproat's Lake, and is probably the work of an extinct race of Indians, who were known to inhabit this lake a century and a half ago.

If it is desired to interpret the records of this particular tribe, it is necessary to be familiar with all the features of their life. The various tribes of the west coast of the Island attribute all their carvings to their deity, Quotiath, but they are unable even to guess at their meaning. As a matter of fact, all the lakes of the interior were visited by Indians at the time when they fasted and prayed in the wilderness, until they believed spirits appeared to them. It is also known that several tribes of the Pacific coast left records of such events on rocks, either painted or sculptured. The traditions of the Indians of Vancouver Island often refer to revelations made at their lakes, particularly those above the Nimpkish River, but it is also known that one clan of the Nimpkish had their villages in early times very far up the river.

BRIDGE BUILDING ON THE ROAD TO MINERAL CREEK, ALBERNI

Professor Boas thinks it is impossible to tell for certain what the carving means. It may represent a canoe with thwarts, but that would hardly explain the central slanting bar, or it may be a tally or a record of a certain number of feasts. Mr. Joseph McKay<sup>124</sup> of the Indian Office in Victoria, British Columbia, is of the opinion that the inscription is in commemoration of the dead, whose remains had been deposited in boxes on a tree from security from predatory animals. The tree was probably burned by forest fires, with the boxes and their contents, and the nearest relatives adopted the plan of keeping their friends in remembrance by carving this inscription on the site of the tree.

Each box was represented by double lines; the cross beam was lashed to the tree by withes<sup>125</sup> and supported a stage for ladders, as the latter would not reach the sites of the higher boxes from the ground. In the course of a paper read by Mr. McKay before the Natural History Society of British Columbia, he called attention to the condition of the Indian at the period when these marks were probably made, and to certain strong points in his character and habits of thought, which even now are still prominent, and may readily be observed even under his present altered surroundings.

The Indian [he said] is but little hampered with conventionalisms; he is a creature of circumstances. His movements are mainly actuated by expediency, and in carrying out his objects, he applied to his use such means as may be most conveniently within his reach. If he be in want of food and have neither arms nor fishing tackle, he will kill grouse by throwing stones at them, or drown the marmot out of his hole by leading water into it, or failing a water supply, he will smoke the animal out. If he have water to cross and no suitable vessel to carry him over, he will construct a raft of dry wood with willow or cedar withes and cross on that, or in the springtime, when stranded floes of ice abound along the shores, he will push one afloat and use that to take him over. He shows great regard for his deceased relatives and reverence for the dead in general. He believes that the souls

<sup>124</sup> [Joseph William McKay \(1829–1900\)](#). WWB has *Mackay* here and below.

<sup>125</sup> *Withes*: a slender, flexible branch or twig

of the departed haunt the localities in which their bodies are sepulchered, that those of his enemies, if angered by the desecration of their remains, might cause him untold injury, and that the souls of his friends, if their mortal remains be neglected, might fail to assist him in his daily vocations, as he believes they do when they are not offended.

FALLS BELOW SPROAT'S LAKE

Before suitable implements for burying were obtainable by him, the Indian deposited the remains of his departed friends where they were least liable to be disturbed, sometimes on a high scaffold at the crest of a bald promontory, at other times in a canoe on a bare, rocky islet; failing these, a well-grown detached tree with all but the lower branches removed and the top lopped off was used. The body immediately after death was folded and bent so as to fit into a box about thirty inches in length; the more wealthy Indians sometimes cleaned the skeletons after the flesh had decayed and placed the bones in a smaller box; sometimes the bones of several Indians were placed in the same box. Banners of colored fabrics were hung at the cemeteries to distinguish them and thus prevent desecration. The Indian loved to commemorate important events in his life by certain marks or monuments, the meaning of which would be handed down traditionally by his descendants until these last were all extinct or had removed to other parts of the country; rude figures painted in red ochre on the faces of sheltered precipices, pyramids of deer horns and bones where a great feast had been held, arrows in the clefts of rocks where a battle had been fought — all these are instances of this habit.

Under their early conditions, few families existed in direct line for more than three or four generations; murders, raids, intertribal wars, epidemic diseases and starvation caused a constant change amongst the leaders of the different bands; sometimes a band would be

starved out by being prevented access to their fishing and hunting grounds by the enmity of powerful neighbors.

Whatever the elucidation of this rock inscription may be, it was an extremely interesting discovery and numerous inquiries from anthropological, antiquarian, and royal societies in Europe, America and Austral-Asia have been made recording it.

The totems of the Vancouver Indians are everybody's wonder, and their history is interesting and instructive.

When a child is born, a bird or beast is given to it as a guardian angel. The name of any animal which the child can pronounce after attempting to talk, or, when crawling about, the first bird or beast that crosses its path, is given as its totem. These names which one at a time become the child's are often of a common character. When the child is old enough to save money and acquire property, these treasures are passed over to the chief of the tribe as a gift. At such times, the members of the tribe assemble at a great dance, and the chief presents the child with a new name, and a higher rank, and a crest as a distinguishing mark of it. This usually happens to a girl in her teens. The mother invariably has a crest which she transmits to her child.

The father's crest, on the other hand, goes for nothing and is never perpetuated. This custom goes back beyond history or tradition, probably thousands of years. If a man builds a house after taking to himself a wife, he pays ten blankets for the beams of his roof, and ten for the totem posts. The carver is paid ten blankets for every fathom of their length, so that a totem post of sixty or seventy feet costs a considerable sum. If the builder be a bear, a bear ornaments the lowest part of his totem; above that are carved the husband's crest or that of any secret society to which he belongs. Then comes his wife's, and to top them all, her phratry or brotherhood, usually some bird, the raven or the eagle.

The totem post is literally the family tree; it reveals to the Indian, at least, who is versed in the secret of its heraldry, all the life history of the family whose dwelling it adorns, and it may have some connection in its origin with primitive tree worship.

In the fantastic totem post of Alert Bay, the lowest figure is supposed to be the head of a fish; on top is the soaring figure of an eagle. We learn from this that the owner of the house to which it is attached came from a fish, then took to himself a wife from the eagle tribe of mankind. Then reading downward, we discern that the eldest son of the fish and the eagle married into the whale tribe, and so on up to date.

To illustrate the use of charms by the Indians, when we were at Friendly Cove on Nootka Sound, we were told by the Reverend Father Brabant, who has lived for twenty-six years amongst the West Coast Indians, of an old Indian woman who had died and, as is customary, was put into a box made of cedar planks and then taken to a cave close to the village.

It may be here remarked that the Nootkas differ to a certain extent in the way of burying their dead from the other tribes of the coast. Nearly all, if not all, the other tribes squeeze the body while it is still warm into a box, then hoist it on the branches of trees or some prominent rock or island, the idea being that of respect for the dead to prevent wolves or dogs from feeding on the corpse.

The Mowachats — often called Nootkas by the whites — however, have close to their village a cave which they use as burial ground, and it was in it that the body of the old woman was placed. That she was really dead when placed there is not quite certain, for last year a young woman was supposed to have died in childbirth. She was put into a box, and the next day an old Indian heard her crying and

groaning in the recesses of the cave, where she had been laid to rest. Very few of the Nootkas die in their houses; they are put out of the house and are, in many cases, allowed to perish in misery.

FLUME OF THE DUKE OF YORK MINE, ALBERNI

But to return to the old Indian woman. The day after her death, three Indians, the leader being Chief Maquinna,<sup>126</sup> stealthily entered the ‘Cave of the Dead’. They broke open the box used as a coffin for the old woman, and then and there proceeded to cut some choice pieces from her chest and other parts of her body, and having accomplished their work, retired as noiselessly as they had entered, each one to his own place — let us call it, for want of a better term, that of *private devotions* — which Chief Maquinna, and he is not the only one, has in the bush, where he keeps his ‘charms’ and repairs from time to time, especially in the winter season, to pray and worship. There he keeps the skull of many an old warrior, a mighty hunter, or medicine man, and holds converse with them as though they were alive, ordering them to grant him victory over his enemies either at home or abroad. He asks them to give him an abundance of whales, sea-otters, and bearskins, and prays for a long life and everlasting exemption from sickness.

<sup>126</sup> Also spelt *McQuinna*. The namesake of the Nootka chief during WWB’s visit is [Maquinna](#), who was the chief of the [Nuu-chah-nulth](#) people of Nootka Sound in the late 18<sup>th</sup> and early 19<sup>th</sup> centuries.

Thus it was with a special object that he and his friends mutilated the body of the old woman. This custom is carried to such an extent that many Indians, seeing their end approach, ask their friends that they be taken away before death — the idea of mutilation after death being a thought too repulsive even for an Indian.

ALBERNI BRIDGE

Do Indians believe in the Unseen? Undoubtedly. But they are a mysterious people, and the more they are studied, the more convincing proofs they give that no white man has ever fathomed the inmost heart of an Indian. Indians believe in a Being who gives them food, to whom they pray, but in most cases they attribute to a man or woman — this is hereditary — the credit for the gifts obtained. So they have in Nootka a man who causes the presence of the herring and the herring spawn at the proper season. Another claims the honor, and gets the credit, of making the dog salmon approach and ascend the rivers.

Indians believe in a future existence after death. We were told of a young man who caught a sea-otter and attributed his good luck to his mother, who had died a short time before; this he told at a feast in the presence of the whole tribe. An old medicine woman is known frequently to enter the 'Cave of the Dead' and to have been heard distinctly to ask one or more of the dead there to be found, to cure a little boy who was very sick, and whom she was by her superstitious practises trying to restore to health and happiness.

The marriages of the Nootkas are, as a rule, arranged by the parents of the young people. The boys are married as young as fourteen or fifteen; the girls, as soon as they reach the age of puberty, some of them before thirteen. A girl whose mother and father are alive is preferred to an orphan, yet the

mother-in-law is as objectionable an article as with the whites in many cases. But the Indian is essentially a speculator. Therefore, the parents of the young man are in favor of a girl whose parents are alive, because they argue that these parents will continue to support their daughter by giving her presents, clothing and other useful articles.

INDIAN RESERVATION, ALBERNI RIVER

The marriage ceremony is preceded by gifts of money or presents, but it is not a real bargain; that is to say, an Indian does not really buy a wife for his son, as is sometimes supposed. The money and presents are a mere show, to prove that the candidate is in earnest. They are also a means of flattery, as the greater the chief whose daughter is asked in marriage, the more numerous are the presents, but when the girl is given up in marriage, all the money and the presents are returned sometime or other, or other presents are substituted. So the gifts are virtually a matter of ceremony.

Indian marriages are not indissoluble, although the Nootkas seldom separate, especially if the union is blessed with children. Polygamy is becoming rare and only three follow that custom in Nootka at the present time, Maquinna being one of them.

These people relate many interesting facts about the presence of the Franciscan Fathers in their midst over a hundred years ago. They sing several of their hymns in Spanish, describe the celebration of religious feasts, such as Christmas, and give numerous details about the Spanish settlement towards the close of the last century.

The Reverend Father Brabant has spent the last twenty-six years of his life in Christianizing and raising the status of the inhabitants of Nootka Sound, and is much beloved by them. In his opinion,

they are extremely backward compared with the other reservations on the Island. This is explained by the fact that they are mostly old men and women, and with such people much progress cannot be made. They have very few children, and the latter are decreasing all the time. Consequently, after a couple of generations, comparatively few of them will be left.

Our journey from the head to the foot of the lake was made pleasantly enough with the advantage of a dead calm, and we reached Stamps River, which flows out at the foot, nine hours after the start. This river soon becomes the Alberni River, and nearby is a lagoon, where we bade goodbye to the water and made for the woods, striking a rough trail of four miles, which brought us to Sproat's Lake. We had now reached the outskirts of civilization, and it was a pleasure, after a satiety of wilderness, to see at last some arable land and tread firmly on an actual road.

This lake is very irregular in outline, like a long arm and a short one crossed, twenty miles in length, surrounded by low hills with their ubiquitous firs, higher ranges standing some distance back. Excellent fishing is reported at the head and foot.

Alberni is a busy place, for it is the center of both a mining and a farming country. It lies at the head of the canal of the same name, and besides its easy approach by water, there is a wagon road all the way to Nanaimo, a distance of fifty-four miles, over which a stage runs weekly. It also possesses telegraphic communication with the outer world, has its hotels and stores, its wharf and school, and a young Presbyterian 'holds the fort' religiously. Here, also, is an industrial school for Indian children, and civilization has reached the present day culminating point in that the 'bike' has its ardent followers.

The Alberni River is a lovely stream, finding its placid way amid much arable land, and giving the nascent town the purest of drinking water. What with the farmer and the miner, the woodman and the orchardist, the fisherman and the cattle dealer, there is a great future before Alberni, and before long will be seen the entry of the iron horse, and those silent forests will resound with tramp and yell.

While up to a few months ago the Kootenai mining district monopolized the attention of outside capitalists, it has gradually become better known that on Vancouver Island there is mineral wealth that will call equal attention to it. It was uphill work for Kootenai to gain its just recognition, and so will it be for Alberni. Extensive development work is being done of mineral claims in the district, a large area of which is threaded by veins carrying gold, silver, and copper. The indications from surface rock are very encouraging, while the accessibility of the claims — many being on deep water — cheap transport charges, an unlimited supply of coke, abundance of wood and water, and mild climate throughout the year, are advantages not to be lost sight of by the mining investors.

We paid a visit to the Duke of York hydraulic claim on China Creek, which is worked on California principles. Near the upper end, a dam has been built, and the creek water directed into a flume, a mile and a quarter long, to a pressure box; the water then passed through a twenty-two inch pipe, seven hundred and fifty feet long, with a fall of one hundred and forty feet, and is delivered through a seven inch monitor <sup>127</sup> with force equal to 418 horsepower. The flume is a most interesting specimen of engineering skill. At the upper end, the entire structure is supported on chains driven into the face of the bluff (called bracket work) at a distance of one hundred and twenty feet, about thirty-five feet above China Creek. Three hundred and fifty thousand feet of timber were used in the construction of the flume, which is six feet wide and three feet deep. There are only three of the same kind in California. One at the Pliocene Mine and Cherokee in Butte County, another at the Milton Mine in

---

<sup>127</sup> Nozzle

Nevada County, and a third at the Irrigation Ditch in Southern California. With water power such as this in a California mine, a vast fortune could be made. The large Le Grande Company in Trinity County is building a ditch twenty-eight miles long to bring water to their mine, tunneling a mile through the mountains.

COPPER MINE ON THE SARITA RIVER, AT THE MOUTH OF THE ALBERNI CANAL

The tramway for timber deserves a passing notice. It is built on railroad principles, set in ties with three rails; in the center of the tramway is a space of sixty-six feet, which has four rails to enable the cars to pass each other, the entire work being done by gravity, the loaded car down taking the empty car up. Forty thousand feet of reserve lumber is stored there. Another interesting feature is the derrick used in moving boulders and stumps of trees. The boom is adjustable to the maximum length of ninety

feet, and for our benefit a rock of six tons was dumped into a creek, a distance of one hundred and eighty feet, with the greatest ease. This is operated by water power and is in the charge of one man. About thirty thousand dollars have been spent on this property.

The capacity of the flume is six thousand inches, and it is intended to work two monitors with which to handle twenty-five hundred to thirty-five hundred cubic yards of gravel daily.

ALBERNI NEW TOWN WHARF

The creek has been worked by Chinamen — hence its name — in their primitive way for years, and the fact that they are anxious to return indicates that the supply of gold is not yet exhausted. Owing to a disastrous fire last year, in which the boom of the derrick was destroyed, working operations have been much retarded.

There are other placer claims on China Creek, notably the Cataract, upon which considerable outlay has been made, but through loss by fire, the company has not been in a position to commence working operations. Arrangements are now being completed in England to make another trial of the ground, and if these prove satisfactory, the mine will be taken over by an English company and work resumed on a larger scale.

The vein of the Alberni Consolidated Mine on Mineral Hill, in which Mr. James Dunsmuir <sup>128</sup> is largely interested, has been proved to be large and rich. A three-stamp mill has been erected on the creek, and a road two miles long built, connecting the mine with the mill. A trial test of fourteen tons of the ore put through lately gave \$529.40, which is thirty-eight dollars in free gold to the ton, leaving out of the question the concentrated, which would add sixteen to twenty dollars more. It is

<sup>128</sup> [James Dunsmuir \(1851–1920\)](#)

contemplated to put up a twenty-stamp mill. Mineral Creek will be connected this year with Alberni, on seawater, by a fine wagon road, so that communication for shipping is excellent.

The Gold Eagle gold quartz lode is one of the most promising of all the Alberni mines, and is situated at the head of China Creek, about sixteen miles southeast of Alberni and thirteen miles from the mouth of the creek. It is now bonded to Lord Fingal and a London syndicate. A general sample of the ore has given an average of \$8.26 in gold and 36 cents silver per ton, across seven feet of quartz.

NEAR ALBERNI

King Solomon's Mine is a valuable mine on the sky; its is hard to reach, and tests the powers of a mountaineer. The trail starts from McQuillan's cabin in the basin, and is like walking up the side of a house, ascending zigzag to the height of twelve hundred feet to the snowline, thence up the snow for eight hundred feet, the tunnel of the mine being situated three hundred feet below the top of the divide, facing due north and running north to south. Latest assays of the ore give an average of seventy-seven dollars in gold to the ton, the nature of the ore being refractory, composed of pyrites, galena, gold and silver. The situation of the mine is unique, lying fully thirty-five hundred feet above the sea level. The view from the top of the divide is unequaled. Facing you south are the Hiwatches Mountains, with grand snowy peaks; to the west, Mount Douglas, 4,245 feet in height, and McQuillan Peak, 4,200 feet; to the east, Mount Saunders, 4,800 feet, and Hansen Heights. Mount Douglas, from all accounts, promises to rival Mineral Hill in mineral wealth.

We also visited the copper mine on the Sarita River, which flows into the Alberni Canal. This is a large vein, 275 feet wide, which runs into a mountain a mile and a half from Barclay Sound. It is naturally exposed by the Sarita River for its full width, and the owners have uncovered it in half a dozen places along the base of the mountain. A tunnel has been run into it, extending 170 feet, at the end of which it is intended to crosscut the ledge, which will give a good idea of the class of ore existing. At the river's edge, the ore assays from five to twelve percent of copper, from one to six

dollars in gold, and from two to sixteen ounces in silver. The ore in the tunnel is believed to be the cap of a huge copper lode, and a shaft has been sunk near the end of the tunnel, a hundred feet. The ore along the edge of the Sarita River cannot be distinguished in appearance from that of the best Rossland mines. On Santa Maria, Copper Island and Uchuckleset Harbor, <sup>129</sup> there are large croppings of similar ore, of which discoveries have lately been made.

The wharf at the new township of Alberni has been completed during the past year by Messrs. Waterhouse and Penny at the head of the navigation on the Alberni Canal on Stamp Harbor, there being a depth of twenty-four feet at dead low water, thus giving every accomodation for freight and passengers. A road has been made to the settlement of Alberni on the river a mile and three-quarters distant, and an appropriation having been asked for, it is expected that the new trunk road connecting the wharf at the town site with the Duke of York Mine, which is so urgently required, will be taken in hand and completed at an early date. This will shorten the distance to all the mines to a considerable extent, and reduce the cost of getting in supplies, owing to the easy grades and deep water facilities. The harbor is one of the finest on the Pacific coast.

The Alberni Canal has a wonderful charm about it. Bounded on each side by high mountains, its course is tortuous and narrow, but extraordinarily deep. There is a Hell's Passage in it, well named, for here is the narrowest part, where everyday the wind whistles and howls and the tides tear through at furious pace.

Then the waterway widens out as it becomes Barclay Sound, and far away we can see where the sound becomes the ocean, and reaching it, we float on the broad bosom of the Pacific, to where friends and acquaintances welcome our return to civilization.

*W. W. Bolton and J. W. Laing.*
